**Syria / Human Rights / Humanitarian Access / Health**

**Editor’s Note**

It was an extraordinary week of Security Council meetings focused on Syria, the Middle East, humanitarian access, continued bombing and other attacks on civilians, humanitarian and health care workers, and health facilities. We provide below selected transcripts and links to video of selected statements made at these meetings, and also refer you to the United Nations section of Agency Watch below for additional content.

**Syrian Arab Republic: Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator, Stephen O’Brien Statement to the Security Council on Syria**

New York, 29 September 2016 [EN/AR]

*Mr. President,*

Thank you very much indeed. Where to start? It is with raw grief, with dismay, intense sadness, frustration, and an unquenchable anger at the excess of sheer and unbridled horror – way beyond even the apex of horror of a fortnight ago – that I report today to you, the Security Council, on the ultimate humanitarian shame that is Syria today, and in east Aleppo in particular. The people of Syria – and most immediately, the people of east Aleppo – are being subjected to deprivation, disease and death in increasing numbers and with increasing ferocity. This is not an unforeseen result of forces beyond our control. This is due to the action of parties to the conflict and it is the direct result of inaction – be it through unwillingness or inability – by the international community, including most notably those present in this chamber.

It is now a legitimate question to ask whether there is any level of disaster and death that can be visited upon the Syrian people that might prompt the parties to this conflict, and by extension the international community, to identify a red line that will not be crossed. This is not a distant conflict in which we as a community have only a passing stake – this is a critical test of the capacity and willingness of those in this chamber to make a decision and take action. To manifestly uphold the words of the Charter of the UN to which all nations are bound: to save the Syrian people from the scourge of war.

*Mr. President,*

The last seven days have seen an intensification of attacks across the country. From airstrikes in Deir ez-Zour, to airstrikes and ground attacks in Aleppo, Hama, Homs, Idleb and Rural Damascus and other governorates, fighting has intensified despite a one-week lull when the cessation of hostilities was reinstated, albeit with violations on all sides.

Nowhere has the fighting been more intense in the last days than in east Aleppo...

*Mr. President,*
As you heard me say before, there are few words left to describe the horrors for people living under siege. Theirs is a daily struggle for survival as they remain trapped and beyond our reach, subjected to collective punishment. This revolting situation in east Aleppo must, please, be the SOS, the Mayday call, to the international community, that they meet the criteria for besiegement, including: (1) being militarily encircled; (2) a lack of humanitarian access; and (3) lack of freedom of movement for civilians is clear. They now do - it is now besieged east Aleppo.

This is not based on conjecture, but the facts on the ground that I have just reported to you. The area is militarily encircled by Syrian forces. In addition, armed opposition groups continue to conduct military operations from within the city, placing those trapped within the city at greater and continued danger. Despite all our collective efforts which have been discussed in great detail in this Council, there has been virtually no humanitarian access through cross-border or cross-line actors since early July. It should be noted that this is as result of constraints by both the Syrian authorities and non-state armed groups. Furthermore, despite the assertion of there being “corridors” available, civilians wishing to travel in and out of eastern Aleppo are unable to do so in any significant numbers. You’d do the same, you just don’t do it if you have nowhere to go voluntarily, and if the sniper is likely to take the shot any way. As we have long said, civilians cannot move when there are such levels of insecurity. We have also assessed this lack of movement based on the military presence at entry and exit points and specific security concerns, not just about sniper fire and detainment when traveling through humanitarian corridors that were established by the Russian Federation. The status of another 275,000 people besieged in Syria is truly unconscionable; we all must do everything possible to bring this medieval practice to an end once and for all. This means the number of people besieged in Syria has grown from 586,200 to 861,200, even after deducting the 4,000 who were required to leave Darayya as of late August. This is in addition to the millions of Syrians in hard-to-reach locations today.

Mr. President,
Besiegement is not a weapon of war; it is a flagrant, unjustifiable breach of the law – the law which the besieging parties have signed up to. As the Syrian people struggle for survival and a political solution remains out of reach, the best that communities under attack can immediately hope for is the indiscriminate attacks to stop and that humanitarian assistance can reach them. The role of humanitarians is not to be part of a political solution, but to provide food, shelter and the tools of survival to those in need, while that solution is sought. Those efforts – to protect the vulnerable, to deliver to communities in need, to step in to fill the gap where no alternative exists – were dealt a cruel blow last week.

After half a decade of conflict, it should not be necessary to explain to any party that the laws of war afford protection to humanitarian aid workers. In 2016, I should not have to brief this chamber on violence committed against those who are aligned to no side in this conflict, those who are willing to enter the most challenging environments imaginable to help those suffering beyond imagination. Yet last week, while leaders from around the world met to discuss the humanitarian crisis in Syria, we suffered a devastating attack on a humanitarian convoy...

Mr. President,
Syria is bleeding. Its citizens are dying. We all hear their cry for help. As humanitarians we are doing all we can. Last week world leaders came to New York, sat around this very table and met in ministerial level meetings, all with no tangible results. Instead, while the world leaders...
were meeting, violence actually increased – more civilians and more humanitarians were killed. It is time to place blame. It is time this Council stops tolerating the utter disregard for the most basic provisions of international humanitarian law.

So I call on the Council to act now, to do right by those who sacrificed their lives, and take whatever steps necessary to end this violence. The alternative simply does not bear considering. The depravity we see will only get worse. If the parties to this conflict won’t, then the world’s only hope is you: the collective, united will and measures of this Security Council. It is up to you to turn the tide, to create the conditions for aid to reach all in need. To end the sieges. To restore political dialogue. And to bring an end to the war.

Transcript
Speech by ICRC president addressing attacks on health-care personnel, facilities and vehicles

Excellencies, Ladies and gentlemen, Dear colleagues,
We met in New York exactly 149 days ago, for the adoption of the resolution 2286, which many of us appreciated for its clarity in language, commitment to International Humanitarian Law (IHL) and design of concrete follow-up.
In the five months that have passed since then, attacks on health-care personnel, facilities and vehicles have certainly not ceased.

The situation in many countries remains deeply alarming: in Syria for instance, on all sides of frontlines, health facilities and personnel regularly come under fire or are forced to close due to heavy clashes. Just a few hours ago, the two largest hospitals in Aleppo were reportedly attacked. Patients were killed. Medical staff were injured. And all across the country, many hospitals are no longer functional, leaving injured people with little hope of getting life-saving medical assistance. The violence, the disruption of electricity and water supplies and the lack of medicines have severely jeopardized access to health care.

In Yemen, one quarter of all health services are reportedly either destroyed or shut down, in a time when there are more injured people than ever. Just over a month ago, an MSF supported hospital in Hajjah Governorate was hit, killing 19 people.

And this is just the tip of the iceberg. The list continues: Afghanistan, South Sudan, Central African Republic, Democratic Republic of Congo, Libya, etc.

Unfortunately, the trends described previously, continue unabatedly. Neither did the behavior of actors on the battlefield change over the last couple of months, nor were belligerents seen to factor the humanitarian consequences more prominently into their military decision-making: health systems continue to disintegrate under the cumulative impact of violence, leaving millions of people in highly fragile conditions.

If we have not seen progress on the battlefield, at least here in the United Nations, the community of States has resolved to work on this issue.

Firstly, the ICRC is pleased to see the leadership of this Council reaffirming the continued validity of international humanitarian law (IHL) as the universally agreed framework for the protection of the wounded and sick and the delivery of medical care in armed conflict. We must remain confident and demonstrate through our actions, that even in the most trying circumstances, IHL remains relevant and can make a difference for people bearing the brunt of war.

Secondly, specific recommendations and measures for the protection of health care in conflict are now integrated in official resolutions. At the Red Cross and Red Crescent International Conference, the resolution to protect health care in armed conflict was unanimously adopted. The Security Council unanimously adopted resolution 2286; 85 countries supported this. We now have a very solid foundation from which to promote such measures.

But obviously, much more concrete action is necessary.

The ICRC takes note with appreciation of the letter the UNSG addressed to member States following up the adoption of Resolution 2286 and delineating a clear road map for implementation. We appreciate having been consulted on the content of the letter and for the opportunity to input.

From our perspective, close to victims and negotiating humanitarian access with weapon bearers on all sides, and from the information collected through the Red Cross Red Crescent...
Movement's Health Care in Danger initiative, we believe that there are four areas where concrete measures must be taken:

First, on legislation:
1. States must strengthen domestic legislation protecting access to health care, as is their obligation under international law.
2. They must ensure that national laws recognize the role of first responders, often staff and volunteers from national Red Cross Red Crescent societies;
3. And States must do everything in their power to enforce existing legal sanctions so that they act as a deterrent.

Secondly, on data collection:
4. We encourage States and other relevant actors to set up national and international systems to collect and analyze data on the occurrence of violence against health-care personnel, facilities, medical transports and patients;
5. And convene multi-stakeholder meetings to regularly share challenges and good practices on preventing and addressing acts of violence against the delivery of health care.

Thirdly, on accountability, I ask you:
6. To ensure that acts of violence against the delivery of health care, which amount to a grave breach of the Geneva Conventions, are penalized as such in domestic legal orders.
7. We would like to see the strengthening of capacities to enable full, prompt, impartial, independent and effective investigations, ensuring enhanced accountability and addressing the grievances of victims.

And lastly, on preparedness and prevention, we ask States and other relevant actors to:
8. Adopt contingency plans in anticipation of situations that could jeopardize the organization and provision of assistance to the sick and wounded.
9. And to develop practical measures for armed forces to minimize disruptions to health care services during the planning and conduct of military operations and incorporate them into orders, rules of engagement, training and standard operating procedures and other relevant documents.

I would like to renew ICRC’s offer today to build a more constructive relationship of deep operational engagement, feedback, dialogue and corrective measures with all parties to conflicts, on the conducts of hostilities. This may eventually contribute to re-establish trust amongst belligerents that the law is not only applicable because of the sanctions and accountability processes attached to it, but a useful and necessary tool in the interest of all.

In this perspective let me just make the following comment: I do understand and respect the role of this Council to offer political positions and orientations with regard to international peace and security. In dealing with the issue of international humanitarian law and its implementation though, the Council must factor into its reflections, the importance of trust, confidence and consensus amongst belligerents, which can best be promoted through neutral intermediaries, able to maintain the confidence of the parties to conflict. It is important therefore that, while united around this table today, we understand and respect our respective roles and responsibilities as political and humanitarian actors.

Excellencies, Ladies and gentlemen,
149 days ago, this Council took historic measures, and your presence today is a testimony of your commitment to the protection of patients and health care workers everywhere.
But meanwhile, men and women, girls and boys, doctors and nurses continue to run to the basements when they hear planes nearing. They continue to pull out their loved ones from the rubble of destroyed hospitals. They continue to fear armed men stopping their ambulances. Much stronger engagement is needed to turn your commitment into a reality on the ground, to make a real difference for people suffering in wars. I urge you to continue to push.

Thank you.

WHO calls for immediate safe evacuation of the sick and wounded from conflict areas

WHO is also calling for a halt of attacks on health care workers and facilities.

News release
30 September 2016 | GENEVA - WHO is calling on belligerents in Syria to allow for the immediate and safe evacuation of the sick and wounded from all areas affected by the conflict, including eastern Aleppo. The Organization is also calling for a halt of attacks on health care workers and facilities.

“The situation is heart-rending and enraging,” says WHO Director-General Margaret Chan. “With the relentless attacks on health workers and hospitals, the handful of doctors still alive cannot possibly cope. Hospital beds are too few, equipment has been destroyed, and essential medicines, including anaesthetics, are running out. Many patients needing emergency trauma care are children.”

Dwindling supplies of food and water

More than 270 000 people are trapped in east Aleppo with dwindling supplies of food, water and fuel. Humanitarian organizations have not been allowed to deliver aid, including medical supplies from WHO since the besiegement of the city on 7 July. Within the past week, over 840 people have been injured, almost a third of them children, while the health facilities that would treat them are crumbling and understaffed. Fewer than 30 doctors remain in the east of the city, and only 6 partially-functional hospitals are in service.

WHO is calling on all parties in the conflict to:
:: allow the immediate evacuation of the sick and wounded from all areas affected by the conflict, including eastern Aleppo;
:: allow access to provide medicines, medical supplies, fuel and health personnel, to support overwhelmed staff in Aleppo;
:: immediately halt all attacks on health workers, facilities and supplies;
:: respect the safety and neutrality of health workers and health facilities;
:: cease removal of critical supplies from deliveries of medical supplies.

“Attacking health care is both illegal and barbaric,” says Dr Pete Salama, Executive Director of WHO’s health emergencies programme. “Blocking whole populations from access to medical care, food and water is intolerable. It is inexcusable cruelty.”

WHO and partners have positioned medical supplies for delivery into eastern Aleppo, but they have not been granted access. The organization has also developed strategies for medical evacuations as soon as this becomes possible. In the meantime, WHO will train first responders on trauma care via telephone and video calls.
WHO: Recognizing health as a human right for refugees and migrants
25 September 2016 – War, conflict and persecution have forced millions of people to flee their homes and seek refuge and safety elsewhere. As of 2015, there were 250 million international migrants, of which 150 million are migrant workers. Also affected are particularly vulnerable groups of refugees (21.3 million) and internally displaced persons (40.8 million). Of these, 9.1 million refugees and 21 internally displaced persons (IDPs) originate from the Eastern Mediterranean Region, which carries the largest burden of refugees and IDPs globally.

Properly addressing the health needs of migrants and refugees improves their health, protects global public health, facilitates integration and contributes to social and economic development in the host country. Yet, while the health of migrants is a prerequisite for their positive contribution to inclusive growth and sustainable development, health has not been extensively included in debates outside the health sector or within the 2030 Sustainable Development Agenda, in particular goals 3.8 and 10.7 to ensure healthy lives for all and to leave no-one behind. Adopting a human rights-based approach means that the rights of refugees, asylum seekers and migrants and the right to health are integral to all priorities and actions.

On 19 September, the United Nations hosted the first high-level UN summit on “Addressing large movement of refugees and migrants” in which Member States endorsed the New York Declaration for Refugees and Migrants, expressing the commitment and political will of world leaders to protect the rights of refugees and migrants, to save lives and share responsibility for large movements on a global scale. On the sidelines of the summit, representatives from the World Health Organization (WHO), the Office of the United Nations High Commissioner for Refugees (UNHCR), and the International Organization for Migration (IOM) convened in New York to increase collaboration in addressing the urgent issue of health in the context of migration and forced displacement...

EU: Commissioner Stylianides in Turkey to launch largest ever EU humanitarian aid programme
26/09/2016
Today in Ankara, Commissioner for Humanitarian Aid and Crisis Management Christos Stylianides has launched the EU's flagship humanitarian aid programme, which is set to provide a monthly electronic cash grant to benefit 1 million refugees in Turkey. The Emergency Social Safety Net (ESSN) aid project has an initial budget of €348 million and will be implemented by the World Food Programme (WFP) and the Turkish Red Crescent (Kizilay), in close collaboration with the Turkish Ministry of Family and Social Policy and the Disaster and Emergency Management Presidency (AFAD).

Speaking in Ankara, Commissioner Stylianides said "I'm confident that EU humanitarian aid will make a real difference for refugees in Turkey, helping one million people. The launch of our new programme here in Turkey today is a clear example of the strong partnership of the EU..."
and Turkey in finding together new innovative ways to address one of the most important humanitarian challenges of our times."

As of October 2016, monthly cash-transfers to electronic cards will be given to refugees in need across Turkey. The cash card is an efficient way of supporting families in purchasing what they most need, providing them the dignity of choice. Refugees will be empowered to feed and house their families, and to send their children to school. As the money will be spent in local markets, the new system will also boost the local economy.

The much needed humanitarian aid will reach one million refugees countrywide by the first quarter of 2017...

Heritage Stewardship

**ICC Trial Chamber VIII declares Mr Al Mahdi guilty of the war crime of attacking historic and religious buildings in Timbuktu and sentences him to nine years’ imprisonment**

Today, 27 September 2016, Trial Chamber VIII of the International Criminal Court (ICC) delivered its Judgment in the case of The Prosecutor v. Ahmad Al Faqi Al Mahdi. The Chamber unanimously found Mr Al Mahdi guilty beyond reasonable doubt as a co-perpetrator of the war crime consisting in intentionally directing attacks against religious and historic buildings in Timbuktu, Mali, in June and July 2012. The Chamber sentenced Mr Al Mahdi to nine years' imprisonment. The time he has spent in detention since his arrest upon the ICC warrant issued on 18 September 2015 will be deducted from the sentence...

**Admission of guilt**

On 22 August 2016, at the opening of the trial, Mr Al Mahdi admitted guilt to the war crime consisting in attacking 10 historic and religious monuments in Timbuktu, Mali, between around 30 June 2012 and 11 July 2012. In its Judgment, the Chamber was satisfied that the Accused understands the nature and consequences of the admission of guilt and that his admission was voluntarily made after sufficient consultation with Defence counsel and is supported by the facts of the case....

**Mr Al Mahdi's role**

In respect of the role played by Mr Al Mahdi, the Chamber considered that Mr Al Mahdi's contributions collectively qualify as essential.

The Chamber found that Mr Al Mahdi knew that he exercised joint control over the attack and was fully implicated in its execution. He was the head of the Hesbah, one of four primary institutions established by Ansar Dine and AQIM upon occupying Timbuktu. He had overall responsibility for the execution phase of the attack, supervising the execution of the operations, using the Hesbah's members and determining the sequence in which the buildings would be destroyed, making the necessary logistical arrangements and justifying the attack to the broader world through media interviews. He also was present at all of the attack sites, giving instructions and moral support, and he personally participated in the attack that led to the destruction of at least five sites.

**Sentence**
To determine the nine-year sentence, the Chamber took into consideration the gravity of the crime, Mr Al Mahdi's culpable conduct and his individual circumstances. The Chamber also noted that, even if inherently grave, crimes against property are generally of less gravity than crimes against persons. The Chamber also considered that the targeted buildings were not only religious buildings but had also a symbolic and emotional value for the inhabitants of Timbuktu. The mausoleums of saints and mosques of Timbuktu were an integral part of the religious life of its inhabitants and constitute a common heritage for the community. They reflected their commitment to Islam and played a psychological role to the extent of being perceived as protecting the people of Timbuktu. Furthermore, all the sites but one were UNESCO World Heritage sites. As such, the attacks on them appear to be of particular gravity as their destruction does not only affect the direct victims of the crimes but also people throughout Mali and the international community.

UNESCO - Timbuktu Trial: "A major step towards peace and reconciliation in Mali"
27.09.2016 – UNESCO PRESS

The International Criminal Court (ICC) has recognized Ahmed Al-Faqi Al-Mahdi guilty of war crime and has sentenced him to 9 years in prison for his responsibility in the deliberate destruction in 2012 of nine mausoleums and the secret gate of the Sidi Yahia mosque in UNESCO’s World Heritage site of Timbuktu (Mali).

“The decision of the International Criminal Court is a landmark in gaining recognition for the importance of heritage for humanity as a whole and for the communities that have preserved it over the centuries. It also supports UNESCO’s conviction that heritage has a major role to play in reconstruction and peace building,” said the Director-General of UNESCO, Irina Bokova

This historic decision, a first under the Rome Statute, is a crucial step to end impunity for the destruction of cultural heritage. It confirms earlier decisions taken by international jurisdictions and it amplifies them in a judgment entirely devoted to the destruction of cultural heritage. This is a major step for the strengthening of international justice and towards peace and reconciliation in Mali.

This case reminds us all of how heritage protection has become a major security issue, which cannot be delinked from the protection of human lives. Deliberate attacks on culture have become weapons of war in a global strategy of cultural cleansing seeking to destroy people as well as the monuments bearing their identities, institutions of knowledge and free thought.

"Immediately after the destruction in 2012, UNESCO alerted the international community and seized the International Criminal Court to ensure such crimes do not go unpunished. In the context of repeated violence against people and their heritage, this sentence of the International Criminal Court is a key element in the broader response to violent extremism," added the Director-General

UNESCO takes also this judgment as an encouragement to continue the work engaged over the last years to protect and rehabilitate heritage in Mali, in close cooperation with the UN peacekeeping force MINUSMA, and to preserve cultural diversity and human rights as a lasting foundation for peace, not only in Mali but also across the world.
Governance

Jim Yong Kim Unanimously Reappointed to Second Term as World Bank Group President
WASHINGTON, September 27, 2016—Executive Directors of the World Bank today agreed unanimously to reappoint Dr. Jim Yong Kim to a second five-year term as President of the World Bank Group, beginning July 1, 2017.

Executive Directors cited the achievements of Bank Group staff and management during Dr. Kim’s first four years in office, and recognized his leadership and vision. Chairs acknowledged several accomplishments the institution has achieved during this time with strong Board support...

Statement by World Bank Group President Jim Yong Kim on Appointment to a Second Five-Year Term
WASHINGTON, September 27, 2016 – World Bank Group President Jim Yong Kim today issued the following statement upon being appointed by the Bank’s Board of Executive Directors to a second five-year term, beginning July 1, 2017:

“I am humbled to have the honor of serving a second term as the head of this great institution. I am grateful to our Board for giving me the opportunity to continue building on our successes. We have accomplished so much over the past four years, thanks to the brilliance and hard work of the Bank’s dedicated staff and management. The starting point for my work when I joined the Bank in 2012 was the setting of two ambitious new goals for the institution: to end extreme poverty by 2030, and to promote shared prosperity - boosting the income growth of the bottom 40 percent of the population in every developing country. In order to deliver on these goals, the Bank had to accelerate, become bolder and more agile, and reposition itself. We did this so that we could increase support for countries and deliver better results more quickly. I believe we are well on the way to achieving these important aims.

The challenges going forward remain large, with climate change, forced displacement, and pandemics threatening the gains we have made to improve the lives of billions. We will need to work even more closely with partners, and continue to find new and innovative ways to leverage scarce development resources effectively.

I believe that the World Bank Group is the greatest instrument for tackling global poverty in the world, with unmatched global knowledge and financial tools. I look forward to working with our professional and diverse staff, our partners, and our member countries to build a more inclusive world, free of poverty.”

Health

Region of the Americas is declared free of measles
Washington, D.C., 27 September 2016 (PAHO/WHO) – The Region of the Americas is the first in the world to have eliminated measles, a viral disease that can cause severe health problems,
including pneumonia, brain swelling and even death. This achievement culminates a 22-year effort involving mass vaccination against measles, mumps and rubella throughout the Americas.

The declaration of measles’ elimination was made by the International Expert Committee for Documenting and Verifying Measles, Rubella, and Congenital Rubella Syndrome Elimination in the Americas. The announcement came during the 55th Directing Council of the Pan American Health Organization/World Health Organization (PAHO/WHO), which is currently underway and is being attended by ministers of Health from throughout the Americas.

Measles is the fifth vaccine-preventable disease to be eliminated from the Americas, after the regional eradication of smallpox in 1971, poliomyelitis in 1994, and rubella and congenital rubella syndrome in 2015.

“This is a historic day for our region and indeed the world,” said PAHO/WHO Director Carissa F. Etienne. “It is proof of the remarkable success that can be achieved when countries work together in solidarity towards a common goal. It is the result of a commitment made more than two decades ago, in 1994, when the countries of the Americas pledged to end measles circulation by the turn of the 21st century.”

Costa Rica - Students, government officials, non-governmental organizations and journalists are some of the nearly 7,000 people that in the last three years have participated in IOM's training and awareness programmes, addressing prevention of human trafficking in the Mesoamerican region.

WHO & Regional Offices [to 1 October 2016]
Discrimination against older people is bad for health
29 September 2016 – New analysis shows that negative attitudes towards older people are widespread, and that these attitudes affect the physical and mental health of older people. More than 83 000 people in 57 countries took part in a WHO survey, in which 60 % of respondents reported that older people are not respected. The lowest levels of respect were reported in high income countries.

World Rabies Day
Educate. Vaccinate. Eliminate.
Date: 28 September 2016
World Rabies Day is celebrated annually to raise awareness about rabies prevention and to highlight progress in defeating this horrifying disease. 28 September also marks the anniversary of Louis Pasteur's death, the French chemist and microbiologist, who developed the first rabies vaccine.

Today, safe and efficacious animal and human vaccines are among the important tools that exist to eliminate human deaths from rabies while awareness is the key driver for success of communities to engage in effective rabies prevention.

The theme for 2016 is Rabies: Educate. Vaccinate. Eliminate. which emphasises the two crucial actions that communities can do to prevent rabies. It also reflects the global target to eliminate all human deaths from dog-mediated rabies by 2030.

Highlights
Neglected tropical diseases: 979 million people treated in 2015 alone
September 2016 – WHO has released data for 2015 showing that a record 979 million people benefited from large-scale treatment of at least 1 neglected tropical disease in 2015 alone. This
unprecedented achievement may be the first time that so many people have been treated globally as part of a public health intervention in one single year.

**New financial arrangement improves WHO prequalification of medical products**

September 2016 – WHO, industry groups and key partners have agreed on a new financing arrangement to ensure the financial sustainability and quality of WHO’s prequalification programme. The arrangement is based on an improved fee structure and aims to address global quality challenges in medical products.

**Region of the Americas is declared free of measles**

September 2016 -- The Region of the Americas is the first in the world to have eliminated measles, a viral disease that can cause severe health problems, including pneumonia, blindness, brain swelling and even death. This achievement culminates a 22-year effort involving mass vaccination against measles, mumps and rubella throughout the Americas.

Governments should use voluntary sustainability standards to move towards sustainable development goals - report

VIENNA – Governments should use voluntary sustainability standards to move towards the Sustainable Development Goals (SDGs), but they have not yet seized this opportunity, according to a new report released this week.

The report by the United Nations Forum on Sustainability Standards (UNFSS) explores recent developments in this field and suggests that both governments and businesses must streamline fast-growing sustainability certification schemes.

The sheer number of such schemes, such as the Marine Stewardship Council, the Rainforest Alliance, and the Better Cotton Initiative, is growing fast, but their number and complexity overwhelms some developing country exporters, for whom they can act as a barrier to market entry...

ASEAN strengthens efforts to eliminate trafficking in persons

JAKARTA, 28 September 2016 – The ASEAN Commission on the Promotion and Protection of the Rights of Women and Children (ACWC) launched the Regional Review on Laws, Policies and Practices within ASEAN related to the identification, management and treatment of victims of trafficking especially women and children today. The Regional Review aims to support the implementation of the ASEAN Convention against Trafficking in Persons Especially Women and Children which was signed by the Heads of States at the 27th ASEAN Summit in November 2015. The Regional Review provides an accurate and up-to-date assessment of the current situations, good practices, and issues for consideration, as well as presenting recommendations for improvement in responses to victims of trafficking.

The Regional Review was enriched by the results of in-country researches conducted last year through desk reviews, key informant interviews, focused group discussions, and shelter visits. The Regional Review covers the entire spectrum of trafficking in persons including victim identification and referral, protection, support, and recovery assistance to victims, access to remedies, no detention/prosecution of victims for status offences, return and reintegration of victims, as well as prevention of trafficking. Emphasis is given to the importance of human rights-based approach in combating trafficking in persons and helping the victims...

Questions & Answers: A coordinated EU approach for temporary internal border controls
Date: 28/09/2016
European Commission - Fact Sheet Brussels, 28 September 2016 What has the Commission adopted today? The Commission has today adopted a report evaluating the implementation of the Council Recommendation of 12 May 2016, which allowed five countries (Schengen Member States Austria, Germany, Denmark, Sweden and Norway) to continue carrying out border controls at specific sections of their internal borders to address the exceptional circumstances that gave rise to the persistent risk of secondary movements of irregular migrants coming from Greece.

The Commission’s report concludes that the temporary internal border controls carried out by the Schengen Member States concerned have remained within the conditions set by the Council in its Recommendation. The controls have been limited to what is strictly necessary and proportionate in light of the serious threat to public policy and internal security posed by the risk of secondary movements of irregular migrants entering via Greece. The Commission further concludes that there is currently no change of circumstances that would justify an amendment of the Recommendation at this stage...

**The Mission to Support the Peace Process in Colombia (MAPP/OAS): [History]**

September 26, 2016

**Peace Agreement in Colombia: Statement from the OAS Secretary General**

Today is a day the world will not forget. The peace agreement in Colombia is a milestone applauded by all the countries of the hemisphere and the world.

Peace for Colombia is peace for everyone.

I congratulate the government of President Juan Manuel Santos and the leaders and members of the FARC-EP for the determination and the conviction to put an end to more than half a century of armed confrontation through dialogue.

Colombia has shown that, when dialogue is results-oriented, convictions are strong and the objective worthwhile, the impossible becomes possible.

During the last 12 years, the OAS has closely accompanied peace efforts in Colombia, and we will continue to do so in the post-conflict stage.

The government has requested that the Mission of Support for the Peace Process (MAPP/OAS) continue its deployment in the territories most affected by the armed conflict.

In this new period, we will focus on monitoring those dynamics that pose risks, threats and challenges to the peace.

Yesterday, today and always, we are committed to peace and we will continue to be committed to Colombia.

WTO PUBLIC FORUM
**Public Forum stresses the role of trade in empowering women**

Participants in the 2016 Public Forum agreed that a combination of capacity building, financing, government policies and networking is needed for women to take full advantage of the opportunities offered by trade

A session organized by the permanent missions of the United Kingdom and Australia and the International Trade Centre (ITC) concluded that trade can only be truly inclusive if women worldwide are empowered. Despite the economic gains offered by trade, only one in five exporting companies are owned by women and 90 per cent of countries have at least one law discriminating against women, said Arancha González, the Executive Director of the ITC. The session also highlighted that many women lack confidence and the technical and financial capacity to engage in trade...

**Stronger Emerging Market Corporate Governance Enhances Financial Resilience**

September 29, 2016

- Improved corporate governance over past two decades
- Governance bolsters resilience to financial shocks
- Corporate governance can strengthen firms' balance sheets

Stronger corporate governance and investor protection can enhance the resilience of emerging market economies to global financial shocks, and strengthen corporate balance sheets, according to new research from the International Monetary Fund.

Corporate governance and investor protection encompass rules and practices at both the country and firm level, which help ensure that the suppliers of finance to companies get a return on their investment.

In the latest research for the Global Financial Stability Report, the IMF said that corporate governance and investor protection have generally improved in emerging market economies over the past two decades, and that these developments have helped bolster the resilience of their financial systems. Although this new study focuses on emerging market economies, corporate governance and investor protection issues are also of importance for advanced economies, according to the IMF...

Towards enhancing the legal capacity of African government officials

“The challenges many African governments face in negotiations are made worse by the interdependent nature of government systems which requires targeted skills in specified sectors complemented by better coordination when it comes to negotiating transactions for governments. Also, some governments are in a difficult position because they are stuck with poorly negotiated contracts. How should governments deal with agreements that have no spill over effect of investment? A negotiating strategy which provides a framework within which governments can look for common elements and models that can be used to their advantage is important.” stated Falou Samb, Special Advisor to the President Senegal on Trade and Investments in Senegal.

Studies on West African corridors highlight improved performance and need for short term high impact projects to consolidate gains

30/09/2016 - Results from a performance analysis study, conducted on three West African corridors – involving consultation with actors such as countries, customs, corridor management organisations, transporters, etc., were unveiled at a regional coordination meeting convened, today, in Abidjan by the Economic Community of West African States (ECOWAS), the African Development Bank (AfDB) and the ATWA project.

Leaders stress support for creating decent employment for youth in Africa

26/09/2016 - Leaders on Tuesday expressed the need for African countries to urgently embark on programs to create decent job opportunities for the youth on the continent. Speaking in New York in a high-level side event organized by the New Partnership for Africa’s...
Development (NEPAD) on the sidelines of the United Nations General Assembly, the leaders concurred that lack of decent employment opportunities for African youth was a recipe for disaster and that African governments needed to act quickly avert a crisis in the continent.

MDG Transition Report: Reliable statistics and integrated policy approach key to successful SDG and Agenda 2063 implementation

New report: violent attacks forcing millions of Syrians to flee
Silver Spring, MD--A new report identifies indiscriminate bombings as the overriding factor forcing millions of Syrians to flee their homes. Qasef: Escaping the bombing takes an intimate look at the worst humanitarian crisis since World War II. Based on interviews with Syrian refugees in July 2016, a document review, and expert interviews, the report identifies the large scale use of explosive weapons in populated areas as the most significant cause of the mass displacement of Syrians. More than 10.9 million Syrians have been affected, equivalent to more than half of the country’s population...

**Developing cash experts in the field**
Ida Sem Fossvik|Published 30. Sep 2016

A new pilot scheme means NORCAP experts can receive training in cash transfer programming while applying their skills on mission.

The goal is to strengthen and increase technical expertise on cash transfer programming, by ensuring that more experts are confident in using the method and able to apply it to various contexts and responses.

So far, six NORCAP experts, with a background from water, sanitation and hygiene, logistics, shelter and protection have applied to be part of the training scheme, which aims to combine theoretical training with practical placements.

**ACAPS provide the backdrop for TRIPLEX training**

ACAPS has been involved in organising one of the biggest humanitarian field exercises, TRIPLEX, this week. ACAPS and NORCAP experts have also participated in the training.
The TRIPLEX is a five-day training where humanitarians, governments, military and volunteers participate in order to practice the international humanitarian response in a simulated sudden-onset emergency scenario.

**HealthRight International honours Seth Berkley for leadership in global health**

HealthRight International, an organisation dedicated to delivering health care to marginalised communities around the world, has honoured Gavi CEO, Dr. Seth Berkley, for his career as a leader in global health.

The group’s annual Health & Human Rights Awards Dinner brought together human rights and public health professionals, leaders from civil society, media, politics and the business community.

In addition to honouring Dr. Berkley, HealthRight International also recognised the accomplishments of Dr. Eva Metalios. The Medical Director of the Bronx Human Rights Clinic & the Montefiore Medical Centre Residency Program in Primary Care and Social Internal Medicine, Dr. Metalios treats torture survivors and trains other doctors to perform forensic exams on those who have faced violent persecution.

Dr. Lyndon Haviland, a global public health expert and advocate who has worked for many years with Dr. Berkley, presented the award by citing how he has combined expertise and passion in his work. He “will jump into the deep end of any pool to make it possible for all of us to deliver on the value proposition: that every child, everywhere, every person in every country deserves a life of dignity and health,” she said...

Report Synopsis
Displacement, Democratic Republic of the Congo
Date: 2016/09/28
28 September 2016 we responded to a funding alert for the Democratic Republic of the Congo (DRC), raised in response to the high number of South Sudanese refugees entering the country.
As of 22 September, UNHCR had registered some 13,000 South Sudanese refugees, while over 10,000 are still to be registered. Refugee numbers have surpassed humanitarian response capacity in some provinces, and new arrivals are further increasing humanitarian need.
According to the UN Office for the Coordination of Humanitarian Affairs (OCHA)’s Financial Tracking Service (FTS), donors have committed/contributed US$405.4 million of humanitarian assistance to DRC since the start of 2016. In addition, US$14.7 million of requirements for DRC are also set out under the South Sudan Regional Refugee Response Plan – this entire amount is currently unmet.

**Militancy and the Arc of Instability**
September 27, 2016 | By Jennifer G. Cooke, Thomas M. Sanderson
An arc of instability stretching across Africa’s Sahel region, an area of strategic interest for the United States and its allies, is plagued by violent extremist organizations (VEOs). These organizations, including Boko Haram, al Qaeda, and other terror groups, have metastasized and present a serious threat to regional stability. Now these VEOs are transitioning. Under sustained pressure from French and regional security forces, and reeling from the loss of senior leaders, many of these groups feel backed into a corner. Despite setbacks, the groups continue to plague the region. To enhance policymakers’ understanding of these threats and how to respond to them, CSIS experts from the Africa Program and Transnational Threats Project conducted field-based and scholarly research examining the broad range of factors at play in the region. This research provides little ground for optimism. Chronic underdevelopment, political alienation, failed governance and corruption, organized crime, and spillover from Libya help foster and sustain violent extremists throughout the Sahel.

**Global Competitiveness Report 2016-2017**
Geneva, Switzerland, 29 September 2016 –
The report finds that declining openness is threatening growth and prosperity. Monetary stimulus measures, such as quantitative easing are not enough to sustain growth and must be accompanied by competitiveness reforms. For emerging economies, updated business practices and investment in innovation are now as important as infrastructure, skills and efficient markets. Switzerland, Singapore and the United States remain the world’s most competitive economies. China, ranked 28th among the 139 economies covered by the report, remains top among the BRICS grouping.

Data wranglers wanted: new Data Task Force to improve synthesis outcomes

The National Center for Ecological Analysis and Synthesis (NCEAS) is launching an innovative “Data Task Force” to support synthesis research with a new $2.1 million grant from the Gordon and Betty Moore Foundation. In contrast to mining Big Data, synthesis research recognizes the value of small, information rich datasets generated by scientists all over the world. However, collecting, combining, and “wrangling” these many discrete data sets for synthesis presents a daunting challenge.

“Combining heterogeneous data from many sources presents significant technical difficulties, not to mention the cultural hurdles associated with getting data providers to hand over their data,” says Carly Strasser, Ph.D., a program officer for science at the Moore Foundation. “NCEAS’ 21 years of leadership in synthesis science, cutting-edge informatics approaches and well-regarded data management tools will help to ensure the Data Task Force's success in overcoming these barriers.” ...

Future Cities Accelerator Receives More Than 600 Proposals, Marking Close of Application Period for the Urban Challenge

The Accelerator, Powered by The Rockefeller Foundation & Unreasonable Institute, Seeks to Address Urban Challenges

Applicants From Dozens of Cities Across the US Have The Opportunity to Win $100,000 Each to Scale Programs Improving Lives of Poor or Vulnerable in Cities

BOULDER, CO—The Future Cities Accelerator, powered by The Rockefeller Foundation and Unreasonable Institute, has received more than 600 proposals from dozens of cities around the country. Over the next several months, Unreasonable Institute and select mentors will evaluate applications beginning with an analysis of their proposal, followed by phone interviews with a smaller subset of applicants and will culminate with in-person site visits for applicant finalists. The 10 winners will receive $100,000 in funding, nine months of support, guidance from world-renowned mentors including Tom Chi, formerly of Google X and Co-Founder of Google Glass; Dan Rosen, Founder and President of Mosaic; Becky Margiotta, Co-Founder of The Billions Institute along with others, and attendance to a five-day intensive bootcamp led by Unreasonable Institute in Denver. Winners will be announced in early January 2017...

**Medicine shortages: a commentary on causes and mitigation strategies**
Swathi Iyengar, Lisa Hedman, Gilles Forte and Suzanne Hill
BMC Medicine 2016 14:124
Published on: 29 September 2016

Abstract
Shortages of medicines and vaccines have been reported in countries of all income levels in recent years. Shortages can result from one or multiple causes, including shortages of raw materials, manufacturing capacity problems, industry consolidation, marketing practices, and procurement and supply chain management. Existing approaches to mitigate shortages include advance notice systems managed through medicine regulatory authorities, special programmes that track medicines, and interventions to improve efficiency of the medicine supply chain. Redistribution of supplies at the national level can mitigate some shortages in the short term. International redistribution and exceptional regulatory approvals may be used in limited circumstances, with the understanding that such approaches are complex and may introduce cost and quality risks. If it is necessary to prioritise patients to receive a medicine that is in shortage, evidence-based practice should be used to ensure optimal allocation. Important steps in reducing medicine shortages and their impact include identifying medicines that are most at risk, developing reporting systems to share information on current and emerging shortages, and improving data from medicine supply chains.

**The disease of corruption: views on how to fight corruption to advance 21st century global health goals**
Tim K. Mackey, Jillian Clare Kohler, William D. Savedoff, Frank Vogl, Maureen Lewis, James Sale, Joshua Michaud and Taryn Vian
BMC Medicine 2016 14:149
Published on: 29 September 2016

Abstract
Corruption has been described as a disease. When corruption infiltrates global health, it can be particularly devastating, threatening hard gained improvements in human and economic development, international security, and population health. Yet, the multifaceted and complex nature of global health corruption makes it extremely difficult to tackle, despite its enormous
costs, which have been estimated in the billions of dollars. In this forum article, we asked anti-corruption experts to identify key priority areas that urgently need global attention in order to advance the fight against global health corruption. The views shared by this multidisciplinary group of contributors reveal several fundamental challenges and allow us to explore potential solutions to address the unique risks posed by health-related corruption. Collectively, these perspectives also provide a roadmap that can be used in support of global health anti-corruption efforts in the post-2015 development agenda.

Adding interventions to mass measles vaccinations in India
Mira Johri, Stéphane Verguet, Shaun K Morris, Jitendar K Sharma, Usha Ram, Cindy Gauvreau, Edward Jones, Prabhat Jha & Mark Jit
http://dx.doi.org/10.2471/BLT.15.160044

Abstract
Objective
To quantify the impact on mortality of offering a hypothetical set of technically feasible, high-impact interventions for maternal and child survival during India’s 2010–2013 measles supplementary immunization activity.
Methods
We developed Lives Saved Tool models for 12 Indian states participating in the supplementary immunization, based on state- and sex-specific data on mortality from India’s Million Deaths Study and on health services coverage from Indian household surveys. Potential add-on interventions were identified through a literature review and expert consultations. We quantified the number of lives saved for a campaign offering measles vaccine alone versus a campaign...
offering measles vaccine with six add-on interventions (nutritional screening and complementary feeding for children, vitamin A and zinc supplementation for children, multiple micronutrient and calcium supplementation in pregnancy, and free distribution of insecticide-treated bednets).

Findings
The measles vaccination campaign saved an estimated 19 016 lives of children younger than 5 years. A hypothetical campaign including measles vaccine with add-on interventions was projected to save around 73 900 lives (range: 70 200–79 300), preventing 73 700 child deaths (range: 70 000–79 000) and 300 maternal deaths (range: 200–400). The most effective interventions in the whole package were insecticide-treated bednets, measles vaccine and preventive zinc supplementation. Girls accounted for 66% of expected lives saved (12 712/19 346) for the measles vaccine campaign, and 62% of lives saved (45 721/74 367) for the hypothetical campaign including add-on interventions.

Conclusion
In India, a measles vaccination campaign including feasible, high-impact interventions could substantially increase the number of lives saved and mitigate gender-related inequities in child mortality.

Research

Estimation of child vaccination coverage at state and national levels in India
Pankaj Bhatnagar, Satish Gupta, Rakesh Kumar, Pradeep Haldar, Raman Sethi & Sunil Bahl
http://dx.doi.org/10.2471/BLT.15.167593

Abstract
Objective
To review the data, for 1999–2013, on state-level child vaccination coverage in India and provide estimates of coverage at state and national levels.

Methods
We collated data from administrative reports, population-based surveys and other sources and used them to produce annual estimates of vaccination coverage. We investigated bacille Calmette–Guérin vaccine, the first and third doses of vaccine against diphtheria, tetanus and pertussis, the third dose of oral polio vaccine and the first dose of vaccine against measles. We obtained relevant data covering the period 1999–2013 for each of 16 states and territories and the period 2001–2013 for the state of Jharkhand – which was only created in 2000. We aggregated the resultant state-level estimates, using a population-weighted approach, to give national values.

Findings
For each of the vaccinations we investigated, about half of the 253 estimates of annual coverage at state level that we produced were based on survey results. The rest were based on interpolation between – or extrapolation from – so-called anchor points or, more rarely, on administrative data. Our national estimates indicated that, for each of the vaccines we investigated, coverage gradually increased between 1999 and 2010 but then levelled off.

Conclusion
The delivery of routine vaccination services to Indian children appears to have improved between 1999 and 2013. There remains considerable scope to improve the recording and reporting of childhood vaccination coverage in India and regular systematic reviews of the coverage data are recommended.

VIEWPOINTS
Moving Medicine, Moving Minds: Helping Developing Countries Overcome Barriers to Outsourcing Health Commodity Distribution to Boost Supply Chain Performance and Strengthen Health Systems
Senegal and other developing countries are improving access to health commodities by outsourcing supply chain logistics to private providers. To achieve broader, lasting reform, we must support further adoption of the outsourced model; assist country-led cost-benefit analyses; and help governments build capacity to manage contracts and overcome other barriers.

Successful Implementation of a Multicountry Clinical Surveillance and Data Collection System for Ebola Virus Disease in West Africa: Findings and Lessons Learned
Despite resource and logistical constraints, International Medical Corps cared for thousands at 5 Ebola treatment units in Liberia and Sierra Leone between 2014 and 2015 while collecting hundreds of data points on each patient. To facilitate data collection and global reporting in future humanitarian responses, standardized data forms and databases, with clear definitions of clinical and epidemiological variables, should be developed and adopted by the international community.

ORIGINAL ARTICLES
A Randomized Controlled Trial of a Trauma-Informed Support, Skills, and Psychoeducation Intervention for Survivors of Torture and Related Trauma in Kurdistan, Northern Iraq
Providing survivors of torture, imprisonment, and/or military attacks with a counseling program that includes support, skills and psychoeducation by well-trained and supervised community mental health workers can result in moderate yet meaningful improvements in depression and dysfunction.

ABSTRACT
Supportive counseling type interventions are frequently provided to meet the mental health needs of populations in emergency and post-conflicts contexts, but it has seldom been rigorously evaluated. Existing evaluations from low- and middle-income countries provide mixed
evidence of effectiveness. While Iraqi Kurdistan experienced relative stability following the fall of Saddam Hussein’s government, the population in the northern Dohuk region has continued to experience periodic violence due to conflicts with neighboring Turkey as well as more recent ISIS-associated violence. We evaluated the impact of a trauma-informed support, skills, and psychoeducation intervention provided by community mental health workers (CMHWs) on depressive symptoms and dysfunction (primary outcomes) as well as post-traumatic stress, traumatic grief, and anxiety symptoms (secondary outcomes). Between June 2009 and June 2010, 295 adults were screened; 209 (71%) met eligibility criteria (trauma exposure and a symptom severity score indicating significant distress and functional impairment, among others) and consented to participate. Of these, 159 were randomized to supportive counseling while 50 were randomized to a waitlist control condition. Comparing average symptom severity scores post-treatment among those in the intervention group with those in the waitlist control group, the supportive counseling program had statistically and clinically significant impacts on the primary outcomes of depression (Cohen’s d, 0.57; P = .02) and dysfunction (Cohen’s d, 0.53; P = .03) and significant but smaller impacts on anxiety. Although studies by the same research team of psychotherapeutic interventions in other parts of Kurdistan and in southern Iraq found larger effects, this study adds to the global research literature on mental health and psychosocial support and shows that a well-trained and supervised program of trauma-informed support, skills, and psychoeducation that emphasizes the therapeutic relationship can also be effective.

Progress in Harmonizing Tiered HIV Laboratory Systems: Challenges and Opportunities in 8 African Countries
Countries have had mixed results in adhering to laboratory instrument procurement lists, with some limiting instrument brand expansion and others experiencing substantial growth in instrument counts and brand diversity. Important challenges to advancing laboratory harmonization strategies include:

:: Lack of adherence to procurement policies
:: Lack of an effective coordinating body
:: Misalignment of laboratory policies, treatment guidelines, and minimum service packages

Tiffany Henley, Maureen Boshier
DOI: http://dx.doi.org/10.1017/S1744133116000141

*Abstract*
The passage of the Affordable Care Act in the United States has opened a policy window for the establishment of an independent Medicaid agency for the Navajo Nation. This article explores several policy options to improve health care services for Native Americans. Although there is a lack of scholarly research on the impact of healthcare reform and the effectiveness of current health care programs for American Indians, policymakers should utilize evidence-based research to inform policy decisions.

People-centred health systems: building more resilient health systems in the wake of the Ebola crisis
Fred P. Martineau

Abstract
The 2014–2016 West African Ebola outbreak demonstrated the extent to which local social and political dynamics shape health system responses to crises such as epidemics. Many post-Ebola health system strengthening programmes are framed around a notion of health system ‘resilience’ that focuses on global rather than local priorities and fails to account for key local social dynamics that shape crisis responses. Post-crisis health system strengthening efforts...
require a shift towards a more ‘people-centred’ understanding of resilience that attends to the
people, relationships and local contexts that constitute health systems and the practices that
produce crisis responses.

Development of drugs for severe malaria in children
Phaik Yeong Cheah, Michael Parker, and Arjen M. Dondorp
Abstract
Over 90% of deaths attributable to malaria are in African children under 5 years old. Yet, new
treatments are often tested primarily in adult patients and extrapolations have proven to be
sometimes invalid, especially in dosing regimens. For studies in severe malaria an additional
complication is that the decline in severe malaria in adult patients precludes sufficiently
powered trials in adults, before the intervention can be tested in the ultimate target group,
paediatric severe malaria. In this paper we propose an alternative pathway to the development
of drugs for use in paediatric severe malaria. We argue that following the classical phase I and
II studies, small safety and efficacy studies using well-chosen surrogate endpoints in adult
severe malaria be conducted, instead of larger mortality endpoint trials. If the drug appears
safe and promising small pilot studies in paediatric severe malaria using the same endpoints
can follow. Finally, with carefully observed safeguards in place to ensure high ethical standards,
promising candidate interventions can be taken forward into mortality endpoint, well-powered,
large paediatric studies in African children with severe malaria. Given the available research
capacity, limited numbers of prudently selected interventions can be studied in phase III trials,
and adaptive designs should be considered.

Lessons learnt from TB screening in closed immigration centres in Italy

Prestileo, Luigi Codecasa, Silvia Garelli, Salvatore Corrao, Giuseppe Ippolito, Tom Decroo, and
Barbara Maccagno
Abstract
Background Between June 2012 and December 2013 Médecins Sans Frontières launched a pilot
project with the aim of testing a strategy for improving timely diagnosis of active pulmonary TB
among migrants hosted in four centres of identification and expulsion (CIE) in Italy.
Methods This is a descriptive study. For active TB case finding we used an active symptom
screening approach among migrants at admission in four CIE’s. Here we describe the feasibility
and the yield of this programme.
Results Overall, 3588 migrants were screened, among whom 87 (2.4%) had a positive
questionnaire. Out of 30 migrants referred for further investigations, three were diagnosed as
having TB, or 0.1% out of 3588 individuals that underwent screening. Twenty-five (29%,
25/87) migrants with positive questionnaires were not referred for further investigation,
following the doctors’ decision; however, for 32 (37%, 32/87) migrants the diagnostic work-out
was not completed. In multivariate analyses, being over 35 years (OR 1.7; 95% CI 1.1–2.6) and
being transgender (OR 4.9; 95% CI 2.1–11.7), was associated with a positive questionnaire.
Conclusions TB screening with symptom screening questionnaires of migrants at admission in
closed centres is feasible. However, to improve the yield, follow-up of patients with symptoms
or signs suggestive for TB needs to be improved.
Not forgetting severe mental disorders in humanitarian emergencies: a descriptive study from the Philippines
Ana Cecilia Andrade de Moraes Weintraub, Mariana Gaspar Garcia, Elisa Birri, Nathalie Severy, Marie-Christine Ferir, Engy Ali, Katie Tayler-Smith, Dinah Palmera Nadera, and Mark Van Ommeren

Abstract
Background Severe mental disorders are often neglected following a disaster. Based on Médecins Sans Frontières’ (MSF) experience of providing mental health (MH) care after the 2013 typhoon in the Philippines, we describe the monthly volume of MH activities and beneficiaries; characteristics of people seeking MH care; profile and outcomes of people with severe mental disorders; prescription of psychotropic medication; and factors facilitating the identification and management of individuals with severe mental disorders.

Methods A retrospective review of programme data was carried out.

Results In total, 172 persons sought MH care. Numbers peaked three months into MSF’s intervention and decreased thereafter. Of 134 (78%) people with complete data, 37 (28%) had a severe mental disorder, often characterised by psychotic symptoms (n=24, 64%) and usually unrelated to the typhoon (n=32, 86%). Four people (11%) were discharged after successful treatment, two (5%) moved out of the area, 20 (54%) were referred for follow-up on cessation of MSF activities and 10 (27%) were lost-to-follow-up. Psychotropic treatment was prescribed for 33 (75%) people with mental disorders and for 11 with non-severe mental disorders.

Conclusions This study illustrates how actors can play an important role in providing MH care for people with severe mental disorders in the aftermath of a disaster.

On Aug 23, WHO quietly released a report that should be essential reading for all. Coming 15 years after the Abuja Declaration by African governments to commit to spending 15% of annual domestic budgets on health, concludes with a stark analysis: “For every US$100 that goes into state coffers in Africa, on average US$16 is allocated to health, only US$10 is in effect spent, and less than US$4 goes to the right health services.”

The analysis is a timely reminder that the issue of domestic health financing is not simply a function of economic development. Indeed, the report shows clearly that increased gross domestic product (GDP) in Africa over the past 15 years has rarely led to increased government spending on health, and current figures show that the average proportion of public expenditure on health of 10% applies to countries across all levels of the income spectrum. In fact DR Congo, at a GDP of $476, allocates 11% of public expenditure to health, whereas Botswana, with its 13 times greater GDP of $6041 allocates only 9%.

The 2016 Africa Data Report released by the advocacy organisation ONE on the same day presents complementary findings, including an analysis of the amount spent on health per capita. The High-level Taskforce on Innovative International Financing for Health Systems calculated that the amount of spending necessary to provide a package of key basic health services in low-income countries is $54 (in 2005 prices). The ONE report illustrates the vast range of current per-capita health spending across sub-Saharan Africa, with eight countries spending at least double this figure, but 29 countries spending less than half of it.

In many cases, health has actually been shifted further down the agenda as a country's financial prosperity has increased. The WHO report's authors put this down to several factors, including poor coordination between ministries of health and finance; unstable funding flows (both domestic and donor) that hamper health sector planning, contribute to poor performance, and thus compound health's lower priority; and continued low revenue generation through taxation even as GDP rises, leaving little “fiscal space” for allocation to health.

Beyond health sector allocation, however, the WHO report highlights an all-too-commonplace failure to actually spend the money set aside for health. The authors estimate that, across Africa, 10–30% of budgets authorised to be devoted to health remain unspent, particularly funds destined for infrastructure. These failures seem to come down to a fundamental deficiency in public expenditure management, and are an obvious yet under-recognised target for analysis and reform.

Finally, the report drills down into the question of spending prioritisation within the health sector itself. Evidence shows that recent increases in health expenditure in Africa have not tended to favour expansion of primary care services nor those most accessible to poorer people. Indeed, less than 40% of public expenditure is estimated to be spent on primary care in most African countries. Furthermore, even when coverage has expanded, subsidisation has not necessarily followed, resulting in a continued skewing of catastrophic expenditure towards the lowest income sectors. The quality of the services provided is another crucial issue, the report...
finds, since bellwether indicators such as maternal mortality ratio can vary from less than 250 to almost 1500 per 100 000 livebirths for the same level of health expenditure (in this case $200 per capita).

What are the recommendations, then? Revenue (ie, tax) collection is a key target for strengthening, and, as outlined in a recent blog by José Luis Castro, tobacco taxation is a prime candidate. Castro points to the Philippines' “sin tax” reform as a model: not only does it simplify the country's previously complex tax structure and enshrine it in law, it directs the proceeds towards a defined health benefit—ie, the country's universal health-care programme. Such identification of defined benefits and alignment with appropriate payment mechanisms is another key recommendation of the WHO report, and feeds into the need for better engagement between ministries of health and finance and cultivation of long-term, sustainable sources of health financing. Castro praises the Philippines' then Undersecretary of Finance, Jeremias Paul, for bridging the gap, and calls for more such role models to come forward.

President Xi Jinping of China's recent public statement that health authorities alone cannot ensure a healthy populace was a landmark step: which African leader will follow?

Comment

Global trends in vaccination coverage
Published: 25 August 2016
Michiel van Boven, Alies van Lier
Universal vaccination programmes have greatly reduced the burden of infectious diseases in both developing and developed countries.1, 2, 3 In the 1960s and 1970s, these reductions led to optimism that a victory in the battle against infectious diseases could be within reach. Unfortunately, even though the benefits of most childhood vaccinations are scientifically unquestioned, vaccination coverage rates are far from 100% in many countries, and show substantial variation. Early detection of trends and an improved understanding of underlying mechanisms are paramount to be able to improve vaccination policies.

In The Lancet Global Health, Alexandre de Figueiredo and colleagues4 take a step in this direction with their time-series analysis of trends in vaccine coverage and a suite of socioeconomic and demographic factors across 190 countries over 30 years. The main aim was to gauge where and when vaccination coverage might fall below levels that are safe for prevention of epidemic transmission, and to correlate such decreases with underlying socioeconomic and demographic factors.

The investigators used WHO–UNICEF coverage estimates of three doses of diphtheria, tetanus, and pertussis (DTP3) vaccination and obtained data from Gapminder. By use of a statistical framework based on Gaussian process regression and a newly developed vaccine performance index, which forecasts that vaccination coverage will be at a safe level (90%) in the near future, the analyses yield some interesting results next to the basic fact that worldwide coverage has increased. For instance, gross domestic product (GDP) and government health spending correlate most strongly with vaccination coverage in Eastern Mediterranean countries between 1980 and 2010, whereas primary school completion correlates most strongly with vaccination coverage in Africa (more so than does GDP). The analyses also provide a list of countries with high to low vaccine performance indices, showing that many of the countries at the low end of the list are in sub-Saharan Africa, the Indian subcontinent, and southeast Asia. From a global public health perspective, the list provides an objective measure that can be used to prioritise
countries or regions where efforts to increase vaccination coverage are expected to be most efficient.

Notably, although vaccination coverage correlates well with GDP and schooling in many regions of the world, this is not the case any more in Europe and, to a lesser extent, North America. Here, no socioeconomic factors correlated with high coverage, and one argument is that once the basic necessities of life are available, other factors such as social attitudes to vaccination might become more important.\textsuperscript{5, 6} Because of the focus on socioeconomic factors, de Figueiredo and colleagues' findings cannot add much more than speculation to this argument, and it will be interesting to see the outcomes when the set of variables is extended to encompass social indicators that might shape vaccine hesitancy.\textsuperscript{7}

With a focus on global immunisation patterns and the relation with socioeconomic factors, the investigators have painted a picture with broad brushes, one that cannot hope to unravel patterns that are important in specific regions or countries and for particular diseases. Examples are the difficulties encountered in the push towards eradication of polio in Afghanistan and Pakistan driven by war and extreme ideologies,\textsuperscript{8} the struggle to achieve elimination of measles in Europe given vaccine refusal in clustered religious and anthroposophical groups, and the perceived lack of safety of the human papillomavirus vaccine fuelled by adverse events after vaccination.\textsuperscript{9} These examples show that a full understanding of local coverage patterns requires data and analyses at the local level.

Technically, the vaccine performance index might have to be developed further. The index provides an aggregate measure that takes both vaccination coverage and changes in coverage into account. One could argue that in its current form the vaccine performance index punishes countries with systematically high but volatile vaccination coverage (eg, Norway) quite strongly. In fact, low vaccine performance indices in these countries might be due to reporting bias or small sample sizes (in cases when a national registry is not available). Indeed, in developing countries, precise figures for vaccination coverage are often not available, and estimation of vaccination coverage is not always straightforward.\textsuperscript{10, 11} Future developments will probably have to incorporate the uncertainty in vaccination coverage estimates to prevent artificial increases in the precision of the correlations.

Overall, de Figueiredo and colleagues have provided a laudable analysis of the link between vaccination coverage rates and demographic and socioeconomic factors at the global scale. In addition to providing an overview of trends and potential explanations, an important merit of the study is that it forces us to think about the factors that determine vaccination coverage now and in the future...

\textbf{Forecasted trends in vaccination coverage and correlations with socioeconomic factors: a global time-series analysis over 30 years}
Alexandre de Figueiredo, Iain G Johnston, David M D Smith, Sumeet Agarwal, Heidi J Larson, Nick S Jones

\textbf{Summary}
Background
Incomplete immunisation coverage causes preventable illness and death in both developing and developed countries. Identification of factors that might modulate coverage could inform effective immunisation programmes and policies. We constructed a performance indicator that...
could quantitatively approximate measures of the susceptibility of immunisation programmes to coverage losses, with an aim to identify correlations between trends in vaccine coverage and socioeconomic factors.

Methods
We undertook a data-driven time-series analysis to examine trends in coverage of diphtheria, tetanus, and pertussis (DTP) vaccination across 190 countries over the past 30 years. We grouped countries into six world regions according to WHO classifications. We used Gaussian process regression to forecast future coverage rates and provide a vaccine performance index: a summary measure of the strength of immunisation coverage in a country.

Findings
Overall vaccine coverage increased in all six world regions between 1980 and 2010, with variation in volatility and trends. Our vaccine performance index identified that 53 countries had more than a 50% chance of missing the Global Vaccine Action Plan (GVAP) target of 90% worldwide coverage with three doses of DTP (DTP3) by 2015. These countries were mostly in sub-Saharan Africa and south Asia, but Austria and Ukraine also featured. Factors associated with DTP3 immunisation coverage varied by world region: personal income (Spearman's $\rho=0.66$, $p=0.0011$) and government health spending ($0.66$, $p<0.0001$) were informative of immunisation coverage in the Eastern Mediterranean between 1980 and 2010, whereas primary school completion was informative of coverage in Africa ($0.56$, $p<0.0001$) over the same period. The proportion of births attended by skilled health staff correlated significantly with immunisation coverage across many world regions.

Interpretation
Our vaccine performance index highlighted countries at risk of failing to achieve the GVAP target of 90% coverage by 2015, and could aid policy makers’ assessments of the strength and resilience of immunisation programmes. Weakening correlations with socioeconomic factors show a need to tackle vaccine confidence, whereas strengthening correlations point to clear factors to address.

Comment
A malaria vaccine in children with HIV
James G Beeson, Freya J I Fowkes

Plasmodium falciparum is the major cause of malaria cases and deaths globally, particularly in sub-Saharan Africa where HIV is also highly prevalent.1,2 The primary target population of a malaria vaccine is young children, and more than 2 million children in sub-Saharan Africa are infected with HIV.2 Therefore, many HIV-infected children could benefit from a malaria vaccine, especially because HIV might increase the risk and severity of malaria.3,4 In The Lancet Infectious Diseases, Lucas Otieno and colleagues5 now report the findings of a randomised controlled trial of RTS,S/AS01, the most advanced malaria vaccine, in HIV-infected children...

**Age of human papillomavirus vaccination?**
Philip E Castle, Emily A Burger

Evidence is overwhelming to show that prophylactic human papillomavirus (HPV) vaccines are very safe and highly efficacious in the prevention of HPV infections and related cervical precancerous lesions detected by cytology in clinical trials and HPV-vaccinated populations. These precancerous lesions, when detected by cytology and treated in a timely manner, have been credited with reductions in cervical cancer incidence and mortality. Thus, it is simply a matter of time before HPV vaccination will be shown to reduce cervical cancer and other HPV-related cancers...

**Comparison of artemisinin–mefloquine and artemether–lumefantrine fixed-dose combinations for treatment of uncomplicated Plasmodium falciparum malaria in children younger than 5 years in sub-Saharan Africa: a randomised, multicentre, phase 4 trial**

1123
Open Access

Summary
Background

WHO recommends combinations of an artemisinin derivative plus an antimalarial drug of longer half-life as treatment options for uncomplicated Plasmodium falciparum infection. In Africa, artemether–lumefantrine is the most widely used artemisinin-based combination therapy, whereas artemisinin–mefloquine is used infrequently because of a perceived poor tolerance to mefloquine. WHO recommends reconsideration of the use of artemisinin–mefloquine in Africa. We compared the efficacy and safety of fixed-dose artemisinin–mefloquine with that of artemether–lumefantrine for treatment of children younger than 5 years with uncomplicated *P falciparum* malaria.

Methods

We did this multicentre, phase 4, open-label, non-inferiority trial in Burkina Faso, Kenya, and Tanzania. Children aged 6–59 months with uncomplicated malaria were randomly assigned (1:1), via a computer-generated randomisation list, to receive 3 days' treatment with either one or two artemisinin–mefloquine tablets (25 mg artemisinin and 55 mg mefloquine) once a day or one or two artemether–lumefantrine tablets (20 mg artemether and 120 mg lumefantrine) twice a day. Parasitological assessments were done independently by two microscopists who were blinded to treatment allocation. The primary outcome was the PCR-corrected rate of adequate clinical and parasitological response (ACPR) at day 63 in the per-protocol population. Non-inferiority was shown if the lower limit of the 95% CI for the difference between groups was greater than −5%. Early vomiting was monitored and neuropsychiatric status assessed regularly during follow-up. This study is registered with ISRCTN, number ISRCTN17472707, and the Pan African Clinical Trials Registry, number PACTR201202000278282.

Findings

945 children were enrolled and randomised, 473 to artemisinin–mefloquine and 472 to artemether–lumefantrine. The per-protocol population consisted of 407 children in each group. The PCR-corrected ACPR rate at day 63 was 90·9% (370 patients) in the artemisinin–
mefloquine group and 89.7% (365 patients) in the artemether–lumefantrine group (treatment difference 1.23%, 95% CI −2.84% to 5.29%). At 72 h after the start of treatment, no child had detectable parasitaemia and less than 6% had fever, with a similar number in each group (21 in the artesunate–mefloquine group vs 24 in the artemether–lumefantrine group). The safety profiles of artesunate–mefloquine and artemether–lumefantrine were similar, with low rates of early vomiting (71 [15.3%] of 463 patients in the artesunate–mefloquine group vs 79 [16.8%] of 471 patients in the artemether–lumefantrine group in any of the three dosing days), few neurological adverse events (ten [2.1%] of 468 vs five [1.1%] of 465), and no detectable psychiatric adverse events.

Interpretation
Artesunate–mefloquine is effective and safe, and an important treatment option, for children younger than 5 years with uncomplicated P falciparum malaria in Africa.

Safety and immunogenicity of RTS,S/AS01 malaria vaccine in infants and children with WHO stage 1 or 2 HIV disease: a randomised, double-blind, controlled trial
Lucas Otieno, Martina Oneko, Walter Otieno, Joseph Abudha, Emmanuel Owino, Chris Odero, Yolanda Guerra Mendoza, Ben Andagalu, Norbert Awino, Karen Ivinson, Dirk Heerwegh, Nekoye Otsyula, Maria Oziemkowska, Effua Abigail Usuf, Allan Otieno, Kephas Otieno, Didier Leboulleux, Amanda Leach, Janet Oyieko, Laurence Slutsker, Marc Lievens, Jessica Cowden, Didier Lapierre, Simon Kariuki, Bernhards Ogutu, Johan Vekemans, Mary J Hamel

Summary
Background
Malaria remains a major global public health concern, especially in sub-Saharan Africa. The RTS,S/AS01 malaria candidate vaccine was reviewed by the European Medicines Agency and received a positive scientific opinion; WHO subsequently recommended pilot implementation in sub-Saharan African countries. Because malaria and HIV overlap geographically, HIV-infected children should be considered for RTS,S/AS01 vaccination. We therefore aimed to assess the safety of RTS,S/AS01 in HIV-infected children at two sites in western Kenya.

Methods
We did a randomised, double-blind, controlled trial at the clinical trial sites of the Kenya Medical Research Institute (KEMRI)–Walter Reed Army Institute of research in Kisumu and the KEMRI/US Centers for Disease Control and Prevention in Siaya. Eligible participants were infants and children aged from 6 weeks to 17 months with WHO stage 1 or 2 HIV disease (documented positive by DNA PCR), whether or not they were receiving antiretroviral therapy (ART). We randomly assigned participants (1:1) to receive three doses of either RTS,S/AS01 or rabies vaccine (both 0.5 mL per dose by intramuscular injection), given once per month at 0, 1, and 2 months. We did the treatment allocation using a web-based central randomisation system stratified by age (6 weeks–4 months, 5–17 months), and by baseline CD4% (<10, 10–14, 15–19, and ≥20). Data were obtained in an observer-blind manner, and the vaccine recipient, their parent or carer, the funder, and investigators responsible for the assessment of endpoints were all masked to treatment allocation (only staff responsible for the preparation and administration of the vaccines were aware of the assignment and these individuals played no other role in the study). We provided ART, even if the participants were not receiving ART before the study, and
daily co-trimoxazole for prevention of opportunistic infections. The primary outcome was the occurrence of serious adverse events until 14 months after dose 1 of the vaccine, assessed in the intention-to-treat population. This trial was registered at ClinicalTrials.gov, number NCT01148459.

Findings
Between July 30, 2010, and May 24, 2013, we enrolled 200 children to our study and randomly assigned 99 to receive RTS,S/AS01 and 101 to receive rabies vaccine. 177 (89%) of the 200 children enrolled completed 14 months of follow-up. Serious adverse events were noted in 41 (41·4%, 95% CI 31·6–51·8) of 99 RTS,S/AS01 recipients and 37 (36·6%, 27·3–46·8) of 101 rabies-vaccine recipients (relative risk 1·1, 95% CI 0·8–1·6). 20 (20·2%, 95% CI 12·8–29·5) of 99 RTS,S/AS01 recipients and 12 (11·9%, 6·3–19·8) of 101 rabies-vaccine recipients had at least one serious adverse event within 30 days after vaccination, mainly pneumonia, febrile convulsions, and salmonella sepsis. Five (5·1%, 95% CI 1·7–11·4) of 99 RTS,S/AS01 recipients and four (4·0%, 1·1–9·8) of 101 rabies-vaccine recipients died, but no deaths were deemed related to vaccination. Mortality was associated with five cases of pneumonia (1% RTS,S/AS01 recipients vs 3% rabies-vaccine recipients), five cases of gastroenteritis (3% RTS,S/AS01 recipients vs 2% rabies-vaccine recipients), five cases of malnutrition (2% RTS,S/AS01 recipients vs 3% rabies-vaccine recipients), one case of sepsis (1% rabies-vaccine recipients), one case of Haemophilus influenza meningitis (1% rabies-vaccine recipients), and one case of tuberculosis (1% RTS,S/AS01 recipients).

Interpretation
RTS, S/AS01 was well tolerated when given to children with WHO clinical stage 1 or 2 HIV disease along with high antiretroviral and co-trimoxazole use. Children with HIV disease could be included in future RTS,S/AS01 vaccination programmes.

Efficacy, safety, and immunogenicity of the human papillomavirus 16/18 AS04-adjuvanted vaccine in women older than 25 years: 7-year follow-up of the phase 3, double-blind, randomised controlled VIVIANE study

Summary
Background
Although the risk of human papillomavirus (HPV) infection is greatest in young women, women older than 25 years remain at risk. We present data from the VIVIANE study of the HPV 16/18 AS04-adjuvanted vaccine in adult women after 7 years of follow-up.

Methods
In this phase 3, double-blind, randomised controlled trial, healthy women older than 25 years were enrolled (age stratified: 26–35 years, 36–45 years, and ≥46 years). Up to 15% in each age stratum had a history of HPV infection or disease. Women were randomly assigned (1:1) to receive HPV 16/18 vaccine or aluminium hydroxide control, with an internet-based system. The
primary endpoint was vaccine efficacy against 6-month persistent infection or cervical intraepithelial neoplasia grade 1 or greater (CIN1+) associated with HPV 16/18. We did analyses in the according-to-protocol cohort for efficacy and total vaccinated cohort. Data for the combined primary endpoint in the according-to-protocol cohort for efficacy were considered significant when the lower limit of the 96·2% CI around the point estimate was greater than 30%. For all other endpoints and cohorts, data were considered significant when the lower limit of the 96·2% CI was greater than 0%. This study is registered with ClinicalTrials.gov, number NCT00294047.

Findings
The first participant was enrolled on Feb 16, 2006, and the last study visit took place on Jan 29, 2014. 4407 women were in the according-to-protocol cohort for efficacy (n=2209 vaccine, n=2198 control) and 5747 women in the total vaccinated cohort (n=2877 vaccine, n=2870 control). At month 84, in women seronegative for the corresponding HPV type in the according-to-protocol cohort for efficacy, vaccine efficacy against 6-month persistent infection or CIN1+ associated with HPV 16/18 was significant in all age groups combined (90·5%, 96·2% CI 78·6–96·5). Vaccine efficacy against HPV 16/18-related cytological abnormalities (atypical squamous cells of undetermined significance and low-grade squamous intraepithelial lesion) and CIN1+ was also significant. We also noted significant cross-protective efficacy against 6-month persistent infection with HPV 31 (65·8%, 96·2% CI 24·9–85·8) and HPV 45 (70·7%, 96·2% CI 34·2–88·4). In the total vaccinated cohort, vaccine efficacy against CIN1+ irrespective of HPV was significant (22·9%, 96·2% CI 4·8–37·7). Serious adverse events related to vaccination occurred in five (0·2%) of 2877 women in the vaccine group and eight (0·3%) of 2870 women in the control group.

Interpretation
In women older than 25 years, the HPV 16/18 vaccine continues to protect against infections, cytological abnormalities, and lesions associated with HPV 16/18 and CIN1+ irrespective of HPV type, and infection with non-vaccine types HPV 31 and HPV 45 over 7 years of follow-up.

Review
Malaria elimination in India and regional implications
Kinley Wangdi, Michelle L Gatton, Gerard C Kelly, Cathy Banwell, Vas Dev, Archie C A Clements

Summary
The malaria situation in India is complex as a result of diverse socio-environmental conditions. India contributes a substantial burden of malaria outside sub-Saharan Africa, with the third highest Plasmodium vivax prevalence in the world. Successful malaria control in India is likely to enhance malaria elimination efforts in the region. Despite modest gains, there are many challenges for malaria elimination in India, including: varied patterns of malaria transmission in different parts of the country demanding area-specific control measures; intense malaria transmission fuelled by favourable climatic and environment factors; varying degrees of insecticide resistance of vectors; antimalarial drug resistance; a weak surveillance system; and poor national co-ordination of state programmes. Prevention and protection against malaria are low as a result of a weak health-care system, as well as financial and socioeconomic constraints. Additionally, the open borders of India provide a potential route of entry for artesunate-resistant parasites from southeast Asia. This situation calls for urgent dialogue around tackling malaria across borders—between India's states and neighbouring countries—through sharing of information and coordinated control and preventive measures, if we are to achieve the aim of malaria elimination in the region.

Letters  
Closing yield gaps in China by empowering smallholder farmers  
Weifeng Zhang, Guoxin Cao, Xiaolin Li, Hongyan Zhang, Chong Wang+ et al.
The authors report on attempts to increase the yield of smallholder farms in China using ten practices recommended by the Science and Technology Backyard for farming maize and wheat at county level.

Sustainably feeding the world’s growing population is a challenge1, 2, 3, and closing yield gaps (that is, differences between farmers’ yields and what are attainable for a given region)4, 5, 6 is a vital strategy to address this challenge3, 4, 7. The magnitude of yield gaps is particularly large in developing countries where smallholder farming dominates the agricultural landscape4, 7. Many factors and constraints interact to limit yields3, 4, 5, 6, 8, 9, 10, and progress in problem-solving to bring about changes at the ground level is rare. Here we present an innovative approach for enabling smallholders to achieve yield and economic gains sustainably via the Science and Technology Backyard (STB) platform. STB involves agricultural scientists living in villages among farmers, advancing participatory innovation and technology transfer, and garnering public and private support. We identified multifaceted yield-limiting factors involving agronomic, infrastructural, and socioeconomic conditions. When these limitations and farmers’ concerns were addressed, the farmers adopted recommended management practices, thereby improving production outcomes. In one region in China, the five-year average yield increased from 67.9% of the attainable level to 97.0% among 71 leading farmers, and from 62.8% to 79.6% countywide (93,074 households); this was accompanied by resource and economic benefits.

Measuring Outcomes in a Community Resilience Program: A New Metric for Evaluating Results at the Household Level

September 28, 2016 · Research Article

Community resilience programs require metrics for evaluation but none exist for measuring outcomes at the household and neighborhood level.

Objectives: We develop and describe a new index, the LACCDR index of community resilience, to examine how resilience varied across communities at baseline, prior to implementation of the Los Angeles County Community Disaster Resilience Project (LACCDR).

Methods: We surveyed 4700 adult residents in the sixteen LACCDR communities in English, Spanish and Korean. Each of the survey domains were selected a priori as outcome indicators aligned to the theoretical levers of community resilience. Survey questions were drawn and adapted from published studies and national surveys.

Results: Factor analysis demonstrated five separate factors composed from 18 items and explaining 46.7% of the variance. The factors were characterized as community engagement, emergency supplies, communication with neighbors, civic engagement, and collective efficacy.

Baseline results for the 16 communities are provided.

Conclusions: We conclude that the LACCDR community resilience index can be used to measure resilience program outcomes at the neighborhood and household levels.

Mass Casualty Decontamination Guidance and Psychosocial Aspects of CBRN Incident Management: A Review and Synthesis

September 27, 2016 · Research Article

Introduction: Mass casualty decontamination is an intervention employed by first responders at the scene of an incident involving noxious contaminants. Many countries have sought to address the challenge of decontaminating large numbers of affected casualties through the provision of rapidly deployable temporary showering structures, with accompanying decontamination protocols. In this paper we review decontamination guidance for emergency responders and associated research evidence, in order to establish to what extent psychosocial aspects of casualty management have been considered within these documents. The review focuses on five psychosocial aspects of incident management: likely public behaviour; responder management style; communication strategy; privacy/ modesty concerns; and vulnerable groups.
Methods: Two structured literature reviews were carried out; one to identify decontamination guidance documents for first responders, and another to identify evidence which is relevant to the understanding of the psychosocial aspects of mass decontamination. The guidance documents and relevant research were reviewed to identify whether the guidance documents contain information relating to psychosocial issues and where it exists, that the guidance is consistent with the existing evidence-base.

Results: Psychosocial aspects of incident management receive limited attention in current decontamination guidance. In addition, our review has identified a number of gaps and inconsistencies between guidance and research evidence. For each of the five areas we identify: what is currently presented in guidance documents, to what extent this is consistent with the existing research evidence and where it diverges. We present a series of evidence-based recommendations for updating decontamination guidance to address the psychosocial aspects of mass decontamination.

Conclusions: Effective communication and respect for casualties’ needs are critical in ensuring decontamination is completed quickly and effectively. We identify a number of areas requiring further research including: identifying effective methods for communicating in an emergency; better understanding of the needs of vulnerable groups during decontamination; effective training for emergency responders on psychosocial issues, and pre-incident public education for incidents involving emergency decontamination. It is essential that the psychosocial aspects of mass decontamination are not neglected in the pursuit of solely technical solutions.

Model-Informed Risk Assessment and Decision Making for an Emerging Infectious Disease in the Asia-Pacific Region

Robert Moss, Roslyn I. Hickson, Jodie McVernon, James M. McCaw, Krishna Hort, Jim Black, John R. Madden, Nhi H. Tran, Emma S. McBryde, Nicholas Geard

| published 23 Sep 2016 PLOS Neglected Tropical Diseases

http://dx.doi.org/10.1371/journal.pntd.0005018

Abstract

Background

Effective response to emerging infectious disease (EID) threats relies on health care systems that can detect and contain localised outbreaks before they reach a national or international scale. The Asia-Pacific region contains low and middle income countries in which the risk of EID outbreaks is elevated and whose health care systems may require international support to effectively detect and respond to such events. The absence of comprehensive data on populations, health care systems and disease characteristics in this region makes risk assessment and decisions about the provision of such support challenging.

Methodology/principal findings

We describe a mathematical modelling framework that can inform this process by integrating available data sources, systematically explore the effects of uncertainty, and provide estimates of outbreak risk under a range of intervention scenarios. We illustrate the use of this framework in the context of a potential importation of Ebola Virus Disease into the Asia-Pacific region. Results suggest that, across a wide range of plausible scenarios, preemptive interventions supporting the timely detection of early cases provide substantially greater reductions in the probability of large outbreaks than interventions that support health care system capacity after an outbreak has commenced.

Conclusions/significance

Our study demonstrates how, in the presence of substantial uncertainty about health care system infrastructure and other relevant aspects of disease control, mathematical models can be used to assess the constraints that limited resources place upon the ability of local health care systems to detect and respond to EID outbreaks in a timely and effective fashion. Our framework can help evaluate the relative impact of these constraints to identify resourcing priorities for health care system support, in order to inform principled and quantifiable decision making.

Author Summary

Low and middle income countries face a serious challenge when confronting emerging infectious disease (EID) threats. Their risk of experiencing outbreaks can be greater than in many high income countries, while their capacity to respond effectively may be constrained by competing demands on limited health care system resources. The globalised nature of health security argues for international support to improve local health care systems, but limited data makes risk assessment and decision making difficult. We propose a mathematical modelling framework that can help explore a variety of outbreak and intervention scenarios. Our framework can assist with the identification of constraints that limit the ability of local health care systems to detect and respond to EID outbreaks in a timely and effective fashion, and assess the relative importance of these constraints to help establish priorities for health care system support. We illustrate the use of our framework by considering the importation of Ebola into the Asia-Pacific region, with results emphasising the critical role played by effective surveillance in controlling localised outbreaks.
Human Capital, Values, and Attitudes of Persons Seeking Refuge in Austria in 2015

Abstract
Since its inception in 2010, the Arab Spring has evolved into a situation of violent conflict in many countries, leading to high levels of migration from the affected region. Given the social impact of the large number of individuals applying for asylum across Europe in 2015, it is important to study who these persons are in terms of their skills, motivations, and intentions. DiPAS (Displaced Persons in Austria Survey) aims to uncover the socio-demographic characteristics of the persons seeking refuge who arrived in Austria in 2015, mainly originating from Syria, Iraq and Afghanistan. Particular focus is on human capital, attitudes and values. This survey, the first of its kind in Austria and possibly in Europe, was carried out among adult displaced persons, mostly residing in Vienna, yielding 514 completed interviews. Information gathered on spouses and children allows for the analysis of 972 persons living in Austria, and of further 419 partners and children abroad. Results indicate that the surveyed population comprised mainly young families with children, particularly those coming from Syria and Iraq. Their educational level is high compared with the average level in their country of origin. A vast majority of respondents are Muslims, rating their religiosity at medium levels. Judging from stated attitudes towards gender equity, interviewed men seem to have more liberal attitudes than their compatriots. The majority of respondents do not intend to return to their home countries, mostly because of the perception of permanent threat. DiPAS provides data for political decision-making and the on-going societal dialogue. Its findings can help to inform assessments about the integration potential of the displaced population into the host society. In addition, the applied methodological technique and experiences during the fieldwork provide valuable insights on sampling asylum seekers and refugees in the current European context.

Innovation network
Daron Acemoglu, Ufuk Akcigit, and William R. Kerr
PNAS 2016 ; published ahead of print September 28, 2016, doi:10.1073/pnas.1613559113

Significance
We describe the strength and importance of the innovation network that links patenting technology fields together. We quantify that technological advances spill out of individual fields and enrich the work of neighboring technologies, but these spillovers are also localized and not universal. Thus, innovation advances in one part of the network can significantly impact nearby disciplines but rarely those very far away. We verify the strength and stable importance of the innovation network by showing how past innovations can predict future innovations in other fields over 10-y horizons. This better understanding of how scientific progress occurs and how
inventions build upon themselves is an important input to our depictions of the cumulative process of innovation and its economic growth consequences.

Abstract

Technological progress builds upon itself, with the expansion of invention in one domain propelling future work in linked fields. Our analysis uses 1.8 million US patents and their citation properties to map the innovation network and its strength. Past innovation network structures are calculated using citation patterns across technology classes during 1975–1994. The interaction of this preexisting network structure with patent growth in upstream technology fields has strong predictive power on future innovation after 1995. This pattern is consistent with the idea that when there is more past upstream innovation for a particular technology class to build on, then that technology class innovates more.

**Growing pains for global monitoring of societal events**
By Wei Wang, Ryan Kennedy, David Lazer, Naren Ramakrishnan
Science 30 Sep 2016 : 1502-1503 Restricted Access

**Summary**

There have been serious efforts over the past 40 years to use newspaper articles to create global-scale databases of events occurring in every corner of the world, to help understand and shape responses to global problems. Although most have been limited by the technology of the time (1) [see supplementary materials (SM)], two recent groundbreaking projects to provide global, real-time “event data” that take advantage of automated coding from news media have gained widespread recognition: International Crisis Early Warning System (ICEWS), maintained by Lockheed Martin, and Global Data on Events Language and Tone (GDELT), developed and maintained by Kalev Leetaru at Georgetown University (2, 3). The scale of these programs is unprecedented, and their promise has been reflected in the attention they have received from scholars, media, and governments. However, they suffer from major issues with respect to reliability and validity. Opportunities exist to use new methods and to develop an infrastructure that will yield robust and reliable “big data” to study global events—from conflict to ecological change (3).

Practice Notes
Implementing DDR in Settings of Ongoing Conflict: The Organization and Fragmentation of Armed Groups in the Democratic Republic of Congo (DRC)
Joanne Richards
Abstract
Although it is common for armed groups to splinter (or “fragment”) during contexts of multi-party civil war, current guidance on Disarmament, Demobilization, and Reintegration (DDR) does not address the challenges that arise when recalcitrant fighters, unwilling to report to DDR, break ranks and form new armed groups. This Practice Note addresses this issue, drawing lessons from the multi-party context of the DRC and from the experiences of former members of three armed groups: the Rally for Congolese Democracy-Goma (RCD-Goma), the National Congress for the Defense of the People (CNDP), and the DRC national army (FARDC). While the findings indicate that the fragmentation of armed groups may encourage desertion and subsequent participation in DDR, they also show that active armed groups may monitor DDR programs and track those who demobilize. Remobilization may follow, either as active armed groups target ex-combatants for forced re-recruitment or as ex-combatants remobilize in armed groups of their own choice. Given these dynamics, practitioners in settings of partial peace may find it useful to consider non-traditional methods of DDR such as the use of mobile patrols and mobile disarmament units. The temporary relocation of ex-combatants to safe areas free from armed groups, or to protected transitional assistance camps, may also help to minimize remobilization during the reintegration phase.

Sustainability for Shrinking Cities
Sustainability 2016, 8(9), 911; doi:10.3390/su8090911
by Dustin L. Herrmann, William D. Shuster, Audrey L. Mayer and Ahjond S. Garmestani
Received: 31 August 2016 / Accepted: 5 September 2016 / Published: 7 September 2016
Abstract
Shrinking cities are widespread throughout the world despite the rapidly increasing global urban population. These cities are attempting to transition to sustainable trajectories to improve the health and well-being of urban residents, to build their capacity to adapt to changing conditions and to cope with major events. The dynamics of shrinking cities are different than the dynamics of growing cities, and therefore intentional research and planning around creating sustainable
cities is needed for shrinking cities. We propose research that can be applied to shrinking cities by identifying parallel challenges in growing cities and translating urban research and planning that is specific to each city’s dynamics. In addition, we offer applications of panarchy concepts to this problem. The contributions to this Special Issue take on this forward-looking planning task through drawing lessons for urban sustainability from shrinking cities, or translating general lessons from urban research to the context of shrinking cities.

**Analyzing Forces to the Financial Contribution of Local Governments to Sustainable Development**

by Manuel Pedro Rodríguez Bolívar, Andrés Navarro Galera, Laura Alcaide Muñoz and María Deseada López Subires

Sustainability 2016, 8(9), 925; doi:10.3390/su8090925

Received: 5 June 2016 / Revised: 2 September 2016 / Accepted: 6 September 2016 / Published: 10 September 2016

**Abstract**

In many countries, the economic crisis brought high volumes of deficit and debt in public entities, which jeopardized the ability of governments to continue providing public services and caused considerable imbalances of economic growth in different regions. In this context, from the recognition of the linkage between economic development and efficiency in public management, previous research indicates that local governments are called to play a key role in promoting sustainable development through environment, economic and social policies based on financial sustainability of the public services. This paper aims to identify influencing factors on the financial sustainability of local governments, as an indicator of their capacity to maintain the delivery of public services over time. Based on a sample of 139 Spanish municipalities with large population for the period 2006–2014, our findings reveal the influence of variables such as the unemployment rate by sector, the dependent population, the immigrant population and the level of education of the population, on the financial sustainability in local governments, providing new useful knowledge to managers, policymakers, researchers and other stakeholders interested in the sustainability of public services.

**Contribution of Forest Restoration to Rural Livelihoods and Household Income in Indonesia**

by Nayu Nuringdati Widianingsih, Ida Theilade and Mariève Pouliot

Sustainability 2016, 8(9), 835; doi:10.3390/su8090835

Received: 31 May 2016 / Revised: 13 August 2016 / Accepted: 16 August 2016 / Published: 24 August 2016

**Abstract**

Forest resources remain vital to the survival of many rural communities, though the level of forest reliance varies across a range of sites and socio-economic settings. This article investigates variation in forest utilization across households in three ethnic groups living near a forest restoration area in Sumatra, Indonesia. Survey data were collected on 268 households, with a four-month recall period and three repeat visits to each selected household within a year. Random sampling was applied to select households in five villages and five Batin Sembilan (indigenous) semi-nomadic groups. Sampled households belonged to three ethnic groups: 15% were Batin Sembilan, 40% Local Malayan, and 45% Immigrant households. Indigenous households displayed the highest reliance on forests: 36% of their annual total income came from this source, as compared with 10% and 8% for Local and Immigrant households,
respectively. Our findings showed that the livelihoods of indigenous groups were still intricately linked with forest resources, despite a rapid landscape-wide transition from natural forest to oil palm and timber plantations.

**Improving Farming Practices for Sustainable Soil Use in the Humid Tropics and Rainforest Ecosystem Health**

by Emanoel Gomes de Moura, Christoph Gehring, Heder Braun, Altamiro de Souza Lima Ferraz Junior, Fabricio de Oliveira Reis and Alana das Chagas Ferreira Aguiar

*Sustainability* 2016, 8(9), 841; doi:10.3390/su8090841

Received: 25 April 2016 / Revised: 17 August 2016 / Accepted: 19 August 2016 / Published: 29 August 2016

**Abstract**

Unsustainable farming practices such as shifting cultivation and slash-and-burn agriculture in the humid tropics threaten the preservation of the rainforest and the health of the local and global environment. In weathered soils prone to cohesion in humid tropic due to low Fe and carbon content and the enormous amounts of P that can be adsorbed, sustainable soil use is heavily dependent on the availability and efficient use of nutrients. This paper reviews the literature in the field and provides some insights about sustainable soil use in the humid tropics, mainly for the Brazilian Amazonia region. Careful management of organic matter and physical and chemical indicators is necessary to enhance root growth and nutrient uptake. To improve the rootability of the arable layer, a combination of gypsum with continuous mulching to increase the labile organic matter fraction responsible for the formation of a short-lived structure important for root growth is recommended, rather than tillage. Unlike mulching, mechanical disturbance via ploughing of Amazonian soils causes very rapid and permanent soil organic matter losses and often results in permanent recompaction and land degradation or anthropic savannization; thus, it should be avoided. Unlike in other regions, like southeast Brazil, saturating the soil solely with inorganic potassium and nitrogen soluble fertilizers is not recommended. Nutrient retention in the root zone can be enhanced if nutrients are added in a slow-release form and if biologically mediated processes are used for nutrient release, as occurs in green manure. Therefore, an alternative that favors using local resources to increase the supply of nutrients and offset processes that impair the efficiency of nutrient use must be pursued.

**A Social-Ecological Framework for Urban Stewardship Network Research to Promote Sustainable and Resilient Cities**

by Michele Romolini, R. Patrick Bixler and J. Morgan Grove

*Sustainability* 2016, 8(9), 956; doi:10.3390/su8090956

Received: 20 May 2016 / Revised: 16 August 2016 / Accepted: 14 September 2016 / Published: 20 September 2016

**Abstract**

To realize more sustainable and resilient urban social-ecological systems, there is great need for active engagement from diverse public agencies, non-profit organizations, businesses, natural resource managers, scientists, and other actors. Cities present unique challenges and opportunities for sustainability and resilience, as issues and organizations are frequently intertwined in networks of relations. Understanding and leveraging the range of knowledge types, motivations, skills, and goals of diverse participants and their networks is fundamental to **
sustainable and resilient cities. As efforts to examine and understand urban stewardship networks continue to emerge, it is increasingly clear that there are no structured or systematic frameworks to guide the integration of social and ecological phenomena. Such a framework could facilitate planning new urban stewardship network research, and provide a basis for comparisons among cities and their urban stewardship networks. In this paper, we develop and present a social-ecological framework for examining and understanding urban stewardship networks. To illustrate this framework and provide examples of its prospective and evaluative utility, we use examples from the U.S. Forest Service’s Stewardship Mapping (STEW-MAP) network in the United States from Baltimore, MD, USA, New York City, NY, USA, San Juan, Puerto Rico, USA, and Seattle, WA, USA.

**Advancing Empirical Approaches to the Concept of Resilience: A Critical Examination of Panarchy, Ecological Information, and Statistical Evidence**

by Ali Kharrazi, Brian D. Fath and Harald Katzmaier

Sustainability 2016, 8(9), 935; doi:10.3390/su8090935

Received: 11 April 2016 / Revised: 19 August 2016 / Accepted: 22 August 2016 / Published: 13 September 2016

**Abstract**

Despite its ambiguities, the concept of resilience is of critical importance to researchers, practitioners, and policy-makers in dealing with dynamic socio-ecological systems. In this paper, we critically examine the three empirical approaches of (i) panarchy; (ii) ecological information-based network analysis; and (iii) statistical evidence of resilience to three criteria determined for achieving a comprehensive understanding and application of this concept. These criteria are the ability: (1) to reflect a system’s adaptability to shocks; (2) to integrate social and environmental dimensions; and (3) to evaluate system-level trade-offs. Our findings show that none of the three currently applied approaches are strong in handling all three criteria. Panarchy is strong in the first two criteria but has difficulty with normative trade-offs. The ecological information-based approach is strongest in evaluating trade-offs but relies on common dimensions that lead to oversimplifications in integrating the social and environmental dimensions. Statistical evidence provides suggestions that are simplest and easiest to act upon but are generally weak in all three criteria. This analysis confirms the value of these approaches in specific instances but also the need for further research in advancing empirical approaches to the concept of resilience.

Project Report

**Sustainable Digitalization of Cultural Heritage—Report on Initiatives and Projects in Brandenburg, Germany**

by Ulf Preuss

Sustainability 2016, 8(9), 891; doi:10.3390/su8090891

Received: 31 May 2016 / Revised: 16 July 2016 / Accepted: 16 August 2016 / Published: 3 September 2016

**Abstract**

While digitalization opens up new possibilities for cultural heritage and tourism it also brings new challenges. Initiatives such as “Europeana”, an internet portal for cultural heritage within the European Union, support institutions with the display of their collections. National initiatives complement these efforts. This report describes initiatives and projects for generating and sustaining digital cultural heritage resources in the German state of Brandenburg. With the cultural heritage distributed throughout the state and managed by hundreds of institutions, the
task of digitalization is a common challenge for all of these institutions. Digitalization and digital sustainability is limited by shortcomings in areas of human resources, knowledge and IT infrastructure. In light of these limitations, the cultural heritage community addresses challenges with an interdisciplinary approach. It is based on a collaborative model with four levels: (1) a statewide strategy of an interdisciplinary task force; (2) cooperative projects; (3) cooperative IT infrastructure; and (4) an overall coordination. The priorities are: (1) creating and displaying digital content; (2) establishing best practices and workflows; (3) developing cooperative infrastructures for sustainment. Since 2012, several projects have been implemented based on that collaborative model. More than 50 participating institutions benefited from cooperative planning, managing, digitizing and digital presentation. With regard to the third priority, the task force’s next step is finding solutions for digital preservation. Considering the lack of funding and resources in the cultural heritage sector, options for creating and sustaining digital resources are limited. Digital cultural heritage requires interdisciplinary thinking, cooperative initiatives, reliable IT infrastructures and additional funding.

Sport Aims for the Goals
It is well known that physical activity improves personal health and well-being, but the benefits of sport to society are less apparent. This issue of the Chronicle explores the ways in which sport can enable individuals and communities to build a stronger, more harmonious world.
