The Sentinel

Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development

Week ending 22 October 2016

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortia and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel’s geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is a service of the Center for Governance, Evidence, Ethics, Policy & Practice, a program of the GE2P2 Global Foundation, which is solely responsible for its content. Comments and suggestions should be directed to:

David R. Curry

these broad themes is a challenge and we appreciate your observations and ideas in this regard. This is not intended to be a "news and events" digest.

Editor’s Note:
Last week, Burundi and South Africa, in separate actions, took steps to withdraw from the International Criminal Court (ICC). The ICC’s response to these historic decisions is below.

**President of the Assembly regrets withdrawal of any State Party from the Rome Statute and reaffirms the Court’s fight against impunity**
International Criminal Court (ICC) - Press Release
22 October 2016  ICC-CPI-20161021-PR1248

On 21 October 2016, the Government of the Republic of South Africa deposited its instrument of withdrawal from the Rome Statute ("Statute"), the founding treaty of the International Criminal Court ("ICC"), with the Secretary General of the United Nations. The decision comes in the wake of the withdrawal process recently initiated by Burundi.

In this regard, the President of the Assembly of States Parties to the Rome Statute of the International Criminal Court, Mr. Sidiki Kaba, indicated: "Although withdrawing from a treaty is a sovereign act, I regret these decisions and invite South Africa and Burundi to reconsider their positions." "I urge them to work together with other States in the fight against impunity, which often causes massive violations of human rights," he added.

The President of the Assembly is concerned that this disturbing signal would open the way to other African States withdrawing from the Rome Statute, thus weakening the only permanent international criminal court in charge of prosecuting the most serious crimes that shock the conscience of humanity, namely genocide, war crimes, crimes against humanity and crimes of aggression. For Mr. Kaba, the international community must remain united to face the enormous challenge of preventing the commission of such crimes, prosecuting the alleged perpetrators, whoever they are and wherever they are, to ensure peace, stability and security of our States.

Mr. Sidiki Kaba reiterates that the International Criminal Court needs the strong support of the international community and the cooperation of States to ensure its effectiveness and strengthen its credibility. In concluding, he calls upon all States parties to remain active members and other States to ratify the Rome Statute in order to ensure the right to universal justice to all victims of mass crimes.

UNOG- **REGULAR PRESS BRIEFING BY THE INFORMATION SERVICE**
21 October 2016

[Editor’s text bolding]

...Burundi

In response to a question, Ms. Shamdasani said that **OHCHR deeply regretted Burundi’s**
decision to leave the International Criminal Court. That had come after the
Government had also indicated its decision not to cooperate with OHCHR in Burundi.

The High Commissioner had met with the Burundian authorities to try to speak to them about
those issues and help them understand that OHCHR presence in the country was there to help
promote and protect human rights in Burundi. OHCHR had had quite a good relationship with
the Government prior to this, in spite of the crisis in the country. The Government had allowed
OHCHR access to detention centres and OHCHR had persuaded the Government to free several
political prisoners. OHCHR stressed the need for international accountability for crimes of an
international level.

OHCHR certainly encouraged other countries not to follow suit. The setting up of the ICC had
been a huge victory for international justice for crimes that had shocked the human conscience.
OHCHR urged countries not to take a step back.

In response to another question, she said that the Human Rights Council members could not
decide to expel a Council member themselves, and that it would have to be a decision of the
General Assembly. Rolando Gomez, Spokesperson for the Human Rights Council had circulated
a note to that effect. The High Commissioner had expressed his deep concerns publicly and
privately, and had spoken to the President of the Human Rights Council, but it was a matter for
Member States. OHCHR would encourage all Member States of the UN to cooperate with any
efforts towards international justice. The reason behind the creation of those international
mechanisms was the kinds of war crimes, genocide and crimes against humanity that had
shocked the world’s conscience, and those organizations had shown time and again their ability
to deliver justice where the countries concerned were unable or unwilling to do so...

Syria - Aleppo

Editor’s Note:
Following a number of recent Security Council sessions which have seen strained debate on
the crisis in Syria, and more particularly the situation in Aleppo, some 70 member states
requested a special informal meeting of the General Assembly to engage the situation. A link to
the video record of the extraordinary three-hour meeting held on 20 October 2016 is below.

Also last week, the Human Rights Council took up the situation in Aleppo, debating and then
adopting a resolution A/HRC/29/25/L.1 calling for a cessation of hostilities, among other actions
described below.

Briefing on the situation in Syria - General Assembly, informal meeting, 71st session
[Video:: 3:00:34]
20 Oct 2016 - Informal meeting of the General Assembly to hear a briefing by the Secretary-
General and his Special Envoy on Syria, Mr. Staffan de Mistura, on the situation in Syria.

Human Rights Council concludes Special Session on the deteriorating situation of
human rights in the Syrian Arab Republic, and the recent situation in Aleppo
GENEVA (21 October 2016) - The Human Rights Council this afternoon concluded its Special Session on the deteriorating situation of human rights in the Syrian Arab Republic, and the recent situation in Aleppo, after requesting the Independent International Commission of Inquiry on the Syrian Arab Republic to conduct a comprehensive, independent special inquiry into the events in Aleppo, and identify all those responsible for alleged violations and abuses of international human rights law.

In the resolution - A/HRC/S-25/L.1 - adopted by a vote of 24 in favour, seven against and 16 abstentions, the Council welcomed any genuine steps to improve the humanitarian situation in Aleppo and the decision of the Secretary-General to establish an internal United Nations board of inquiry on the incident involving the bombing of a United Nations-Syrian Arab Red Crescent relief operation to Urum al-Kubra, in the Syrian Arab Republic, on 19 September 2016.

The Human Rights Council urged the immediate implementation of the cessation of hostilities, and demanded that the regime and its allies put an immediate end to all aerial bombardments of and military flights over Aleppo city. The Council demanded that all parties, in particular the Syrian authorities and its supporters, promptly allowed rapid, safe, unhindered and sustained humanitarian access, including across conflict lines and borders.

The Council requested the Independent International Commission of Inquiry on the Syrian Arab Republic to conduct a comprehensive, independent special inquiry into the events in Aleppo, and identify all those responsible for alleged violations and abuses of international human rights law. It further requested the Commission of Inquiry to support efforts to ensure that perpetrators of alleged abuses and violations were held accountable, and to provide a full report of the findings of its special inquiry to the Human Rights Council no later than its thirty-fourth session.

The opening meeting of the Special Session heard keynote statements by Zeid Ra’ad Al Hussein, United Nations High Commissioner for Human Rights, in a video message; Paulo Sérgio Pinheiro, Chair of the Independent International Commission of Inquiry on the Syrian Arab Republic; and Catalina Devandas Aguilar, Member of the Coordination Committee of Special Procedures, speaking on behalf of the Coordination Committee of Special Procedures of the Human Rights Council; as well as a statement by Syria, the concerned country.

A summary of their statements and the debate can be found here and here.

UNOG- REGULAR PRESS BRIEFING BY THE INFORMATION SERVICE
21 October 2016
[Excerpt]
Syria
Jens Laerke, for the Office for the Coordination of Humanitarian Affairs (OCHA), said that medical evacuations of sick and injured people could unfortunately not commence this morning in east Aleppo as planned, because the necessary conditions were not in place to ensure safe, secure and voluntary evacuation of the sick and critically wounded people and their families.
The UN and its humanitarian partners were present and ready in west Aleppo to carry out the UN plan for medical evacuations as soon as conditions allowed. He reiterated that the UN was not involved in any way in any proposed evacuation of other civilians from eastern Aleppo, related to the announcement by the Russian Federation. The UN plan was a strictly humanitarian initiative and separate from other initiatives at the political level. The UN continued to push for full humanitarian access to besieged eastern Aleppo to provide urgently needed supplies for the civilian population, which was part of the UN’s four-day plan of operations during the window offered by the unilateral pause announced by the Russian Federation, which had begun on 20 October. Humanitarian supplies had been prepared, as well as medicines and medical supplies, so that they could proceed as soon as approval from all parties would be granted.

The UN continued to urge all parties to the conflict and those with influence over them to come to an agreement so that the UN could provide assistance to some 275,000 people living under besiegement, and safely evacuate the sick and wounded so that they could get the life-saving medical care that they needed. People in eastern Aleppo had not been reached with UN assistance since early July 2016...

Mosul

UNDER-SECRETARY-GENERAL FOR HUMANITARIAN AFFAIRS AND EMERGENCY RELIEF COORDINATOR, STEPHEN O’BRIEN - STATEMENT ON IRAQ

New York, 16 October 2016

I am extremely concerned for the safety of up to 1.5 million people living in Mosul who may be impacted by military operations to retake the city from ISIL. Families are at extreme risk of being caught in cross-fire or targeted by snipers. Tens of thousands of Iraqi girls, boys, women and men may be under siege or held as human shields.

Thousands may be forcibly expelled or trapped between the fighting lines. Children, women, the elderly and disabled will be particularly vulnerable. Depending on the intensity and scope of the fighting, as many as one million people may be forced to flee their homes in a worst-case scenario.

I renew my call on all parties to the conflict to uphold their obligations under international humanitarian law to protect civilians and ensure they have access to the assistance they are entitled to and deserve. Nothing is more important.

Humanitarian partners will be doing everything possible to support the people who may be displaced and affected by this military operation. Shelter is currently available for 60,000 people in camps and emergency sites. Construction of additional sites, with capacity for 250,000 people, is underway. Food rations for 220,000 families are ready for distribution, 143,000 sets of emergency household items are in stock; latrines and showers are being readied for dispatch and 240 tonnes of medication are available at distribution points.

Despite generous contributions from donor countries, funding has been insufficient to prepare fully for the worst-case scenario. With the resources available, humanitarian...
partners have done their best to prepare as efficiently as possible. Working under some of the most difficult and insecure conditions in the world, humanitarian partners will be doing everything possible to help as many people as possible in the days and weeks ahead.

HABITAT III - NEW URBAN AGENDA
QUITO DECLARATION ON SUSTAINABLE CITIES AND HUMAN SETTLEMENTS FOR ALL
October 2016 :: 24 pages
[Excerpt]
...Our shared vision
11. We share a vision of cities for all, referring to the equal use and enjoyment of cities and human settlements, seeking to promote inclusivity and ensure that all inhabitants, of present and future generations, without discrimination of any kind, are able to inhabit and produce just, safe, healthy, accessible, affordable, resilient, and sustainable cities and human settlements, to foster prosperity and quality of life for all. We note the efforts of some national and local governments to enshrine this vision, referred to as right to the city, in their legislations, political declarations and charters.

12. We aim to achieve cities and human settlements where all persons are able to enjoy equal rights and opportunities, as well as their fundamental freedoms, guided by the purposes and principles of the Charter of the United Nations, including full respect for international law. In this regard, the New Urban Agenda is grounded in the Universal Declaration of Human Rights, international human rights treaties, the Millennium Declaration, and the 2005 World Summit Outcome. It is informed by other instruments such as the Declaration on the Right to Development.

13. We envisage cities and human settlements that:
   (a) fulfill their social function, including the social and ecological function of land, with a view to progressively achieve the full realization of the right to adequate housing, as a component of the right to an adequate standard of living, without discrimination, universal access to safe and affordable drinking water and sanitation, as well as equal access for all to public goods and quality services in areas such as food security and nutrition, health, education, infrastructure, mobility and transportation, energy, air quality, and livelihoods;

   (b) are participatory, promote civic engagement, engender a sense of belonging and ownership among all their inhabitants, prioritize safe, inclusive, accessible, green, and quality public spaces, friendly for families, enhance social and intergenerational interactions, cultural expressions, and political participation, as appropriate, and foster social cohesion, inclusion, and safety in peaceful and pluralistic societies, where the needs of all inhabitants are met, recognizing the specific needs of those in vulnerable situations;

   (c) achieve gender equality and empower all women and girls, ensuring women’s full and effective participation and equal rights in all fields and in leadership at all levels of decision-making, and by ensuring decent work and equal pay for equal work, or work of equal value for
all women, as well as preventing and eliminating all forms of discrimination, violence, and harassment against women and girls in private and public spaces;

(d) meet the challenges and opportunities of present and future sustained, inclusive, and sustainable economic growth, leveraging urbanization for structural transformation, high productivity, value-added activities, and resource efficiency, harnessing local economies, taking note of the contribution of the informal economy while supporting a sustainable transition to the formal economy;

(e) fulfill their territorial functions across administrative boundaries, and act as hubs and drivers for balanced sustainable and integrated urban and territorial development at all levels;

(f) promote age- and gender-responsive planning and investment for sustainable, safe, and accessible urban mobility for all and resource efficient transport systems for passengers and freight, effectively linking people, places, goods, services, and economic opportunities;

(g) adopt and implement disaster risk reduction and management, reduce vulnerability, build resilience and responsiveness to natural and man-made hazards, and foster mitigation and adaptation to climate change;

(h) protect, conserve, restore, and promote their ecosystems, water, natural habitats, and biodiversity, minimize their environmental impact, and change to sustainable consumption and production patterns...

Press Release
New Urban Agenda adopted at Habitat III
21 October 2016 – The United Nations Conference on Housing and Sustainable Urban Development has wrapped up in Quito, Ecuador, with delegations adopting the New Urban Agenda – a new framework that that lays out how cities should be planned and managed to best promote sustainable urbanization.

“We have analyzed and discussed the challenges that our cities are facing and have [agreed] on a common roadmap for the 20 years to come,” Joan Clos, Secretary-General of the conference and Executive Director of the UN Human Settlements Programme (UN-Habitat), told participants at the closing session.

The conference, hosted by the city of Quito drew around 36,000 people from 167 different countries over the past week and a reported 50,000 to the various associated exhibition areas. Clos said that the document should be seen as an extension of the 2030 Agenda for Sustainable Development, agreed by 193 Member States of the UN in September 2015.

That Agenda’s 17 Sustainable Development Goals (SDGs) recognized the power of cities and towns, which will constitute up to 70 per cent of the world population by 2050, to be the engine for sustainable growth in the future, a concept further emphasized in the New Urban Agenda. Habitat III brought together mayors, local and regional authorities, civil society and community groups, the private sector and urban planners.
In the sidelines of the formal discussions, dozens of side and parallel events brought partners together to debate the more intricate areas of urbanization, such as the right of women and youth to the city, the importance of public space and how to finance the New Urban Agenda. Above all, Clos said, the New Urban Agenda is: “A commitment that we will all together take the responsibility...[for the] direction of the development of our common urbanizing world.”…

The State of World Population 2016
UNFPA 2016 :: 116 pages

Press Release
UNFPA State of World Population 2016
20 October 2016
Investing in 10-year-old girls could yield huge demographic dividend, pump billions into national economies
:: Girls are less likely than boys to complete schooling and more likely to face forced marriage, child labour, female genital mutilation and other undermining practices.
:: More than half of the world’s 60 million 10-year-old girls live in the 48 countries with the worst gender inequality.
:: $21 billion a year dividend for developing countries can be unlocked if all 10-year-old girls complete secondary education.

UNITED NATIONS, New York—Forced marriage, child labour, female genital mutilation and other practices undermining girls’ health and rights threaten the world’s ambitious development agenda, warns UNFPA, the United Nations Population Fund, in The State of World Population 2016, released today...

The State of World Population report notes that of the 125 million 10-year-olds today, 60 million are girls who are systematically disadvantaged at the global level as they move through adolescence into adulthood. Girls are less likely than boys to complete formal schooling at the secondary and university levels, are more likely to be in poorer physical and mental health, and will find it harder to get paid jobs.

The range of proven policy options available to governments has grown over the past decade. These include banning harmful practices, such as child marriage and providing cash transfers to parents of girls in poor households to help defray costs of schooling, and, thus keep girls in school longer. They also include providing life-skills training and age-appropriate comprehensive sexuality education to girls approaching puberty.

The challenge now, UNFPA’s State of World Population report says, is to scale up these interventions to reach more girls, especially the poorest and most vulnerable, by age 10. “How we invest in and support 10-year-old girls today will determine what our world will look like in 2030,” Dr. Osotimehin says. “With support from family, community and nation, and the...
full realization of her rights, a 10-year-old girl can thrive and help bring about the future we all want.”

**Key statistics**
:: Nine out of 10 10-year-old girls live in developing countries, and one in five lives in a least developed country: one in five is in India, and one in eight in China.
:: Each year of education delivers an additional 11.7 per cent uplift in wages in later life for girls (compared with 9.6 per cent for men). Yet, 16 million girls between 6 and 11 will never start school, twice the number of boys.
:: If all the 10-year-old girls who drop out of school or do not attend school in developing countries completed secondary education, they would trigger a $21 billion annual dividend.
:: Ten per cent of 5-to-14 year-old girls do more than 28 hours of household chores per week, twice that of boys. Three in four girl labourers are unpaid.
:: Every day, an estimated 47,700 girls are married before 18.

**Monitoring Global Poverty - Report of the Commission on Global Poverty**
International Bank for Reconstruction and Development / The World Bank
2017 :: 263 pages

**Press Release**
World Bank’s Poverty Commission Releases Report on How to Better Measure and Monitor Global Poverty
WASHINGTON, October 18, 2016 – The World Bank’s Commission on Global Poverty has submitted recommendations on how to more comprehensively measure and monitor global poverty in support of the Bank Group’s goals of ending extreme poverty by 2030 and boosting shared prosperity.

“The aim of our Report was to improve the way the World Bank monitors poverty. By focusing on changes over time, we can learn, taking account of the potential margins of error, about the evolution of global poverty. The confidence to be placed in these conclusions can be increased by improvements in the methods of analysis and in the underlying data. Outside the World Bank, it is hoped that this report will be of value to everyone engaged in poverty measurement across the world, and be a highly positive force in encouraging partnerships,” said Sir Anthony Atkinson, Lead Author & Chair of the Commission on Global Poverty.

In its report, the Commission acknowledges the challenges posed by its recommendations, including the limited statistical resources available to poor countries, the need for collaboration across countries and agencies, and different national circumstances among low, and middle-income countries.

The Commission also recommends that the World Bank hold constant the yardstick for measuring extreme poverty – at $1.90 a day in 2011 PPPs - until 2030, the target year for the Bank’s own goal of ending poverty as well as the end-year for the Sustainable Development
Goals (SDGs), the first and foremost of which is the eradication of extreme poverty everywhere, in all its forms...

“Ending poverty is at the core of the World Bank’s development work. As we strive towards ending extreme poverty by 2030, the recommendations of the Commission on Global Poverty will inform how we measure progress in all dimensions of our work,” said World Bank Chief Economist, Paul Romer,” We are extremely thankful to the Commission for taking on this important task and providing its valuable recommendations.”

Romer said that the Bank agreed with the Commission’s call for the extreme poverty line to be cited as “the International Poverty Line (IPL)”, and expressed in each country in terms of its local currency. The Commission had also urged the Bank to “establish its own requirements with regard to the measurement of non-monetary poverty”, and to introduce a “multi-dimensional poverty indicator based on the counting approach, and covering the overlap of dimensions.”

In response, Romer said the World Bank would now track non-monetary deprivations of poverty in three specific domains, namely: educational outcomes; access to health care; and access to basic services, such as water, sanitation and electricity. He said the Bank was particularly interested in the overlap among these different deprivations, and between them and monetary poverty..

The Commission’s final report includes a set of 21 recommendations. Highlights include recommendations on broadening the conception of poverty to include non-monetary measures of deprivation; a suggestion to introduce a societal headcount measure of global poverty, which combines absolute and relative elements of poverty, and a recommendation to publish a global profile of the poor.

For a more detailed World Bank response to the recommendations of the Atkinson Commission, see the cover note ‘Monitoring Global Poverty: A Cover Note to the Report of the Commission on Global Poverty’

Health

UNICEF - Supply of children’s five-in-one vaccine secured at lowest-ever price
GENEVA, 19 October 2016 – Breakthrough prices have been achieved with six vaccine suppliers who offered to price pentavalent vaccine at an 84 cents a dose average – half the price that the UN children’s agency currently pays.

In the next three years, UNICEF will buy 450 million doses to send to 80 countries. Four hundred million doses will be allocated to Gavi-supported and transitioning countries. The vaccine will protect tens of millions of children from potentially deadly infections caused by diphtheria, tetanus, pertussis, hepatitis B and Haemophilus influenzae type b.
Since 2001, strong collaboration on market shaping across Gavi Alliance partners, including the Bill & Melinda Gates Foundation, WHO and UNICEF, has achieved an affordable and sustainable pentavalent vaccine supply for children in the world’s poorest countries.

The new pricing can also be accessed by governments who self-finance procurement of this cost-effective vaccine. It will generate over $366 million in savings for donors and for governments.

“Ninety per cent of the world’s children under five who die from vaccine-preventable diseases live in countries whose vaccine supply is no longer fully funded by donors,” said Shanelle Hall, Director of UNICEF’s supply and procurement headquarters. “For the most vulnerable children in the world, pricing can make a difference between life and death,” Hall added.

“Gavi estimates that 5.7 million deaths will be averted thanks to pentavalent vaccination in Gavi-supported countries between 2011 and 2020,” said Dr Seth Berkley, CEO of Gavi, the Vaccine Alliance. “The market for five-in-one vaccines is now a lot healthier than it was just a few years ago thanks to our collective efforts to grow a base of vaccine suppliers. We remain committed to making vaccine markets work better for the world’s poorest countries to ensure immunization investments and efforts are sustainable for all.”

Achieving milestones in making vaccines more affordable illustrates how collaborative engagement, including with vaccine suppliers, can result in vaccine markets that put children’s health first.

Careful monitoring of supply and demand in vaccine markets and consultations with vaccine manufacturers have helped determine the most effective actions to secure sufficient production levels and efficiencies of scale. Between 2001 and 2015, UNICEF’s pentavalent vaccine procurement jumped from 14.5 million to more than 235 million doses, mainly driven by the increase in demand in countries supported by Gavi.

Broadening the supplier base reduces the risk of supply shortages and other serious market constraints that could negatively impact children. Collaboration between Gavi, the Gates Foundation and UNICEF leveraged the significant donor funding and through multi-year supplier contracts, improved demand forecasts and special contracting terms, helped grow the pentavalent vaccine supplier base from one in 2001 to six by 2016, and reduce prices.

As additional manufacturers become interested in supplying vaccines to UNICEF, competition between them intensifies. Since 2011, UNICEF publishes the prices of all vaccines it procures, giving manufacturers the advantage of seeing what their competitors charge – and this had led to better offers. By 2016, the price for donor-funded and government self-funded pentavalent vaccines was an average of $1.65 a dose.

In 2016, a competitive pentavalent vaccine market and excess supply capacity represented ideal conditions to launch a new phased approach to tendering.

In the first phase, UNICEF invited interested suppliers to submit a proposed price. After making awards to the most competitive bids, UNICEF published prices and launched a second request for proposals, which gave time for suppliers to sharpen their initial offers. The final awards achieved lowest ever pricing while sustaining a healthy supply market for the longer-term.
“Today’s announcement demonstrates that partnerships can bring affordability and price sustainability to the table in supplier discussions, and this is transforming health outcomes for children,” said Hall.

NIH contributes to global effort to prevent and manage lung diseases [CLEAN COOKSTOVES]

Wednesday, October 19, 2016  U.S. National Institutes of Health

NIH-funded trial will measure health benefits of clean cookstoves.

Household air pollution created by using wood, coal and other solid fuels for cooking and heating homes is a leading cause of respiratory and cardiovascular diseases worldwide, and causes more than 4 million premature deaths each year, according to the World Health Organization (WHO). To tackle this global health problem, the National Institutes of Health (NIH), with partial support through a grant from the Bill & Melinda Gates Foundation, is funding a $30.5 million, multi-country trial to determine if using a widely available, clean, alternative cooking fuel significantly reduces deaths and illnesses, especially in women and children who suffer the greatest exposure. This is the first large-scale trial to investigate whether home use of cookstoves that run on liquefied petroleum gas (LPG) improve air quality sufficiently to provide measurable health benefits and can be effectively adopted in real world situations.

The five-year study is part of a broader international effort totaling more than $50 million to conduct research in 30 countries aimed at discovering how to prevent and manage chronic lung diseases. That initiative is being coordinated by the Global Alliance for Chronic Diseases (GACD), a coalition of the world’s largest public funders of health research.

“Indoor air pollution caused by cookstoves is one of the top health risks in developing countries, causing deaths from low birth weight among babies, pneumonia in young children, and heart and lung problems in adults,” said NIH Director Francis S. Collins, M.D., Ph.D. “By working with our global partners on alternative fuel solutions, we have an opportunity to reduce that risk significantly for millions of people.”

Three billion people worldwide rely on solid fuels for cooking and heating, according to the WHO. The resulting indoor pollution, which includes small particles that can lodge deep in the lungs, causes pneumonia, chronic lung disease, cardiovascular and heart disease, cancer and other conditions. Most solid fuel use occurs in low- and middle-income countries (LMICs), but also takes place in high-income countries, largely in rural areas.

The NIH award will enable researchers to conduct a randomized control trial of LPG cookstoves and fuel in four LMICs: India, Rwanda, Guatemala and Peru. U.S. investigators and their collaborators in the trial sites will follow pregnant women, their offspring and older women to provide evidence of the impact the alternative fuel has on household air pollution, child health and development, and adult chronic diseases. Emory University in Atlanta is leading the study...

IKEA Foundation to help Save the Children and MSF save thousands of children’s lives during catastrophic disasters
October 17, 2016
...Today the IKEA Foundation signed framework agreements with Save the Children and Médecins Sans Frontières (MSF) that will enable the organisations to access the funding they need right after a disaster strikes...

Protecting children in the deadliest disasters
The IKEA Foundation’s new agreement will give Save the Children access to up to €2 million within 72 hours of a category-one disaster—an extraordinary emergency affecting more than one million children and causing widespread destruction.

Save the Children will use the funding to quickly and efficiently help children and their families survive the unthinkable and begin to recover in the months that follow.

"Save the Children is tremendously excited to deepen our relationship with the IKEA Foundation, and even more so, to further our mutual commitment to do whatever it takes to save children’s lives in emergencies around the world. Quite simply, rapid response save children’s lives. This partnership, allowing for substantial and immediate funding of emergency response, allows us the flexibility to immediately begin our work on the ground. I hear repeatedly from seasoned response workers around the world that this is the kind of partnership we need to take humanitarian response to the next level. On behalf of Save the Children, I want to thank the IKEA Foundation for partnering with us and driving innovation in the sector”, said Daniele Timarco, Humanitarian Director Save the Children.

Providing medical care during “unseen” disasters
...Thanks to this new agreement with the IKEA Foundation, MSF will be able to access emergency grants of up to €3 million to help children and their families survive these disasters.

“Emergency humanitarian action often happens in places the world seems to have forgotten, in places that are hard to reach for journalists,” explains Bruno Jochum, General Director of Médecins Sans Frontières. “The IKEA Foundation grants will help our teams provide lifesaving medical care and, in so doing, show the families caught in these crises that we’re trying to support them in their time of greatest need.”...

Mosul: ISIL use of ‘human shields’ underscores need to protect civilians – Zeid

GENEVA (21 October 2016) – UN High Commissioner for Human Rights Zeid Ra’ad Al Hussein called for the protection of civilians to be at the forefront of military planning as the Iraqi Government and associated forces attempt to re-take Mosul, amid reports that fighters from the so-called Islamic State of Iraq and the Levant, ISIL, are using civilians as human shields.

“We are gravely worried by reports that ISIL is using civilians in and around Mosul as human shields as the Iraqi forces advance, keeping civilians close to their offices or places where fighters are located, which may result in civilian casualties,” said Zeid. “We therefore welcome the public statements by Iraq’s leaders that the utmost efforts will be made to protect civilians, as required by international humanitarian law.”

The High Commissioner voiced particular concern regarding the women, children and men held captive by ISIL, especially those from ethnic or religious communities who are at extreme risk. “There is a grave danger that ISIL fighters will not only use such vulnerable people as human shields but may opt to kill them rather than see them liberated,” he said...

Press statement
BRICS countries underline the imperative of advancing cooperation and action on HIV and tuberculosis

GENEVA, 17 October 2016—At the close of the 2016 BRICS Summit in Goa, India, leaders of the BRICS countries (Brazil, the Russian Federation, India, China and South Africa) have underlined the imperative of advancing cooperation and action to respond to the epidemics of HIV and tuberculosis.

In their declaration, the leaders emphasized the importance of cooperation among BRICS countries in promoting the research and development of local pharmaceuticals and diagnostic tools in order to facilitate access to safe, effective, quality and affordable medicines.

The Goa Declaration, issued at the end of the two-day summit, also took note of efforts made by BRICS health ministers to achieve the 90–90–90 targets by 2020, whereby 90% of people living with HIV will know their HIV status, 90% of people who know their HIV-positive status will access treatment and 90% of people on treatment will have suppressed viral loads. The declaration also noted the United Nations High-Level Meeting on Ending AIDS, which took place in New York, United States of America, in June 2016, at which countries committed to following a Fast-Track response to ending the AIDS epidemic by 2030...

Habitat III: Promoting accessible and inclusive cities for all
"The 2030 Agenda for Sustainable Development highlights the importance of the inclusion of disability in urban development," UN DESA's Under-Secretary-General Wu Hongbo said as he addressed the opening of the High Level Forum on Disability Inclusion and Accessible Urban Development, which took place on the eve of the UN Conference on Housing and Sustainable Human Settlements (Habitat III) in Quito, Ecuador, on 16 October.
Bringing together more than 100 global urban planning and disability experts, the event honed in on finding solutions to make urban development inclusive of and accessible to the world's one billion persons with disabilities, many of whom live in cities.
Aimed at supporting States and related stakeholders in jointly advancing accessible and inclusive urban development, the event resulted in a set of key recommendations to build inclusive and accessible cities and implement the New Urban Agenda for all, including persons with disabilities.
17 October 2016, New York

United Nations urges commitment to fight humiliation and exclusion to end poverty

Marking the 24th anniversary of the International Day for the Eradication of Poverty (IDEP), the United Nations today underscored the need to recognize and address the humiliation and exclusion endured by many people living in poverty.

“As we work together to honor our pledge to build a life of peace, prosperity and dignity for all, we must recognize that prejudice and discrimination seriously impede our efforts,” said UN Secretary-General Ban Ki-moon. “To end poverty, we must commit to respect and defend the human rights of all people and end the humiliation and social exclusion that the poor face every day.”

At the start of the battle for Mosul, UNESCO Director-General declares protection of heritage and human lives are inseparable

Monday 17 October – As the Government of Iraq has announced the launch of a major offensive on Mosul, I wish to reiterate UNESCO’s support to the population of Mosul, women, men and children who have suffered from violence and persecution over the past years, and who still are suffering. Nineveh (Mosul) is also one of the oldest cities of Mesopotamia, whose memory has been transmitted for centuries by people of all origins and all religions as a world symbol of dialogue between cultures and a medium of identity and memory for the Iraqi people. I call on all involved in military action to protect cultural heritage and refrain from any military use or targeting of cultural sites and monuments, in respect of obligations under international treaties...

http://www.icao.int/Newsroom/Pages/pressrelease.aspx  
20/10/16
New UN agreement to foster sustainable development synergies between air transport and urban development

Montréal and Quito, 20 October 2016 – A Memorandum of Understanding (MoU) enhancing the synergies between urban development and aviation has been signed in Quito by Dr. Fang Liu, the Secretary General of the International Civil Aviation Organization, and Dr. Joan Clos, the Executive Director of the United Nations Human Settlements Programme (UN-Habitat).

The signing took place on the occasion of the United Nations Conference on Housing and Sustainable Urban Development (HABITAT III).

The agreement is significant as sustainable civil aviation is in a position to make critical contributions to States’ achievement of the UN Agenda 2030 for Sustainable Development, provided certain conditions exist, such as the effective implementation of international standards, timely coordination with other sectors of the economy, and seamless integration between aviation and other modes of transportation. The MoU provides for UN-Habitat and ICAO to strengthen their cooperation with a view to advising States on technical and policy matters relating to aviation issues raised within the context of the sustainable integration of airports in urban areas and within national development programmes. It directly supports SDGs 9, 11, and 13, which respectively pertain to economic development, urban well-being, and climate change.

The relationship is reciprocal as urban conditions impact on aviation safety, navigation, efficiency, and security, and consequently the economic development of air connectivity and its environmental consequences...

Sustainable urban-industrial development can advance Sustainable Development Goals, says UNIDO Director General

VIENNA, 20 October 2016 – Sustainable urban-industrial development is key to achieving the Sustainable Development Goals (SDGs) and can only be done through enhanced connectivity and collaboration between cities, the private sector and development agencies.

This was UNIDO Director General LI Yong’s message as he addressed the “One-Belt-One-Road Inclusive and Sustainable City Exhibition and Dialogue” taking place in Vienna this week. With cities represented from across Asia, Europe and Africa, the event, which is based on the One-Belt-One-Road initiative, aims to catalyze the creation of innovative partnerships dedicated to achieving the 2030 Agenda and to attract investment for urban infrastructure development...

Reducing risk in intravenous delivery is the aim of new standard

Intravenous delivery of medication or other vital products can save lives. But mix-ups with connectors that mean the wrong product is delivered can have catastrophic consequences. A new standard for connectors with intravenous or hypodermic applications has just been published, complementing the series of standards dedicated to reducing risks in such medical settings.

*Statement by the IPU President, Visit to Ankara*

I am pleased to be in Ankara today, at the invitation of Mr. Ismail Kahraman, Speaker of the Grand National Assembly of Turkey. We have had substantive and productive discussions, and I very much look forward to our cooperation ahead. I have also had the opportunity to exchange views with a number of other senior parliamentary officials, including the Chair of the Committee on Equal Opportunities for Men and Women, the Chair of the Committee on Human Rights Inquiry and the Chair of the Ad Hoc Committee on the July 15 Coup Attempt.

I have used the opportunity to reiterate that the Inter-Parliamentary Union has condemned in the strongest possible terms the coup attempt in Turkey and the attack on Parliament on 15 July. Any attempt to interfere in the political process or accede to power through violence cannot be justified under any circumstances and should be clearly rejected...

**IRCT Symposium: Programme released**

21 October 2016

The programme for the 10th IRCT Scientific Symposium is now available and features 100 abstracts from authors around the world. Among the topics up for examination in the plenaries are, challenges facing the sector to evidence survivors’ rehabilitation needs, resourcing to meet survivor needs, a comparison of rehabilitation responses in contexts of widespread torture, survivor participation in research and treatment planning and challenges of mass influx and aligning service delivery. All highly relevant and timely issues that many of those working in the field are confronted with on a daily basis...

The event, which is the largest gathering of torture rehabilitation experts in a decade, will bring together clinicians, researchers, lawyers, funders and policy-makers. Up to 100 posters will be presented, and a rich cultural programme will give participants an opportunity to network at events such as a film screening and art exhibition...

The Symposium runs from 5 to 9 December in Mexico City and is co-hosted by IRCT member Colectivo Contra la Tortura y la Impunidad. Simultaneous Spanish translation will be available to all participants.

To explore the Symposium programme and secure your place at the event, visit www.irctsymposium2016.irct.org.

“Our staff are working round the clock to prepare for a mass exodus of families fleeing Mosul”, says NRC's Country Director in Iraq, Wolfgang Gressmann.

With the assault just launched by Iraqi forces to retake the city of Mosul, the Norwegian Refugee Council warns that the fate of some 1.2 million Iraqis is now in grave danger. "We fear that the humanitarian consequences of this operation will be massive, and our staff have been working round the clock to prepare for a mass exodus of families expected to seek safety and our humanitarian assistance," says NRC's Country Director in Iraq, Wolfgang Gressmann.

**Statement on Yemen Ceasefire**

International humanitarian organisations operating in Yemen welcome the recent announcement by the UN's Special Envoy to Yemen, Mr. Ismail Ould Cheikh Ahmed, regarding the commencement of a 72-hour ceasefire on Wednesday 19 October at 23:59. We further welcome recent diplomatic efforts by the international community to support this and hope that it will pave the way for a permanent cessation of hostilities and an inclusive resolution to the conflict.

However, the recent spike in violence and heightened tensions do not bode well for the success of this ceasefire. Previous attempted ceasefires have – at best – resulted in a partial reduction in violence in only some areas. We therefore implore all parties to the conflict to abide by the terms of the ceasefire and to resume peace negotiations.

The war in Yemen started over a year and a half ago and has resulted in severe and widespread human suffering. Over 4000 civilians have been killed and more than 7000 injured as a direct result of the conflict. With over three million people forced from their homes and close to half the population facing hunger, an end to the conflict is long overdue.

*The International Non-Governmental Organisations behind this statement are Action Contre La Faim, ADRA, CARE, Danish Refugee Council, Intersos, Mercy Corps, Norwegian Refugee Council, Oxfam, Save the Children, and World Relief Germany.*

Funded by WfWI, New Women’s Center Opens in Northern Iraq
WfWI’s partner, Free Yezidi Foundation (FYF), based at the Khanke IDP camp in the Duhok Province in Kurdistan Region of Iraq (KRI), caters to the needs of 640 Yezidi women, most of whom are former ISIS hostages.
Funded by WfWI, FYF’s women’s center provides vocational training (tailoring, beauty and hairdressing, and English and Kurdish language and computer skills), business skills training and mentoring, women’s rights advocacy, and trauma counselling. During the month of September, FYF’s staff and volunteers were busy building the women’s center in Khanke camp. Women and men joined forces in building the center, which comprised of several pre-fab units that will accommodate scores of Yezidi women who have enrolled in the training courses.
The center officially opened on Sunday, October 9, 2016. The opening was celebrated by the camp inhabitants -- especially women who have been counting the days to participate in the vital services the center provides. FYF’s staff, elated by having made such important resources available for survivors of Yezidi genocide and brutality, are now busy enrolling Yezidi women in groups of 25 for vocational training...

Millions more children to be protected from five diseases thanks to new vaccine supply agreement
5-in-1 pentavalent vaccine will come from a broad base of manufacturers at half the 2016 average price for the next three years.
Geneva, 19 October 2016 – Gavi, the Vaccine Alliance, welcomes the results of the UNICEF pentavalent vaccine tender that will secure sufficient supplies for the next three years to protect millions of children in Gavi-supported and transitioning countries. Moreover, pentavalent vaccine
a cornerstone of routine immunisation programmes – will be accessible from a broad base of manufacturers at less than US$1: half this year’s average price...

Since Gavi’s inception close to 300 million children have been reached with the vaccine and all 73 countries supported by the Alliance had introduced pentavalent vaccine by the end of 2014.

“Preventing illness through immunisation can have a huge impact on the social and economic well-being of individuals, families, communities and countries,” added Dr Berkley. “The vaccine industry is a vital partner in ensuring that sufficient quantities of quality vaccines are available at affordable prices so that countries and donors implement sustainable immunisation programmes, increase coverage and promote equitable access to vaccines.”...

**Stepping back: Understanding cities and their systems**
14 October 2016 : 76 pages

*Abstract*

As part of our ongoing research into humanitarian response in urban environments, ALNAP’s latest working paper: ‘Stepping Back: Understanding Cities and their Systems’ explores the nature of urban contexts, and the potential of systems thinking as a way to improve our understanding of urban spaces. It argues the importance of stepping back as a first step towards changing policy and practice.

The world we live in is increasingly urbanized; 54% of the world’s population now lives in an urban environment. Having developed to respond to crises in rural settings and refugee camps, the humanitarian sector today is unequipped to deal with the realities of urban contexts. Despite organisations adapting their approaches, and developing tools and pilots, fundamental gaps remain.

This paper looks at the different systems and stakeholders in which exist in urban areas, and outlines what is important for humanitarians to know when responding in complex urban environment.

India’s States Increase Health Spending, But Will They Spend Effectively?
Anit Mukherjee, Amanda Glassman and Rifaiyat Mahbub

Since 2015, India has devolved an increasing share of its national tax yield to state governments and undertaken reforms to other kinds of centre-to-state grants. For many, the increased revenue via the tax devolution was considered good news but some health experts worried that states would give little priority to health under these conditions of greater autonomy. We find that at least two states, Bihar and Uttar Pradesh, have much more to spend in general and are budgeting more for health in 2015-2016 as compared to previous fiscal years.

Using Financial Incentives to Increase the Number of Women in UN Peacekeeping
10/17/16
Charles Kenny

At present rates of progress, it will take more than three centuries for the UN to see the same number of women as men in peacekeeping operations, even though evidence suggests that increasing the proportion of women in operations will improve the success rate of peacekeeping missions and reduce levels of sexual misconduct. One method to speed up the march to equality could be financial incentives directed at troop contributing countries. These could significantly increase the proportion of women peacekeepers, potentially for as little as $77 million per year.

Responding to AIIB: U.S. Leadership at the Multilateral Development Banks in a New Era
10/17/16
Scott Morris

In the face of growing U.S. indifference to multilateral development institutions, China is stepping up. The circumstances around the creation of the Asian Infrastructure Investment Bank (AIIB) have usefully brought to light a longer trend that will ultimately lead to a diminution of U.S. leadership in the multilateral development system.

Philanthropic Community Applauds Montreal Protocol Amendment to Phase Out Potent Greenhouse Gas, Prepares to Distribute $53 Million for Energy Efficiency in Cooling
Kigali, Rwanda—Philanthropic fund of $53 million will help fast-start developing countries expand energy efficiency while phasing out hydrofluorocarbons (HFCs) used as coolants, doubling the climate benefit. A group of philanthropic donors applauds an historic amendment to the Montreal Protocol, under which the nations of the world agreed to phase out hydrofluorocarbons, a climate-harming greenhouse gas. Donor nations established a $27 million fund to provide financial assistance for developing nations on an ambitious phase out timeline, and the philanthropies dedicated an additional $53 million for related efforts to improve energy efficiency in those countries. The philanthropic fund will make combined energy efficient and climate-friendly cooling and air conditioning more affordable for developing nations while doubling the climate benefits.
“This is a historic moment in the fight to mitigate global warming, as well as a unique opportunity to improve quality of life in developing nations,” said Larry Kramer, president of the William and Flora Hewlett Foundation, which supported the philanthropic fund. “It’s also a unique moment for philanthropy. The $53 million fund for energy efficiency in cooling is the largest fund of its kind ever created. All 19 contributors to the fund saw how pairing efficiency with HFC reductions is a winning investment—producing enormous economic benefits for developing nations while improving human safety and comfort and generating huge climate benefits. It’s a rare win-win-win situation.”

October 19, 2016
Genetic differences in microbial species
Moore Foundation grantee Katherine Pollard of the J. David Gladstone Institutes and University of California, San Francisco, has developed a new tool to examine genetic differences within bacterial species to study genetic differences in bacteria between mothers and infants. Direct microbial sequencing of environmental samples, such as from ocean water, hospital surfaces and the human gut have illuminated the vast number of microbes present in our world. What’s more, microbial species can be genetically diverse: within a given bacterial species, gene content can vary by 50 percent or more.
To understand the genetic differences in the microbes present on mothers and infants, Pollard and her colleagues developed a tool, called MIDAS, for rapidly profiling differences in gene content and single nucleotide variants across bacterial strains...

**Child Care Poll: Gap Between Parent And Expert Views Of Quality**

Boston—A new NPR/Robert Wood Johnson Foundation/Harvard T.H. Chan School of Public Health poll suggests a major gap between parents’ views and research experts’ assessments of the quality of child care in the United States. Most parents (59%) believe their child receives “excellent” quality child care. By contrast, the most recent major study on the state of U.S. child care suggests a majority of child care is not high quality.

NPR, RWJF, and the Harvard Chan School polled 1,120 parents or guardians of children 5-years old or younger who were not yet in kindergarten and received regularly scheduled care at least once a week from someone other than a parent, and found that about three in five parents (59%) rate the quality of care their child receives as “excellent”. However, findings from the National Institute of Child Health and Human Development Study of Early Child Care and Youth Development indicate that a majority of child care in the United States is of “fair” quality.

“This poll gives voice to the challenges that many parents face in finding high quality and affordable care for their children,” says Gillian SteelFisher, deputy director of the Harvard Opinion Research Program at Harvard Chan School, who directed the poll...

Press Release - Multistakeholder partnerships for the SDGs in Zambia
SDG Philanthropy Platform Press Release
Lusaka, Zambia, 20 October 2016 – Today marks the launch of the SDG Philanthropy Platform in Zambia - the fifth focus country and the third in Africa, after Kenya and Ghana. The Platform, with generous support from the Conrad N. Hilton, Ford, The MasterCard Foundation and many others, is engaging philanthropic organizations in countries around the world to contribute actively to achieving the 17 Sustainable Development Goals, or Agenda 2030. In Zambia the main focus will be on the well-being of children, which supports the UN and governments’ commitments to ‘leave no one behind’. The Platform will use a multi-sectoral approach to address and work with disadvantaged communities in a holistic way, focusing on issues such as early childhood development, education and health, and sustainable livelihoods for families.
Participants from the government, UN agencies, faith-based organizations, and local, global, and corporate foundations are joining a workshop to forge new partnerships and leverage resources for common objectives, specifically the Sustainable Development Goals (SDGs)...

**Wellcome Open Research is open for submissions**

You can now submit to Wellcome Open Research, our new publishing platform. The platform, which we announced in July, aims to make research outputs available faster, and to support reproducibility and transparency.

Wellcome researchers can use the platform to publish a wide range of submissions, from more traditional narrative-based articles to incremental findings, methods, protocols, datasets and negative/null results...

Seeking consent for research with indigenous communities: a systematic review
Emily F. M. Fitzpatrick, Alexandra L. C. Martiniuk, Heather D'Antoine, June Oscar, Maureen Carter and Elizabeth J. Elliott
BMC Medical Ethics 2016 17:65
Published on: 22 October 2016
Abstract
Background
When conducting research with Indigenous populations consent should be sought from both individual participants and the local community. We aimed to search and summarise the literature about methods for seeking consent for research with Indigenous populations.
Methods
A systematic literature search was conducted for articles that describe or evaluate the process of seeking informed consent for research with Indigenous participants. Guidelines for ethical research and for seeking consent with Indigenous people are also included in our review.
Results
Of 1447 articles found 1391 were excluded (duplicates, irrelevant, not in English); 56 were relevant and included. Articles were categorised into original research that evaluated the consent process (n = 5) or publications detailing the process of seeking consent (n = 13) and...
guidelines for ethical research (n = 38). Guidelines were categorised into international (n = 8); national (n = 20) and state/regional/local guidelines (n = 10). In five studies based in Australia, Canada and The United States of America the consent process with Indigenous people was objectively evaluated. In 13 other studies interpreters, voice recording, videos, pictures, flipcharts and “plain language” forms were used to assist in seeking consent but these processes were not evaluated. Some Indigenous organisations provide examples of community-designed resources for seeking consent and describe methods of community engagement, but none are evaluated. International, national and local ethical guidelines stress the importance of upholding Indigenous values but fail to specify methods for engaging communities or obtaining individual consent. In the ‘Grey literature’ concerns about the consent process are identified but no solutions are offered.

Conclusion
Consultation with Indigenous communities is needed to determine how consent should be sought from the community and the individual, and how to evaluate this process.

Research article
National ethics guidance in Sub-Saharan Africa on the collection and use of human biological specimens: a systematic review
Francis Barchi and Madison T. Little
BMC Medical Ethics 2016 17:64
Published on: 22 October 2016

Abstract
Background
Ethical and regulatory guidance on the collection and use of human biospecimens (HBS) for research forms an essential component of national health systems in Sub-Saharan Africa (SSA), where rapid advances in genetic- and genomic-based technologies are fueling clinical trials involving HBS and the establishment of large-scale biobanks.

Methods
An extensive multi-level search for publicly available ethics regulatory guidance was conducted for each SSA country. A second review documented active trials listed in the WHO International Clinical Trials Registry Platform as of January 2015 in which HBS collection was specified in the protocol. Findings were combined to determine the extent to which countries that are study sites for HBS-related research are supported by regulatory guidance language on the collection, use, ownership and storage of biospecimens.

Results
Of the 49 SSA countries, 29 had some form of national ethics guidance, yet only 17 provided language relating to HBS-related research, with specific guidance on consent (14), ownership (6), reuse (10), storage (9), and export/import/transfer (13). Ten countries accounted for 84% of the active clinical trials involving the collection of HBS in SSA. All except one of these countries were found to have some national guidance in the form of regulations, codes of ethics, and/or standard operating procedures; however, only seven of the ten offered any language specific to HBS.

Conclusions
Despite the fact that the bulk of registered clinical trials in SSA involving HBS, as well as existing and proposed sites for biorepositories under the H3Africa Initiative, are currently situated in countries with the most complete ethics and regulatory guidance, variability in the regulations themselves may create challenges for planned and future pan-African collaborations and may require legislative action at the national level to revise. Countries in SSA that still lack regulatory
guidance on HBS will require extensive health system strengthening in ethics governance before they can be full participants in the modern research enterprise.

Research article

**Research in disaster settings: a systematic qualitative review of ethical guidelines**

Signe Mezinska, Péter Kakuk, Goran Mijaljica, Marcin Waligóra and Dónal P. O’Mathúna

BMC Medical Ethics 2016 17:62

Published on: 21 October 2016

**Abstract**

Background

Conducting research during or in the aftermath of disasters poses many specific practical and ethical challenges. This is particularly the case with research involving human subjects. The extraordinary circumstances of research conducted in disaster settings require appropriate regulations to ensure the protection of human participants. The goal of this study is to systematically and qualitatively review the existing ethical guidelines for disaster research by using the constant comparative method (CCM).

Methods

We performed a systematic qualitative review of disaster research ethics guidelines to collect and compare existing regulations. Guidelines were identified by a three-tiered search strategy: 1) searching databases (PubMed and Google Scholar), 2) an Internet search (Google), and 3) a search of the references in the included documents from the first two searches. We used the constant comparative method (CCM) for analysis of included guidelines.

Results

Fourteen full text guidelines were included for analysis. The included guidelines covered the period 2000-2014. Qualitative analysis of the included guidelines revealed two core themes: vulnerability and research ethics committee review. Within each of the two core themes, various categories and subcategories were identified.

Conclusions

Some concepts and terms identified in analyzed guidelines are used in an inconsistent manner and applied in different contexts. Conceptual clarity is needed in this area as well as empirical evidence to support the statements and requirements included in analyzed guidelines.

Debate

**An analysis of common ethical justifications for compassionate use programs for experimental drugs**

Kasper Raus

BMC Medical Ethics 2016 17:60

Published on: 18 October 2016

**Abstract**

Background

When a new intervention or drug is developed, this has to pass through various phases of clinical testing before it achieves market approval, which can take many years. This raises an issue for drugs which could benefit terminally ill patients. These patients might set their hopes on the experimental drug but are unable to wait since they are likely to pass away before the drug is available. As a means of nevertheless getting access to experimental drug, many seriously ill and terminally ill patients are therefore very willing to participate in randomised controlled trials. However, only very few terminally ill patients are able to actually participate, and those that do participate are at risk of participating solely as a way of getting experimental drugs. Currently, there are, however, ways of getting access to drugs that have not (yet)
gained market approval. One such mean is via expanded access or compassionate use programs where terminally ill patients receive experimental new drugs that are not yet market approved. In this paper, I examine some of the common justifications for such programs.

Main body
The most frequently voiced justifications for compassionate use or expanded access programs could be put in one of three categories. First, there are justifications of justice, where compassionate use programs could be seen as a just or fair way to distribute experimental new drugs to patients who are denied access to RCT’s through no fault of their own. Second, such programs could be justified by reference to the ethical principle of beneficence where it could be claimed that terminally ill patients stand to benefit greatly at very little risk (as they are already dying). Third, there are considerations of autonomy where, it is claimed, patients should be able to exercise their autonomy and have access to such drugs if that is there free choice and they are fully aware of the risks associated with that choice.

Short conclusion
In this paper, I argue currently all justifications are potentially problematic. If they truly form the basis for justification, compassionate use programs should be designed to maximize justice, beneficence and autonomy.

Questioning assent: how are children's views included as families make decisions about clinical trials? (pages 900–908)
L. Madden, V. Shilling, K. Woolfall, E. Sowden, R. L. Smyth, P. R. Williamson and B. Young
Version of Record online: 2 MAY 2016 | DOI: 10.1111/cch.12347

Abstract

Background

Assent is used to take children's wishes into account when they are invited into clinical trials, but the concept has attracted considerable criticism. We investigated children's accounts of decision-making with the aim of informing practice in supporting children when invited to join a clinical trial.

Methods

We audio-recorded qualitative, semi-structured interviews with 22 children aged 8–16 years about being invited to take part in a clinical trial. Most children were interviewed with their parents. Analysis of the transcribed interviews examined the content of participants' accounts thematically, whilst also drawing on principles of discourse analysis, which examines how individuals use talk to achieve certain effects or social practices.

Results

It was not possible to separate children's knowledge of the clinical trial, or their decision-making processes from that of their parents, with parents taking a substantial mediating role in producing their children's decisions. Decision-making gradually unfolded across time and events and was interwoven within the family context, rather than happening in one moment or in the clinical setting. Whilst children valued their parents' role, a case study of child–parent disagreement indicated how children can struggle to be heard.

Conclusions

Decisions happen within a process of family dynamics, in contrast to ideas of assent that isolate it from this context. Parents have a substantial role in children's decisions, and thus how families come to provide consent. Reflecting this we argue that assent practices need to focus on supporting parents to support their children in learning and deliberating about trials. However, this needs to be accompanied by practitioners being alert to the possibility of divergence in child and parent views and enabling children's perspectives to be heard.

The impacts of the food, fuel and financial crises on poor and vulnerable households in Nigeria: A retrospective approach to research inquiry (pages 763–788)
Blessing M. Chiripanhura and Miguel Niño-Zarazúa
Version of Record online: 12 OCT 2016 | DOI: 10.1111/dpr.12183
Abstract
This article examines the impacts of the financial, food and fuel crises on poor and vulnerable households in two states of Nigeria: Lagos and Kano. It uses retrospective household-level data to analyze the impacts of induced price variability on household welfare. The results indicate that aggregate shocks have significant adverse effects on household consumption, schooling and child labour decisions, with a degree of impact heterogeneity across regions and rural and urban areas of the country. We find that the coping strategies adopted by the poor to deal with the short-term effects of the crises can lock households in a low-income equilibrium or poverty trap. Provided that covariate shocks exacerbate these effects, they become central for policy design.

The Social Construction of Development Cooperation Success and Failure
Adam Moe Fejerskov
Pages 365-383

Abstract
Determining the success of development projects and programmes is often portrayed and understood as a question of measurable impact and effectiveness. More often than not however, success is a negotiated truth, socially constructed between the involved stakeholders that does not require measurable results of impact, and may very well hold the opposite circumstances. By examining the Intergovernmental Authority on Development in the Horn of Africa, the article investigates one such case of development project success despite substantial impact on the ground. Success in development cooperation, the article argues, is not a matter of attaining impact, but is rather constructed in the overlapping space between representation and interpretation of events, actions and discourses, made and sustained socially between recipient and donor.

Abstract

Background

Conducting research during or in the aftermath of disasters poses many specific practical and ethical challenges. This is particularly the case with research involving human subjects. The extraordinary circumstances of research conducted in disaster settings require appropriate regulations to ensure the protection of human participants. The goal of this study is to systematically and qualitatively review the existing ethical guidelines for disaster research by using the constant comparative method (CCM).

Methods

We performed a systematic qualitative review of disaster research ethics guidelines to collect and compare existing regulations. Guidelines were identified by a three-tiered search strategy: 1) searching databases (PubMed and Google Scholar), 2) an Internet search (Google), and 3) a search of the references in the included documents from the first two searches. We used the constant comparative method (CCM) for analysis of included guidelines.

Results

Fourteen full text guidelines were included for analysis. The included guidelines covered the period 2000-2014. Qualitative analysis of the included guidelines revealed two core themes: vulnerability and research ethics committee review. Within each of the two core themes, various categories and subcategories were identified.

Conclusions

Some concepts and terms identified in analyzed guidelines are used in an inconsistent manner and applied in different contexts. Conceptual clarity is needed in this area as well as empirical evidence to support the statements and requirements included in analyzed guidelines.

An increasing number of international emergency medical teams are deployed to assist disaster-affected populations worldwide. Since Haiti earthquake those teams have been criticised for ill adapted care, lack of preparedness in addition to not coordinating with the affected country healthcare system. The Emergency Medical Teams (EMTs) initiative, as part of the World Health Organization’s Global Health Emergency Workforce program, aims to address these shortcomings by improved EMT coordination, and mechanisms to ensure quality and accountability of national and international EMTs. An essential component to reach this goal is appropriate education and training. Multiple disaster education and training programs are available. However, most are centred on individuals’ professional development rather than on the EMTs operational performance. Moreover, no common overarching or standardised training frameworks exist. In this report, an expert panel review and discuss the current approaches to disaster education and training and propose a three-step operational learning framework that could be used for EMTs globally. The proposed framework includes the following steps: 1) ensure professional competence and license to practice, 2) support adaptation of technical and non-technical professional capacities into the low-resource and emergency context and 3) prepare for an effective team performance in the field. A combination of training methodologies is also recommended, including individual theory based education, immersive simulations and team training. Agreed curriculum and open access training materials for EMTs need to be further developed, ideally through collaborative efforts between WHO, operational EMT organizations, universities, professional bodies and training agencies.

Laboratory Diagnosis for Outbreak-Prone Infectious Diseases after Typhoon Yolanda (Haiyan), Philippines
October 21, 2016 · Research Article
Introduction: Typhoon Yolanda (Haiyan) hit the central part of the Philippines on November 8, 2013. To identify possible outbreaks of communicable diseases after the typhoon, nasopharyngeal swabs, stool and blood samples were collected from patients who visited the Eastern Visayas Regional Medical Center due to acute respiratory infection (ARI), acute gastroenteritis (AGE) or other febrile illness (OFI) including suspected dengue fever, between November 28, 2013 and February 5, 2014.
Methods: Samples were tested on-site for selected pathogens using rapid diagnostic tests. Confirmation and further analysis were conducted at the Research Institute for Tropical Medicine (RITM) in Manila using polymerase chain reaction (PCR) and sequencing. Residues of the rapid diagnostic tests and samples collected in the filter papers (FTATM card) were transported to Manila under suboptimal conditions. PCR results were compared between the kit residues and the filter papers.
Results: A total of 185 samples were collected. Of these, 128 cases were ARI, 17 cases were AGE and 40 cases were OFI. For nasopharyngeal swab samples, detection rates for enterovirus and rhinovirus residues were higher than the filter papers. For stool samples, rotavirus positive rate for the filter paper was higher than the kit residues. We also managed to obtain the sequence data from some of the kit residues and filter papers. Discussion: Our results confirmed the importance of PCR for the laboratory diagnosis of infectious diseases in post-disaster situations when diagnostic options are limited.

PNAS 2016; published ahead of print October 17, 2016, doi:10.1073/pnas.1607542113

**Significance**
Understanding the conflict potential of drought is critical for dealing effectively with the societal implications of climate change. Using new georeferenced ethnicity and conflict data for Asia and...
Africa since 1989, we present an actor-oriented analysis of growing-season drought and conflict involvement among ethnic groups. Results from naive models common in previous research suggest that drought generally has little impact. However, context-sensitive models accounting for the groups’ level of vulnerability reveal that drought can contribute to sustaining conflict, especially for agriculturally dependent groups and politically excluded groups in very poor countries. These results suggest a reciprocal nature–society interaction in which violent conflict and environmental shock constitute a vicious circle, each phenomenon increasing the group’s vulnerability to the other.

Abstract
To date, the research community has failed to reach a consensus on the nature and significance of the relationship between climate variability and armed conflict. We argue that progress has been hampered by insufficient attention paid to the context in which droughts and other climatic extremes may increase the risk of violent mobilization. Addressing this shortcoming, this study presents an actor-oriented analysis of the drought–conflict relationship, focusing specifically on politically relevant ethnic groups and their sensitivity to growing-season drought under various political and socioeconomic contexts. To this end, we draw on new conflict event data that cover Asia and Africa, 1989–2014, updated spatial ethnic settlement data, and remote sensing data on agricultural land use. Our procedure allows quantifying, for each ethnic group, drought conditions during the growing season of the locally dominant crop. A comprehensive set of multilevel mixed effects models that account for the groups’ livelihood, economic, and political vulnerabilities reveals that a drought under most conditions has little effect on the short-term risk that a group challenges the state by military means. However, for agriculturally dependent groups as well as politically excluded groups in very poor countries, a local drought is found to increase the likelihood of sustained violence. We interpret this as evidence of the reciprocal relationship between drought and conflict, whereby each phenomenon makes a group more vulnerable to the other.

Climate risk analysis must play a fundamental role

**Summary**
Currently planned greenhouse gas mitigation efforts would not prevent climate warming from going beyond 2ºC as aspired to in the 2015 Paris Agreement (1), adding to climate-related impacts already under way (2). Although climate adaptation has been strengthened in the Paris Agreement, climate-related risks may exceed adaptation possibilities of communities and countries. To this effect, an important decision in the Paris Agreement was the endorsement of the Warsaw International Mechanism (WIM) for Loss and Damage (L&D) (3). This established L&D as a distinct pillar of climate negotiations, yet with an unclearly defined remit. With a policy framework yet to emerge, the 22nd Conference of the Parties of the United Nations Framework Convention on Climate Change (UNFCC) in November in Marrakesh will review the structure, mandate, and effectiveness of the WIM, first institutionalized in 2013. Risk science can provide a rationale and delineate a policy space for L&D, composed of curative measures for unavoidable and unavoidable impacts, and transformative measures for avoiding and managing increasingly intolerable risks.
