## **The Sentinel**

**Human Rights Action :: Humanitarian Response :: Health :: Education ::  
Heritage Stewardship :: Sustainable Development**

---

**Period ending 7 September 2019**

*This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.*

*The Sentinel is a service of the [GE2P2 Global Foundation](#), which is solely responsible for its content. Comments and suggestions should be directed to:*

*David R. Curry  
Editor, The Sentinel  
President, GE2P2 Global Foundation  
[david.r.curry@ge2p2center.net](mailto:david.r.curry@ge2p2center.net)*

***The Sentinel is also available as a pdf document***

:: [Week in Review](#)

:: [Key Agency/IGO/Governments Watch](#) - Selected Updates from 30+ entities

:: [INGO/Consortia/Joint Initiatives Watch](#) - Media Releases, Major Initiatives, Research

:: [Foundation/Major Donor Watch](#) - Selected Updates

:: [Journal Watch](#) - Key articles and abstracts from 100+ peer-reviewed journals

## **:: Week in Review**

*A highly selective capture of strategic developments, research, commentary, analysis and announcements spanning Human Rights Action, Humanitarian Response, Health, Education, Holistic Development, Heritage Stewardship, Sustainable Resilience. Achieving a balance across these broad themes is a challenge and we appreciate your observations and ideas in this regard. This is not intended to be a "news and events" digest.*

## **Global Digital Economy**

### **[Global efforts needed to spread digital economy benefits, UN report says](#)**

UNCTAD/PRESS/PR/2019/023

Geneva, Switzerland, (04 September 2019)

*:: Digital wealth is concentrated in the hands of a few US- and China-based platforms*

*:: The gap between the under-connected and the hyper-digitalized countries will widen and worsen inequalities if unaddressed*

Concerted global efforts are required to spread the rapidly expanding digital economy's gains to the many people who currently reap little benefit from it, says a new United Nations report.

The UN Conference on Trade and Development (UNCTAD) has released its first-ever **Digital Economy Report 2019** that maps the flow, data and funds in the world's digital economy. It outlines the enormous potential gains and possible development costs as more of the world moves, connects and buys online.

**Wealth creation in the digital economy is highly concentrated in the United States and China, with the rest of the world, especially countries in Africa and Latin America, trailing considerably far behind, according to the report.**

The United States and China account for 75% of all patents related to blockchain technologies, 50% of global spending on the Internet of Things (IoT), more than 75% of the cloud computing market and as much as 90% per cent of the market capitalization value of the world's 70 largest digital platform companies (figure 1).

Under current policies and regulations, this trajectory is likely to continue, further contributing to rising inequality, warned UN Secretary-General, António Guterres.

"We must work to close the digital divide, where more than half the world has limited or no access to the Internet. Inclusivity is essential to building a digital economy that delivers for all," Mr. Guterres said in the report..

### *Burgeoning data flows*

**Global internet protocol (IP) traffic, a proxy for data flows, has seen dramatic growth. In 1992, there was about 100 gigabytes (GB) of traffic per day. By 2017 such traffic had surged to more than 45,000 GB per second (figure 2).**

Yet the world is only in the early days of the data-driven economy. By 2022 global IP traffic is projected to reach 150,700 GB per second.

The surge in data traffic reflects growth in the sheer number of people using the Internet and the uptake of frontier technologies such as blockchain, data analytics, artificial intelligence, 3D printing, IoT, automation, robotics and cloud computing.

An entirely new "data value chain" has evolved, comprising firms that support data collection, the production of insights from data, data storage, analysis and modelling, the report observes.

#### *Platforms have an edge*

...The report notes that 40% of the world's 20 largest companies by market capitalization have a platform-based business model.

**Seven "super platforms" – Microsoft, followed by Apple, Amazon, Google, Facebook, Tencent and Alibaba – account for two thirds of the total market value of the top 70 platforms.**

**The combined value of the platform companies with a market capitalization of more than US\$100 million was estimated at more than \$7 trillion in 2017 – 67% higher than in 2015, according to the report...**

#### *Developing countries risk remaining providers of raw data*

The dominance of global digital platforms, their control of data, as well as their capacity to create and capture the ensuing value, accentuates concentration and consolidation rather than reducing inequalities between and within countries, the report notes.

**It warns that developing countries risk becoming mere providers of raw data, while having to pay for the digital intelligence generated using their data.**

If left unaddressed, the yawning gap between the under-connected and the hyper-digitalized countries will widen, and inequalities be exacerbated.

Breaking this vicious circle requires out-of-the-box thinking, the report says. One way is to consider finding an alternative configuration of the digital economy that leads to more balanced results and a fairer distribution of the gains from data and digital intelligence....

.....

## **Myanmar**

### **[Joint Letter to UN Secretary-General on Rosenthal Report](#)**

September 5, 2019

Dear Secretary-General,

**We, the undersigned coalition of 16 international organizations, write to you regarding the recent report by Gert Rosenthal, "A Brief and Independent Inquiry into the Involvement of the United Nations in Myanmar from 2010 to 2018."**<sup>[1]</sup> As you are aware, 19 international

nongovernmental organizations wrote to you on March 25, 2019, expressing support for an independent investigation into the handling of the Myanmar crisis by the UN and its agencies, with a view to drawing lessons and ensuring accountability.<sup>[2]</sup>

**The Rosenthal report describes the UN's failure to stop, mitigate, or even draw attention to violence that the UN Independent International Fact-Finding Mission found amounted to crimes under international law including crimes against humanity,** and warrants an investigation of the crime of genocide against Rohingya.<sup>[3]</sup> We note that the mandated scope of Mr. Rosenthal's inquiry was extremely limited, was undertaken by one individual, did not include field visits, and excluded individual accountability.<sup>[4]</sup> These limitations do not satisfy the UN Human Rights Council's call for a "comprehensive" investigation,<sup>[5]</sup> and are not reconcilable with the extraordinary magnitude of the crisis and the urgency of gathering "lessons learned" to improve the UN's response in Myanmar and in similar high-risk situations going forward.

Nevertheless, we recognize your leadership in commissioning this report, releasing it publicly, and accepting all of its recommendations. This is a valuable first step. We stand ready to work with your office, as appropriate, to implement the recommendations, and to support other necessary changes and reforms.

However, we also note that the UN made similar commitments after the publication of the 2012 "Report of the Secretary-General's Internal Review Panel on United Nations Action in Sri Lanka," written by Charles Petrie.<sup>[6]</sup> It is clear from the Rosenthal report that the failure to fully implement the recommendations in the Petrie report set the stage for the UN's subsequent failings in Myanmar.

**It is for this reason that we encourage you to take bold action, beyond the recommendations outlined in the Rosenthal report.** These actions should include:

- :: promptly implementing reforms to prevent the recurrence of the "systematic" failures and "obvious dysfunctional performance" outlined in the report, and ensuring accountability for those failures as required;
- :: re-energizing the Human Rights up Front initiative prompted by the Petrie report;
- :: returning to your office a senior staff member dedicated to ensuring Human Rights up Front is fully implemented throughout the UN system;
- :: taking practical steps to hold accountable those UN officials responsible for failures before, during, and since the 2017 ethnic cleansing campaign;
- :: supporting the Resident Coordinator to ensure they have authority to implement a comprehensive Human Rights up Front strategy that takes into account the views of national and international NGOs, community-based organizations, and the human rights community, and is reflected and implemented at country level;
- :: using your leadership to take concrete steps to improve coordination at all levels of the UN on the situation in Myanmar; and
- :: committing to publishing annual updates on progress in adopting the recommendations of the Petrie and Rosenthal reports until they are fully implemented.

**To promote greater transparency and accountability, we urge you to submit the report to the Security Council and encourage its member states to invite Mr. Rosenthal to brief the Council, the UN General Assembly, and nongovernmental organizations on this matter.** We also urge you to brief the UN Human Rights Council on the report's findings and recommendations at its 43rd session, as requested by the Council in resolution 40/29.<sup>[7]</sup>

We note that while Mr. Rosenthal’s review covers 2010 to 2018, many of the issues raised regarding the failings of “quiet diplomacy” are ongoing. A number of actors were also responsible for failing to take steps that may have prevented or limited atrocities, including individual UN member states and, above all, the Security Council, which has abdicated its collective responsibility to act under the UN Charter, despite your September 2, 2017 letter to the Security Council President urging concrete action.[\[8\]](#)

It is vital that your office act once again and quickly. Specifically, we call on you to set a clear, unifying strategy for the UN Country Team in Myanmar that places human rights concerns at the center of its strategy.

With elections scheduled in Myanmar in 2020, there is a real and serious risk of more violence against the Rohingya, other Muslim communities, and other vulnerable groups; heightened repression against critics of the military and government; and increased violations of international humanitarian law in the country’s internal armed conflicts with ethnic armed groups. Against this backdrop, it is crucial that under your direction UN bodies operate with a consistent and principled voice that prioritizes human rights.

We would be happy to discuss these issues and next steps with you and your team. As Mr. Rosenthal states, UN reforms “will be on trial” in Myanmar going forward.

We hope that you can make past failures in Myanmar a turning point in the UN’s history—the moment when the lessons were finally learned.

Yours sincerely,

**Health – Epidemic Response**

## **Africa Public Health Foundation to Address Epidemic Preparedness and Response**

- *An acute public health event in Africa is reported every four days and the costs of infectious disease crises are rising*
- *The new Africa Public Health Foundation will support the Africa Centres for Disease Control and Prevention*
- *New foundation will facilitate public-private cooperation on strengthening health security across the continent*

Cape Town, South Africa, 5 September 2019 – The Africa Centres for Disease Control and Prevention ([Africa CDC](#)), in partnership with the African Union and World Economic Forum, today announces the establishment of the Africa Public Health Foundation (APHF). The foundation will facilitate public-private cooperation on supporting Africa CDC’s mission to strengthen health and economic security.

Disease outbreaks are serious health security threats and are increasingly an impediment to economic growth in Africa. The cost, for example, of the 2014-2015 Ebola outbreak to three affected west African countries is estimated to be \$53 billion. Overall, the annual global cost of moderately severe to severe pandemics is roughly \$570 billion, or 0.7% of global income – a cost in the same order of magnitude as climate change.

“We are in a new era of epidemic risk. Mitigating risk and impact of epidemics on lives and livelihoods requires an all-hands-on-deck approach, engaging all sectors,” said Ryan Morhard, Lead, Global Health Security at the World Economic Forum.

The APHF will align itself with the mission and vision of the Africa CDC to support member states build their capacity to better detect and respond to diseases outbreaks and emergencies. It will advance public-private cooperation to strengthen health systems, develop the healthcare workforce, support innovations for public health, and advocate for robust policies, regulations and partnerships for resource mobilization.

The creation of the APHF further delivers on the declaration made by the Heads of States and Governments (HoSG) of African countries in July 2017, tasking Africa CDC, the African Union Commission (AUC) and the World Health Organization (WHO) with accelerating the implementation of the International Health Regulations (IHR). The regulations were established to support member states strengthen their health systems to better prepare and respond to emergencies and disease threats.

Bernard Haufiku, Minister of Health of Namibia (2015-2018) and Adviser to the President of Namibia, will be taking on the role of Founder of APHF...

## **Nutrition**

### **Essential Nutrition Actions: mainstreaming nutrition throughout the life course**

*Research*

World Health Organization

2019 :: 191 pages

PDF: <https://apps.who.int/iris/bitstream/handle/10665/326261/9789241515856-eng.pdf?ua=1>

## Overview

Primary health care is the foundation of universal health coverage; it is a whole-of-society approach to health and well-being, centred on the needs and preferences of individuals, families and communities. Nutrition is a foundation for health and well-being for all, leaving no one behind, and a critical component of primary health care, through its promotion and prevention, addressing its determinants, and a people-centred approach.

Healthier populations are achieved through multisectoral actions that are not limited to health systems alone, though often using the stewardship, advocacy and regulatory functions of health ministries. Optimal nutrition for individual health and development bridges interventions by health systems to improve the health of populations.

Interventions addressing health through the life-course (covering women, men, infants, children, adolescents and older persons) contribute to the delivery of integrated primary health care. A life-course approach is critical to operationalize the worldwide commitment to people-centred primary health care.

**This publication's primary purpose is to provide a compilation of actions to address malnutrition in all its forms**, in a concise and user-friendly format to help in decision-making processes for integration of nutrition interventions in national health policies, strategies, and plans based on country-specific needs and global priorities.

## Governance – Ageism

### [IMF Executive Board: Governors Remove Age Limit for the Position of Managing Director](#)

September 5, 2019

The Executive Board of the International Monetary Fund (IMF) made the following statement today:

“The Board of Governors has approved the proposal by the Executive Board to remove the age limit for the position of IMF Managing Director. Approval of the proposal required a simple majority of the votes cast, with a minimum participation requirement of a majority of Governors holding two-thirds of the total voting power. Voting ran from August 21 to September 4.

“Since 1951, the IMF’s By-Laws had prohibited the appointment of a candidate aged 65 or over as Managing Director, and had also prohibited the Managing Director from serving past his/her 70th birthday. The amendment to the By-Laws adopted by the Board of Governors, which is effective immediately, brings the Managing Director’s terms of appointment into line with those of members of the IMF Executive Board, which the Managing Director chairs, and those of the President of the World Bank Group, who are not subject to an age limit.

“The IMF Executive Board is engaged in the selection of a successor to outgoing Managing Director Christine Lagarde, who will step down on September 12. Nominations to the position close on September 6, 2019, and we intend to complete the selection process by October 4.”

#### [Widespread male sex bias in mammal fossil and museum collections](#)

Graham Gower, Lindsey E. Fenderson, Alexander T. Salis, Kristofer M. Helgen, Ayla L. van Loenen, Holly Heiniger, Emilia Hofman-Kamińska, Rafał Kowalczyk, Kieren J. Mitchell, Bastien Llamas, and Alan Cooper

PNAS first published September 3, 2019. <https://doi.org/10.1073/pnas.1903275116>

#### *Significance*

The extent to which the fossil record provides an accurate picture of past life is an important issue that is often difficult to assess. We genetically sexed 277 mammalian subfossils using high-throughput sequencing of ancient DNA, and found a strong male bias (approx. 75%) in Pleistocene bison (n=186) and brown bears (n=91), matching signals previously reported for mammoth. Similarly, a male bias was also found in species of nearly all mammal orders in 4 large museum collections. For mammals, we suggest both male behavior and appearance can lead to increased chances of representation in fossil and museum collections, and this previously unrecognized sex bias could have substantial implications for views of past population and ecological processes.

#### *Abstract*

A recent study of mammoth subfossil remains has demonstrated the potential of using relatively low-coverage high-throughput DNA sequencing to genetically sex specimens, revealing a strong male-biased sex ratio [P. Pečnerová et al., *Curr. Biol.* 27, 3505–3510.e3 (2017)]. Similar patterns were predicted for steppe bison, based on their analogous female herd-based structure. We genetically sexed subfossil remains of 186 Holarctic bison (*Bison* spp.), and also 91 brown bears (*Ursus arctos*), which are not female herd-based, and found that ~75% of both groups were male, very close to the ratio observed in mammoths (72%). This large deviation from a 1:1 ratio was unexpected, but we found no evidence for sex differences with respect to DNA preservation, sample age, material type, or overall spatial distribution. We further examined ratios of male and female specimens from 4 large museum mammal collections and found a strong male bias, observable in almost all mammalian orders.

**We suggest that, in mammals at least, 1) wider male geographic ranges can lead to considerably increased chances of detection in fossil studies, and 2) sexual dimorphic behavior or appearance can facilitate a considerable sex bias in fossil and modern collections, on a previously unacknowledged scale. This finding has major implications for a wide range of studies of fossil and museum material.**

01 September 2019

UN High Commissioner for Refugees Filippo Grandi today expressed his concern over the publication of a National Register of Citizens (NRC) that may put large numbers of people in India's north-eastern state of Assam at risk of becoming stateless.

It is too early to say what the nationality status of those left off the National Register, some 1.9 million according to the authorities, may ultimately be. UNHCR is concerned, however, that many are at risk of statelessness if they do not possess another nationality.

"Any process that could leave large numbers of people without a nationality would be an enormous blow to global efforts to eradicate statelessness," High Commissioner Grandi said. "I appeal to India to ensure that no one is rendered stateless by this action, including by ensuring adequate access to information, legal aid, and legal recourse in accordance with the highest standards of due process."...

#### **Africa's three richest men have more wealth than the poorest 650 million people across the continent.**

3 September 2019

Three African billionaires today have more wealth than the poorest 50% - or 650 million people across The report, called "[A Tale of Two Continents](#)", is launched as African political and business leaders gather this week for the World Economic Forum Africa Meeting in Cape Town, South Africa. It shows how rising and extreme inequality across Africa is undermining efforts to fight poverty.

A Tale of Two Continents reveals that while the richest Africans fortunes are increasing, extreme poverty is rising in the continent. The report also looks at how unsustainable levels of debt and a rigged international tax system are depriving African governments of billions of dollars in lost revenue each year - money that could otherwise be invested in education, healthcare and social protection...

Current Opinion in Infectious Diseases. 32(5):401-406, October 2019.

*Recent findings* The key changes in the updated WHO 2018 guidelines for rabies prophylaxis include abbreviated vaccination regimens for pre and postexposure prophylaxis. These cost and dose-sparing regimens allow equitable sharing of vaccines, necessitate fewer clinic visits and thus can enhance patient compliance. The recommendations on rabies immunoglobulin administration permit prioritization and optimal use of this life-saving biologic, especially in areas with scarcity. However, there is a need for additional evidence to support the abridgment of some regimens and need for data on the safety and immunogenicity of these regimens in special groups such as infants and the immunocompromised.

#### **[Worldwide Reduction in MERS Cases and Deaths since 2016](#)**

Christl A. Donnelly, Mamun R. Malik, Amgad Elkholy, Simon Cauchemez, and Maria D. Van

*Abstract*

Since 2012, Middle East respiratory syndrome (MERS) coronavirus has infected 2,442 persons worldwide. Case-based data analysis suggests that since 2016, as many as 1,465 cases and 293–520 deaths might have been averted. Efforts to reduce the global MERS threat are working, but countries must maintain vigilance to prevent further infections.

Health Policy and Planning, Volume 34, Issue 6, July 2019, Pages 407–417,

<https://doi.org/10.1093/heapol/czz050>

*Abstract*

... Aggregating these costs, the total global economic losses are estimated to be US\$341.3 billion, or 0.70% of global gross national income. While the aim of the tool is to capture the majority of the costs, the estimates are likely to be conservative since economic costs of increased household caregiving time (mainly borne by women), and treatment costs related to other diseases attributable to not breastfeeding according to recommendations are not included in the analysis. This study illustrates the substantial costs of not breastfeeding, and potential economic benefits that could be generated by government and development partners' investments in scaling up effective breastfeeding promotion and support strategies.

#### ***Special Feature: Making humanitarian action work for women and girls***

by HPN May 2019

The theme of this edition of Humanitarian Exchange, co-edited with Women Deliver, is making humanitarian action work for women and girls. Despite gains, including commitments made at the World Humanitarian Summit, there is still much to be done to address the gendered impacts of humanitarian crises and improve gender-sensitive humanitarian action.

In the lead article, [Jacqueline Paul](#) advocates for feminist humanitarian action based on evidence that improvements in women's socio-economic status can reduce excess mortality among women after shocks. [Jean Kemitare, Juliet Were and Jennate Eoomkham](#) look at the role of local women's rights organisations in preventing and responding to violence against women and girls, and [Marcy Hersh and Diana Abou Abbas](#) highlight opportunities for more concrete action on sexual and reproductive health in emergencies.

Citing experience from Vanuatu, [Jane Newnham](#) explains how women will choose to use contraceptives even during a humanitarian response, when services and counselling are delivered in an appropriate and responsive way. Drawing on experience in Bangladesh, [Tamara Fetters and colleagues](#) challenge the belief that abortion is a non-essential service, or too complicated for humanitarian actors to provide. [Darcy Ataman, Shannon Johnson, Justin Cikuru and Jaime Cundy](#) reflect on an innovative programme using music therapy to help survivors of trauma.

[Emilie Rees Smith, Emma Symonds and Lauryn Oates](#) highlight lessons from the STAGE education programme in Afghanistan, and [Degan Ali and Deqa Saleh](#) outline how African Development Solutions is helping women and girls take on leadership and decision-making roles in Somalia. [Fiona Samuels and](#)

Taveeshi Gupta explore patterns of suicide among young people in Vietnam, with a particular focus on girls, and Subhashni Raj, Brigitte Laboukly and Shantony Moli illustrate the importance of a gendered approach to community-based disaster risk reduction in the South-West Pacific. Nicola Jones, Workneh Yadete and Kate Pincock draw on research in Ethiopia to explore the gender- and age-specific vulnerabilities of adolescents. The edition ends with an article by Julie Rialet-Cislaghi on how humanitarian responses can better address child marriage.

#### **[Ebola in the DRC one year later – Boiling the frog?](#)**

Susan McLellan, Mark G. Kortepeter, Nahid Bhadelia, Erica S. Shenoy, Lauren M. Sauer, Maria G. Frank, Theodore J. Cieslak

p212–213

Published online: July 19, 2019

... In summary, security concerns in DRC provide a significant barrier to outbreak assistance; however, maintaining the current level of international engagement is likely to allow the outbreak to continue to spread within DRC, and eventually to neighboring and in turn distant countries. This will not be the last outbreak of Ebola in the DRC or elsewhere. It is to our benefit to seek ways to demonstrate this is not another case of “helicopter” intervention, but a long-term commitment for humanitarian aid and to bolster the health care system overall in DRC and develop sustainable response strategies that can be deployed to other communicable disease outbreaks in the future.

A deliberate, thoughtful scale-up of involvement in support of and in collaboration with partners on the ground, including the WHO and DRC government would ensure a seamless effort that is responsive to the communities’ and partners’ needs and help tip the scales. Such a demonstration would go a long way in winning the hearts and minds and cooperation of the local population who are there for the long term.

**[Assessing national governance of medicine promotion: an exploratory study in Ghana to trial a structured set of indicators](#)**

Authors: Marcia McLean, Jillian Clare Kohler and Danny Edwards

*Background*

Two billion people worldwide, predominantly in low- and middle-income countries, cannot consistently access required essential medications, thus affecting their ability to attain optimal health outcomes. Access to appropriate medicines may be compromised due to issues involving cost, availability, quality, and prescribing practices, and system-wide factors such as a lack of transparency and accountability. Pharmaceutical promotional practices impact many of these issues, thus influencing the use of appropriate medicines. Good governance is ultimately the responsibility of national governments through strong health systems with transparent and accountable practices that facilitate appropriate medicine use. We designed a structured set of indicators, based on existing tools, to assess the strength of the national governance of pharmaceutical promotion. In this exploratory study, we trialed the indicators in Ghana.

### **What is the prospect of a safe and effective dengue vaccine for travellers?**

Anna P Durbin, MD, Duane J Gubler, ScD

Journal of Travel Medicine, Volume 26, Issue 6, 2019, tay153, <https://doi.org/10.1093/jtm/tay153>

Dengue affects hundreds of millions of persons each year and is a risk for travellers to dengue-endemic regions. The first licensed dengue vaccine is approved for use only in persons who are known to have had previous dengue infection, limiting its potential for use in travellers. Two other dengue vaccines are currently in Phase 3 clinical trials, with preliminary efficacy results expected soon. These vaccines differ from the currently licensed vaccine and, should they demonstrate efficacy, may offer the possibility of a dengue vaccine for travellers.

### **Addressing vaccine hesitancy in travellers: The CARD™ System**

Anna Taddio, PhD, Noni MacDonald, MD

Journal of Travel Medicine, Volume 26, Issue 6, 2019, taz056, <https://doi.org/10.1093/jtm/taz056>

Current vaccination programs do not fully incorporate client-centred care in the delivery of vaccinations; hence, do not address vaccination hesitancy. This article provides a summary of a novel client-centred approach to vaccinations to improve the vaccination experience and promote vaccination.

### **Measles and the 2019 Hajj: the risk of magnifying the global measles surge**

Ziad A Memish, MD, FRCPC, FRCPE, FRCPL, FACP, FFPH, Anas A Khan, MD, Shahul Ebrahim, MD, MSc, PhD

Journal of Travel Medicine, Volume 26, Issue 6, 2019, taz041, <https://doi.org/10.1093/jtm/taz041>

The projected linear increases in Muslim pilgrims for Hajj and Umra to Saudi Arabia from current 7 million to 30 million by 2030 will increase the density of pilgrims and the potential for infectious disease transmission. Because pilgrims originate from over 180 countries, the Hajj and Umrah pilgrimage can

further compound the ongoing measles outbreaks. Vaccine hesitancy among Muslim populations should receive special attention in addition to general measles control efforts.

### **[The rise in travel-associated measles infections—GeoSentinel, 2015–2019](#)**

Journal of Travel Medicine, Volume 26, Issue 6, 2019, taz046, <https://doi.org/10.1093/jtm/taz046>

The global threat of measles in recent years affects international travelers, and is acquired in both endemic and outbreak settings. The number of measles cases reported to GeoSentinel has risen each year since 2015 and demonstrates a high median age, short travel duration, and low measles

### **[Yellow fever and Hajj 2019: from airline introduction of mosquitoes to expanding geography of transmission and vaccination challenges](#)**

[Shahul H Ebrahim, MD](#), [Ziad A Memish, MD](#)

Journal of Travel Medicine, Volume 26, Issue 6, 2019, taz051, <https://doi.org/10.1093/jtm/taz051>

Yellow fever epidemiology is changing with large-scale epidemics in Africa, increased risk of urban outbreaks in Latin America, and spread to Asia. Therefore, in addition to the changing epidemiology, mosquito resurgence, and urbanization of yellow fever, the Hajj 2019 presents another challenge to the well-structured global strategy for YF Control.

### **[Measles and the 2019 Hajj: risk of international transmission](#)**

[Sakshi Shetty](#), [Maya Murmann](#), [Ashleigh R Tuite](#), [Alexander G Watts](#), [Isaac Bogoch](#) ...

Journal of Travel Medicine, Volume 26, Issue 6, 2019, taz058, <https://doi.org/10.1093/jtm/taz058>

The current global increase in measles cases is associated with a small but non-negligible risk of an infected pilgrim arriving at the 2019 Hajj. Since even a single imported case can cause an outbreak in vulnerable populations, Saudi Arabia and countries with returning pilgrims should be alert for measles cases.

*Tuberculosis 2019*

**[Insights and challenges in tuberculosis vaccine development](#)**

Helen McShane

*Summary*

Tuberculosis kills more people than any other pathogen and the need for a universally effective vaccine has never been greater. An effective vaccine will be a key tool in achieving the targets set by WHO in the End TB Strategy. Tuberculosis vaccine development is difficult and slow. Substantial progress has been made in research and development of tuberculosis vaccines in the past 20 years, and two clinical trial results from 2018 provide reason for optimism. However, many challenges to the successful licensure and deployment of an effective tuberculosis vaccine remain. The development of new tools for vaccine evaluation might facilitate these processes, and continued collaborative working and sustained funding will be essential.

*Commission Update*

**[The Lancet Respiratory Medicine Commission: 2019 update: epidemiology, pathogenesis, transmission, diagnosis, and management of multidrug-resistant and incurable tuberculosis](#)**

Keertan Dheda, Tawanda Gumbo, Gary Maartens, Kelly E Dooley, Megan Murray, Jennifer Furin, Edward A Nardell, Robin M Warren, on behalf of The Lancet Respiratory Medicine drug-resistant tuberculosis Commission group

*Summary*

The Lancet Respiratory Medicine Commission on drug-resistant tuberculosis was published in 2017, which comprehensively reviewed and provided recommendations on various aspects of the disease. Several key new developments regarding drug-resistant tuberculosis are outlined in this Commission Update. The WHO guidelines on treating drug-resistant tuberculosis were updated in 2019 with a reclassification of second line anti-tuberculosis drugs. An injection-free MDR tuberculosis treatment

regimen is now recommended. Over the past 3 years, advances in treatment include the recognition of the safety and mortality benefit of bedaquiline, the finding that the 9–11 month injectable-based 'Bangladesh' regimen was non-inferior to longer regimens, and promising interim results of a novel 6 month 3-drug regimen (bedaquiline, pretomanid, and linezolid). Studies of explanted lungs from patients with drug-resistant tuberculosis have shown substantial drug-specific gradients across pulmonary cavities, suggesting that alternative dosing and drug delivery strategies are needed to reduce functional monotherapy at the site of disease. Several controversies are discussed including the optimal route of drug administration, optimal number of drugs constituting a regimen, selection of individual drugs for a regimen, duration of the regimen, and minimal desirable standards of antibiotic stewardship. Newer rapid nucleic acid amplification test platforms, including point-of-care systems that facilitate active case-finding, are discussed. The rapid diagnosis of resistance to other drugs, (notably fluoroquinolones), and detection of resistance by targeted or whole genome sequencing will probably change the diagnostic landscape in the near future.

Research Article | published 30 Aug 2019 PLOS ONE  
<https://doi.org/10.1371/journal.pone.0219040>

*Abstract*

Background

In April 2016, an emergency vaccination campaign using one dose of Oral Cholera Vaccine (OCV) was organized in response to a cholera outbreak that started in Lusaka in February 2016. In December

2016, a second round of vaccination was conducted, with the objective of increasing the duration of protection, before the high-risk period for cholera transmission. We assessed vaccination coverage for the first and second rounds of the OCV campaign.

#### Methods

Vaccination coverage was estimated after each round from a sample selected from targeted-areas for vaccination using a cross-sectional survey in to establish the vaccination status of the individuals recruited. The study population included all individuals older than 12 months residing in the areas targeted for vaccination. We interviewed 505 randomly selected individuals after the first round and 442 after the second round. Vaccination status was ascertained either by vaccination card or verbal reporting. Households were selected using spatial random sampling.

#### Results

The vaccination coverage with two doses was 58.1% (25/43; 95%CI: 42.1–72.9) in children 1–5 years old, 59.5% (69/116; 95%CI: 49.9–68.5) in children 5–15 years old and 19.9% (56/281; 95%CI: 15.4–25.1) in adults above 15 years old. The overall dropout rate was 10.9% (95%CI: 8.1–14.1). Overall, 69.9% (n = 309/442; 95%CI: 65.4–74.1) reported to have received at least one OCV dose.

#### Conclusions

The areas at highest risk of suffering cholera outbreaks were targeted for vaccination obtaining relatively high vaccine coverage after each round. However, the long delay between doses in areas subject to considerable population movement resulted in many individuals receiving only one OCV dose. Additional vaccination campaigns may be required to sustain protection over time in case of persistence of risk. Further evidence is needed to establish a maximum optimal interval time of a delayed second dose and variations in different settings.

### **[Widespread male sex bias in mammal fossil and museum collections](#)**

Graham Gower, Lindsey E. Fenderson, Alexander T. Salis, Kristofer M. Helgen, Ayla L. van Loenen, Holly Heiniger, Emilia Hofman-Kamińska, Rafał Kowalczyk, Kieren J. Mitchell, Bastien Llamas, and Alan Cooper

PNAS first published September 3, 2019. <https://doi.org/10.1073/pnas.1903275116>

#### *Significance*

The extent to which the fossil record provides an accurate picture of past life is an important issue that is often difficult to assess. We genetically sexed 277 mammalian subfossils using high-throughput sequencing of ancient DNA, and found a strong male bias (~75%) in Pleistocene bison (n = 186) and brown bears (n = 91), matching signals previously reported for mammoth. Similarly, a male bias was also found in species of nearly all mammal orders in 4 large museum collections. For mammals, we suggest both male behavior and appearance can lead to increased chances of representation in fossil and museum collections, and this previously unrecognized sex bias could have substantial implications for views of past population and ecological processes.

#### *Abstract*

A recent study of mammoth subfossil remains has demonstrated the potential of using relatively low-coverage high-throughput DNA sequencing to genetically sex specimens, revealing a strong male-biased sex ratio [P. Pečnerová et al., *Curr. Biol.* 27, 3505–3510.e3 (2017)]. Similar patterns were predicted for steppe bison, based on their analogous female herd-based structure. We genetically sexed subfossil remains of 186 Holarctic bison (*Bison* spp.), and also 91 brown bears (*Ursus arctos*),

which are not female herd-based, and found that ~75% of both groups were male, very close to the ratio observed in mammoths (72%). This large deviation from a 1:1 ratio was unexpected, but we found no evidence for sex differences with respect to DNA preservation, sample age, material type, or overall spatial distribution. We further examined ratios of male and female specimens from 4 large museum mammal collections and found a strong male bias, observable in almost all mammalian orders. We suggest that, in mammals at least, 1) wider male geographic ranges can lead to considerably increased chances of detection in fossil studies, and 2) sexual dimorphic behavior or appearance can facilitate a considerable sex bias in fossil and modern collections, on a previously unacknowledged scale. This finding has major implications for a wide range of studies of fossil and museum material.

### **[Controversy over dengue vaccine risk](#)**

By Jon Cohen

Science06 Sep 2019 : 961-962 Restricted Access

*All immunized Filipino kids should be tested, some say.*

*Summary*

Shortly after Dengvaxia came to market in 2015, the Philippines launched a massive campaign to immunize children against the dreaded diseases. After about 1 million children were vaccinated, Sanofi Pasteur, the Paris-based maker of the product, revealed that ongoing clinical trials had found a rare, dangerous complication. Four distinct variants of dengue infect humans. In a well-known phenomenon, people infected with one strain who become infected with a second one become vulnerable to severe dengue, which can cause life-threatening shock and hemorrhagic fever. The vaccine, when given to children who had never been infected with dengue, primes some for that rare phenomenon of severe disease. Now, some researchers are calling for studies that would test the vaccinated children and identify the ones most at risk. They contend that if parents knew their children were at increased risk of severe disease, they could more aggressively seek care if they suspected dengue. This also might alleviate confusion for some parents who have blamed the vaccine for the death of their children. But no one has sponsored the study yet.

### **[In search of Sac Balam](#)**

By Lizzie Wade

Science06 Sep 2019 : 966-970 Restricted Access

*The Lacandon Maya resisted Spanish conquest for nearly 200 years. This summer, archaeologists went looking for their capital.*

*Summary*

This summer, a small team of archaeologists, guides, and observers trekked into the Montes Azules Biosphere Reserve in southern Mexico in search of a lost city. Called Sac Balam, or "the white jaguar," it was founded more than 400 years ago by the Lacandon Maya, one of several Indigenous groups in southern Mexico and Central America who resisted Spanish colonial rule for centuries. Until 1695, that is, when the Spanish finally found the city. Less than 20 years later, they forcibly relocated its inhabitants and abandoned the place once and for all. It faded off colonial maps and back into the forest. If found, Sac Balam could offer archaeologists an unparalleled time capsule of Lacandon culture, showing how they preserved their independence as the world changed around them.

*Genome-wide analysis of ancient DNA from more than 500 individuals from Central and South Asia illuminates the spread of Indo-European languages.*

Ancient DNA has allowed us to begin tracing the history of human movements across the globe. Narasimhan et al. identify a complex pattern of human migrations and admixture events in South and Central Asia by performing genetic analysis of more than 500 people who lived over the past 8000 years (see the Perspective by Schaefer and Shapiro). They establish key phases in the population prehistory of Eurasia, including the spread of farming peoples from the Near East, with movements both westward and eastward. The people known as the Yamnaya in the Bronze Age also moved both westward and eastward from a focal area located north of the Black Sea. The overall patterns of genetic clines reflect similar and parallel patterns in South Asia and Europe.

Social innovation occurs in different ways in different countries, and one can learn a great deal from the experiences of others around the world. The cover story in the Summer 2019 issue of *Stanford Social Innovation Review*, "China's New Model of Blockchain-Driven Philanthropy," is a good example of that principle. China shows how blockchain can help nonprofit organizations become more transparent and trustworthy.

**New Technologies: Where to?**

This issue focuses on new technologies and their potential benefits for humanity as well as their expanding use in advancing the 2030 Agenda. It explores the promise of our digital age, while posing important questions about where these technologies are leading us, and how their misuse could also lead to increased inequality and conflict.
