This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortia and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel’s geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted, and the elements of each edition are presented as a set of blog posts at https://ge2p2-center.net/. This blog allows full-text searching of over 6,000 entries.

Request email delivery of the pdf:
If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

The Sentinel is a service of the GE2P2 Global Foundation, which is solely responsible for its content. Comments and suggestions should be directed to:

Statelessness

GUIDELINES ON STATELESSNESS NO.5: Loss and Deprivation of Nationality under Articles 5-9 of the 1961 Convention on the Reduction of Statelessness
UNHCR
Distr. GENERAL HCR/GS/20/05 May 2020  Original: English  38 pages

Media Release
UNHCR releases new guidelines on loss and deprivation of nationality
21 May 2020
UNHCR, the UN Refugee Agency, has today issued new guidelines on the loss and deprivation of nationality. The guidance is intended to assist governments and policy makers in interpreting relevant international law.

“Decisions to deprive people of nationality have grave and far-reaching consequences not just for the individuals themselves but also for the broader community. It is by no means ideal nor in anyone or any State’s interest for people to be left stateless and on the margins of society,” said UNHCR’s Assistant High Commissioner for Protection, Gillian Triggs.

“While this is a practice that is increasingly being resorted to in most cases as a punitive measure, we hope this guidance will promote a principled and consistent approach to decision making, mitigating the risk of statelessness arising, in accordance with the law.”

The guidelines contain interpretive guidance on the 1961 Convention on the Reduction of Statelessness, one of two key statelessness treaties which together with the 1954 Convention on the Status of Stateless Persons, provide the legal framework to prevent statelessness from occurring and to protect people who are already stateless. They also contain guidance on complementary international human rights law relevant to deprivation of nationality.

The loss of nationality refers to circumstances where an individual’s nationality may be automatically withdrawn by the operation of the law, for example where national law provides that nationality will be lost in situations of prolonged residence abroad. Deprivation refers to situations where a State actively takes nationality away from its citizens.

With the right to a nationality widely recognized as a fundamental human right, international law prohibits the arbitrary deprivation of nationality, including on racial, ethnic, religious or political grounds.
As a general rule, the 1961 Convention also prohibits the deprivation of nationality where it would leave a person stateless. There are very limited exceptions to this rule, including where nationality has been acquired though misrepresentation or fraud.

In specific circumstances, where countries expressly retained their right to do so when joining the Convention and provisions already exist in national law, behavior inconsistent with the duty of loyalty to the State may also be grounds for exception to the prohibition where, for example, it is seriously prejudicial to a State’s vital interests.

However, governments would still have a duty to determine whether decisions to deprive an individual of nationality would result in statelessness, as well as to ensure that procedural safeguards, such as the right to a fair hearing, are met.

In accordance with its mandate on statelessness, UNHCR provides guidance on relevant international law. The Guidelines on Loss and Deprivation of Nationality are the fifth in a series of guidelines on statelessness issued by the agency.

The full guidelines are available [here](#).

Locusts

**World Bank Announces $500 Million to Fight Locusts, Preserve Food Security and Protect Livelihoods**

_Emergency Financing for Locust Affected Countries will help people recover from losses_

WASHINGTON, May 21, 2020 — The World Bank Group approved today a US$500 million program to help countries in Africa and the Middle East fight the locust swarms that are threatening the food security and livelihoods of millions of people.

The Emergency Locust Response Program (ELRP), approved today by the World Bank’s Board of Executive Directors, will focus on providing immediate assistance to help poor and vulnerable farmers, herders, and rural households overcome one of the worst locust upsurges in decades. ELRP will provide immediate support to affected households through targeted social safety nets like cash transfers, while investing in the medium-term recovery of agriculture and livestock production systems and rural livelihoods in affected countries.

The first countries to be financed under the initial phase of the program are Djibouti, Ethiopia, Kenya, and Uganda, with a total financing package of US$160 million.

“Locust swarms present a double crisis for countries that are also battling the COVID-19 pandemic,” said World Bank Group President David Malpass. “Together, this food supply emergency combined with the pandemic and economic shutdown in advanced economies places some of the world’s poorest and most vulnerable people at even greater risk.”
East Africa already has 22.5 million severely food insecure people and 10.8 million forcibly displaced people, according to the UN’s Office for the Coordination of Humanitarian Affairs. The World Bank has estimated that, without broad-scale, coordinated control measures to reduce locust populations and prevent their spread to new areas, potential damages and losses to crop and livestock production and related assets in the greater Horn of Africa, including Yemen, could reach as high as US$8.5 billion by the end of this year. By helping to mobilize a rapid response and more effective locust control measures, anticipated damages and losses will still be an estimated US$2.5 billion. This is why the ELRP will fund measures to protect livelihoods of the poor and vulnerable impacted by the locust crisis.

In addition to protecting livelihoods, physical assets and human capital of affected households, the program will deliver seed packages and other inputs to affected households to help restore farm production and livelihoods as quickly as possible. It will also finance investments to strengthen surveillance and early warning systems so that countries are better prepared to combat future outbreaks.

**As of early May 2020, locust swarms have infested 23 countries across East Africa, the Middle East, and South Asia. This upsurge is the biggest outbreak faced by some countries in 70 years.** Favorable breeding conditions through May will likely result in a new round of swarms in late June and July, coinciding with the start of the harvest season.

The program’s design builds on the strong technical foundation of desert locust management created by the Food and Agriculture Organization of the United Nations (FAO), which is already working with affected countries to ensure locust control operations are done safely and effectively. The World Bank and the FAO will enhance their ongoing collaboration through the program...

**Stewardship**

*The State of the World’s Forests – 2020 :: Forests, Biodiversity and People*
FAO, UNEP
Rome, 2020 :: 214 pages

*Excerpt*

**WHAT IS FOREST BIOLOGICAL DIVERSITY?**

Forest biological diversity is a broad term that refers to all life forms found within forested areas and the ecological roles they perform. As such, forest biological diversity encompasses not just trees, but the multitude of plants, animals and microorganisms that inhabit forest areas and their associated genetic diversity.

Forest biological diversity can be considered at different levels, including ecosystem, landscape, species, population and genetic. Complex interactions can occur within and between these levels. In biologically diverse forests, this complexity allows organisms to adapt to continually changing environmental conditions and to maintain ecosystem functions.

In the annex to Decision II/9 (CBD, n.d.a), the Conference of the Parties to the CBD recognized that:
“Forest biological diversity results from evolutionary processes over thousands and even millions of years which, in themselves, are driven by ecological forces such as climate, fire, competition and disturbance. Furthermore, the diversity of forest ecosystems (in both physical and biological features) results in high levels of adaptation, a feature of forest ecosystems which is an integral component of their biological diversity. Within specific forest ecosystems, the maintenance of ecological processes is dependent upon the maintenance of their biological diversity.”

Media Release
UN report: As the world’s forests continue to shrink, urgent action is needed to safeguard their biodiversity
22 May 2020, Rome/Nairobi – Urgent action is needed to safeguard the biodiversity of the world’s forests amid alarming rates of deforestation and degradation, according to the latest edition of The State of the World’s Forests released today.

Published on the International Day for Biological Diversity (22 May), the report shows that the conservation of the world’s biodiversity is utterly dependent on the way in which we interact with and use the world’s forests.

The report was produced by the Food and Agriculture Organization of the United Nations (FAO) in partnership, for the first time, with the United Nations Environment Programme (UNEP), and technical input from the UN Environment Programme World Conservation Monitoring Centre (UNEP-WCMC). It highlights that some 420 million hectares of forest have been lost through conversion to other land uses since 1990, although the rate of deforestation has decreased over the past three decades.

The COVID-19 crisis has thrown into sharp focus the importance of conserving and sustainably using nature, recognizing that people’s health is linked to ecosystem health.

Protecting forests is key to this, as they harbour most of the Earth’s terrestrial biodiversity. This report shows that forests contain 60,000 different tree species, 80 percent of amphibian species, 75 percent of bird species, and 68 percent of the Earth’s mammal species.

FAO’s Global Forest Resources Assessment 2020, noted in the report, found that despite a slowing of the rate of deforestation in the last decade, some 10 million hectares are still being lost each year through conversion to agriculture and other land uses.

“Deforestation and forest degradation continue to take place at alarming rates, which contributes significantly to the ongoing loss of biodiversity,” FAO Director-General, QU Dongyu, and the Executive Director of UNEP, Inger Andersen, said in the foreword.

The report presents a comprehensive overview of forest biodiversity, including world maps revealing where forests still hold rich communities of fauna and flora, such as the northern Andes and parts of the Congo Basin, and where they have been lost.

Conservation and sustainable use:
In this report, a special study from the Joint Research Centre of the European Commission and the US Forest Service found 34.8 million patches of forests in the world, ranging in
size from 1 hectare to 680 million hectares. Greater restoration efforts to reconnect forest fragments are urgently needed.

As FAO and UNEP prepare to lead the United Nations Decade on Ecosystem Restoration from 2021 and as countries consider a Global Biodiversity Framework for the future, Qu and Andersen both expressed their commitment for increased global cooperation to restore degraded and damaged ecosystems, combat climate change and safeguard biodiversity.

“To turn the tide on deforestation and the loss of biodiversity, we need transformational change in the way in which we produce and consume food,” said QU and Andersen. “We also need to conserve and manage forests and trees within an integrated landscape approach and we need to repair the damage done through forest restoration efforts.”

Original research
Arts-based approaches to promoting health in sub-Saharan Africa: a scoping review (21 May, 2020)
Christopher Bunn, Chisomo Kalinga, Otiyela Mtema, Sharifa Abdulla, Angel Dillip, John Lwanda, Sally Mtenga, Jo Sharp, Zoë Strachan, Cindy M Gray

Abstract
Introduction
Arts-based approaches to health promotion have been used widely across sub-Saharan Africa (SSA), particularly in public health responses to HIV/AIDS. Such approaches draw on deep-rooted historical traditions of indigenous groups in combination with imported traditions which emerged from colonial engagement. To date, no review has sought to map the locations, health issues, art forms and methods documented by researchers using arts-based approaches in SSA.

Methods
Using scoping review methodology, 11 databases spanning biomedicine, arts and humanities and social sciences were searched. Researchers screened search results for papers using predefined criteria. Papers included in the review were read and summarised using a standardised proforma. Descriptive statistics were produced to characterise the location of the studies, art forms used or discussed, and the health issues addressed, and to determine how best to summarise the literature identified.

Results
Searches identified a total of 59,794 records, which reduced to 119 after screening. We identified literature representing 30 (62.5%) of the 48 countries in the SSA region. The papers covered 16 health issues. The majority (84.9%) focused on HIV/AIDS-related work, with Ebola (5.0%) and malaria (3.3%) also receiving attention. Most studies used a single art form (79.0%), but a significant number deployed multiple forms (21.0%). Theatre-based approaches were most common (43.7%), followed by music and song (22.6%), visual arts (other) (9.2%), storytelling (7.6%) and film (5.0%).

Conclusions
Arts-based approaches have been widely deployed in health promotion in SSA, particularly in response to HIV/AIDS. Historically and as evidenced by this review, arts-based approaches have provided a platform to facilitate enquiry, achieved significant reach and in some instances supported demonstrable health-related change. Challenges relating to content, power relations and evaluation have been reported. Future research should focus on broadening application to other conditions, such as non-communicable diseases, and on addressing challenges raised in research to date.

**Key questions**

**What is already known?**
:: Arts-based approaches to health improvement have been used across sub-Saharan Africa (SSA), with some studies reporting positive outcomes.
:: No comprehensive scoping review of this work has been produced.
:: A rich array of approaches to using arts in support of health have been pursued in the global north, but the decolonising methodology movement suggests we should be careful not to import these into global south contexts.

**What are the new findings?**
:: Our review suggests that an overwhelming majority of studies have focused on HIV/AIDS, and that theatre-based approaches were the most common, but music and song, visual arts, storytelling and film have received sustained attention in the research literature.
:: Arts-based approaches have facilitated research enquiry, reach large numbers with health-promoting messages and initiatives, and in some instances supported demonstrable health-related change.
:: Challenges relating to the generation and suitability of content, power relations between researchers and target community and appropriate forms of evaluation have been reported.

**What do the new findings imply?**
:: In SSA, arts-based approaches to health promotion have yet to be widely applied by researchers outside of HIV/AIDS, suggesting that future research could develop approaches to non-communicable diseases, neglected tropical diseases and communicable diseases other than HIV/AIDS.
:: There is great scope to develop theories of and methodologies for arts-based approaches to health in SSA that dialogue with, but do not mimic, those developed in the global north.

**COVID-19 :: Human Development Index**

COVID-19: Human development on course to decline this year for the first time since 1990

Posted on May 20, 2020

Concerted action with a focus on equity could still limit the impacts of this unprecedented crisis: closing the digital divide would reduce by more than two-thirds the number of children currently not learning because of school closures.

New York – Global human development – which can be measured as a combination of the world’s education, health and living standards – could decline this year for the first time since the concept was introduced in 1990, the United Nations Development Programme (UNDP) warned today.
“The world has seen many crises over the past 30 years, including the Global Financial Crisis of 2007-09. Each has hit human development hard but, overall, development gains accrued globally year-on-year,” said UNDP Administrator Achim Steiner. “COVID-19 – with its triple hit to health, education, and income – may change this trend.”

Declines in fundamental areas of human development are being felt across most countries - rich and poor - in every region.

COVID-19’s global death toll has exceeded 300,000 people, while the global per capita income this year is expected to fall by four per cent.

With school closures, UNDP estimates of the “effective out-of-school rate”—the percentage of primary school-age children, adjusted to reflect those without Internet access—indicate that 60 per cent of children are not getting an education, leading to global levels not seen since the 1980s.

The combined impact of these shocks could signify the largest reversal in human development on record...

COVID-19 :: World Health Assembly Action

Editor’s Note:
We present below key text from the COVID-19 Response resolution adopted at World Health Assembly [WHA73] with Editor’s text bolding.

SEVENTY-THIRD WORLD HEALTH ASSEMBLY
COVID-19 response
... **OP1** Calls for, in the spirit of unity and solidarity, intensification of cooperation and collaboration at all levels to contain, control and mitigate the COVID-19 pandemic;

**OP2** Acknowledges the key leadership role of WHO and the fundamental role of the United Nations system in catalysing and coordinating the comprehensive global response to the COVID-19 pandemic and the central efforts of Member States therein;

**OP3** Expresses its highest appreciation of and support to the dedication, efforts and sacrifices, above and beyond the call of duty of health professionals, health workers and other relevant frontline workers, as well as the WHO Secretariat, in responding to the COVID-19 pandemic;

**OP4** Calls for the universal, timely and equitable access to and fair distribution of all quality, safe, efficacious and affordable essential health technologies and products including their components and precursors required in the response to the COVID-19 pandemic as a global priority, and the urgent removal of unjustified obstacles thereto; consistent with the provisions of relevant international treaties including the provisions of the TRIPS agreement and the flexibilities as confirmed by the Doha Declaration on the TRIPS Agreement and Public Health;

**OP5** Reiterates the importance of urgently meeting the needs of low- and middle-income countries in order to fill the gaps to overcome the pandemic through timely and adequate development and humanitarian assistance;

**OP6** Recognizes the role of extensive immunization against COVID-19 as a global public good for health in preventing, containing and stopping transmission in order to bring the pandemic to an end, once safe, quality, efficacious, effective, accessible and affordable vaccines are available;

**OP8 CALLS on international organizations and other relevant stakeholders to:**

...**OP8.2** Work collaboratively at all levels to develop, test, and scale-up production of safe, effective, quality, affordable diagnostics, therapeutics, medicines and vaccines for the COVID-19 response, including, existing mechanisms for voluntary pooling and licensing of patents to facilitate timely, equitable and affordable access to them, consistent with the provisions of relevant international treaties including the provisions of the TRIPS agreement and the flexibilities as confirmed by the Doha Declaration on the TRIPS Agreement and Public Health;

**OP9 REQUESTS the Director-General to:**

**OP9.1** Continue to work with the United Nations Secretary-General and relevant multilateral organizations, including the signatory agencies of the Global Action Plan for Healthy Lives and Well-Being, on a comprehensive and coordinated response across the United Nations system to support Member States in their responses to the COVID-19 pandemic in full cooperation with governments, as appropriate, demonstrating leadership on health in the United Nations system, and continue to act as the health cluster lead in the United Nations humanitarian response;

**OP9.2** Continue to build and strengthen the capacities of WHO at all levels to fully and effectively perform the functions entrusted to it under the IHR;
OP9.3 Assist and continue to call upon all States’ Parties to take the actions according to the provisions of the IHR, including by providing all necessary support to countries for building, strengthening and maintaining their capacities to fully comply with the IHR;

OP9.5 Assist countries upon request in developing, implementing and adapting relevant national response plans to COVID-19, by developing, disseminating and updating normative products and technical guidance, learning tools, data and scientific evidence for COVID-19 responses, including to counter misinformation and disinformation, as well as malicious cyber activities, and continue to work against substandard and falsified medicines and medical products;

OP9.6 Continue to work closely with the World Organisation for Animal Health (OIE), the Food and Agriculture Organization of the United Nations (FAO) and countries, as part of the One-Health Approach to identify the zoonotic source of the virus and the route of introduction to the human population, including the possible role of intermediate hosts, including through efforts such as scientific and collaborative field missions, which will enable targeted interventions and a research agenda to reduce the risk of similar events as well as to provide guidance on how to prevent SARS-COV2 infection in animals and humans and prevent the establishment of new zoonotic reservoirs, as well as to reduce further risks of emergence and transmission of zoonotic diseases;...

OP9.8 Rapidly, and noting OP2 of RES/74/274 and in consultation with Member States, and with inputs from relevant international organizations civil society, and the private sector, as appropriate, identify and provide options that respect the provisions of relevant international treaties, including the provisions of the TRIPS agreement and the flexibilities as confirmed by the Doha Declaration on the TRIPS Agreement and Public Health to be used in scaling up development, manufacturing and distribution capacities needed for transparent equitable and timely access to quality, safe, affordable and efficacious diagnostics, therapeutics, medicines, and vaccines for the COVID-19 response taking into account existing mechanisms, tools, and initiatives, such as the Access to COVID-19 Tools (ACT) accelerator, and relevant pledging appeals, such as “The Coronavirus Global Response” pledging campaign, for the consideration of the Governing Bodies;...

OP9.10 Initiate, at the earliest appropriate moment, and in consultation with Member States, a stepwise process of impartial, independent and comprehensive evaluation, including using existing mechanisms, as appropriate, to review experience gained and lessons learned from the WHO-coordinated international health response to COVID-19, including (i) the effectiveness of the mechanisms at WHO’s disposal; (ii) the functioning of the IHR and the status of implementation of the relevant recommendations of the previous IHR Review Committees; (iii) WHO’s contribution to United Nations-wide efforts; and (iv) the actions of WHO and their timelines pertaining to the COVID-19 pandemic, and make recommendations to improve global pandemic prevention, preparedness, and response capacity, including through strengthening, as appropriate, WHO’s Health Emergencies Programme...

COVID-19: Impacts
At least 80 million children under one at risk of diseases such as diphtheria, measles and polio as COVID-19 disrupts routine vaccination efforts, warn Gavi, WHO and UNICEF

Agencies call for joint effort to safely deliver routine immunization and proceed with vaccination campaigns against deadly vaccine-preventable diseases.

GENEVA/NEW YORK, 22 May 2020 – COVID 19 is disrupting life-saving immunization services around the world, putting millions of children – in rich and poor countries alike – at risk of diseases like diphtheria, measles and polio. This stark warning comes from the World Health Organization, UNICEF and Gavi, the Vaccine Alliance ahead of the Global Vaccine Summit on 4 June, at which world leaders will come together to help maintain immunization programmes and mitigate the impact of the pandemic in lower-income countries.

According to data collected by the World Health Organization, UNICEF, Gavi and the Sabin Vaccine Institute, provision of routine immunization services is substantially hindered in at least 68 countries and is likely to affect approximately 80 million children under the age of 1 living in these countries...

MASS IMMUNIZATION CAMPAIGNS TEMPORARILY DISRUPTED

Many countries have temporarily and justifiably suspended preventive mass vaccination campaigns against diseases like cholera, measles, meningitis, polio, tetanus, typhoid and yellow fever, due to risk of transmission and the need to maintain physical distancing during the early stages of the COVID-19 pandemic.

Measles and polio vaccination campaigns, in particular, have been badly hit, with measles campaigns suspended in 27 countries and polio campaigns put on hold in 38 countries. At least 24 million people in 21 Gavi-supported lower-income countries are at risk of missing out on vaccines against polio, measles, typhoid, yellow fever, cholera, rotavirus, HPV, meningitis A and rubella due to postponed campaigns and introductions of new vaccines...

PUBLIC HEALTH AND SOCIAL MEASURES FOR COVID-19 PREPAREDNESS AND RESPONSE IN LOW CAPACITY AND HUMANITARIAN SETTINGS

Interim Guidance  Version 1
Inter-Agency Standing Committee :: Developed by ICRC, IFRC, IOM, NRC, UNICEF, UN-HABITAT, UNHCR, WHO in consultation with IASC members
May 2020 :: 29 pages

OBJECTIVES AND TARGET AUDIENCE

This Interim Guidance outlines how key public health and social measures needed to reduce the risk of COVID-19 spread and the impact of the disease can be adapted for use in low capacity and humanitarian settings. The recommendations outlined here need to be adjusted to the scale of transmission1, context and resources, in order to achieve the objective of managing COVID-19, namely to reduce transmission and facilitate the detection and management of infected and exposed individuals within the population. The Guidance is intended for humanitarian and development actors of all operational levels working with communities, as well as local authorities involved in COVID-19 preparedness and response operations in these settings, in support of national and local governments and plans. Additional considerations for support to residents of urban informal settlements and slums are available in Annex 1.

HIGHLIGHTS
:: WHO has published a COVID-19 Monitoring and Evaluation Framework listing the key public health and essential health services and systems indicators to monitor preparedness, response, and situations during the COVID-19 pandemic.
:: WHO has updated a document on Operational Planning Guidelines to Support Country Preparedness and Response. The document provides a practical guide that can be used by national authorities to develop and update their COVID-19 national plans across the major pillars of COVID-19 preparedness and response.
:: WHO published an interim guidance on Framework for decision-making: implementation of mass vaccination campaigns in the context of COVID-19. The document describes the principles to consider when deliberating the implementation of mass vaccination campaigns for prevention of vaccine-preventable diseases and high impact diseases (VPD/HID), and when assessing risks and benefits of conducting outbreak-response vaccination campaigns to respond to VPD/HID outbreaks.
:: WHO has published an interim guidance on Controlling the spread of COVID-19 at ground crossings advising countries to reduce the spread of COVID-19 resulting from travel, transportation, and trade on and around ground crossings.
Emergencies

Ebola – DRC+
Public Health Emergency of International Concern (PHEIC)

Ebola Outbreak in DRC 93: 19 May 2020
[Excerpts]
Situation Update
From 11 to 17 May 2020, there have been no new confirmed cases of Ebola virus disease (EVD) reported in Democratic Republic of the Congo. Since the resurgence of the outbreak on 10 April 2020, seven confirmed cases have been reported from Kasanga, Malepe and Kanzulinzuli Health Areas in Beni Health Zone. So far, no definitive source of infection has been identified...

Conclusion
Despite the launch of the 42-day countdown, efforts to retrieve the missing confirmed case and investigations into the origin of the latest cluster are still ongoing. Given the long duration and large magnitude of the Ebola outbreak in North Kivu, South Kivu and Ituri Provinces in the Democratic Republic of the Congo, there is a risk of re-emergence of the virus during the lead up to the declaration of the end of the outbreak, and for several months following that declaration. In the coming weeks and months, it is crucial to maintain a strong and robust surveillance system in order to detect, isolate, test and treat new suspected cases as early as possible, to improve outcome of potential cases, and to break new chains of transmission. Maintaining strong communication and coordination among partners, authorities and affected communities, as well as continuing support for and engagement with EVD survivors are essential in this outbreak response.

Emergencies

POLIO
Public Health Emergency of International Concern (PHEIC)

Polio this week as of 19 May 2020
:: The Independent Monitoring Board (IMB) of the GPEI has announced the appointment of new members of a reconstituted polio Transition Independent Monitoring Board (TIMB). Read more [see below]...

Nature Holds Solution to Preventing Pandemics, Secretary-General Says in Observance Message, Stressing Need for Sustainable Management of Biological Diversity

Following is UN Secretary-General António Guterres’ message on the International Day for Biological Diversity, observed on 22 May:

This year’s message for the International Day for Biological Diversity is clear. Our solutions are in nature. Preserving and sustainably managing biodiversity is necessary for mitigating climate disruption, guaranteeing water and food security and even preventing pandemics. COVID-19 — which emanated from the wild — has shown how human health is intimately connected with our relationship to the natural world. As we encroach on nature and deplete vital habitats, increasing numbers of species are at risk. That includes humanity and the future we want.

As we seek to build back better from the current crisis, let us work together to preserve biodiversity so we can achieve our Sustainable Development Goals. That is how we will protect health and well-being for generations to come.

South Sudan: Bachelet calls for accountability as hundreds reported killed in intercommunal violence

Africa: We must act now to avoid a catastrophe, say rights chiefs

Michelle Bachelet, the UN’s High Commissioner for Human Rights, and Solomon Dersso, Chairperson of the African Commission on Human and Peoples’ Rights (ACHPR), called for urgent measures to help mitigate the impact of the pandemic.

As of 19 May, the disease had reached all 54 African States, infecting nearly 88,172 people. South Africa had the highest number of cases, with nearly 16,433 affected. The death toll on the continent stood at 2,834.

“We cannot afford to stand idly by and hope this most viral and deadly of diseases bypasses Africa, which is home to many of the world’s poorest countries who are simply not in position to handle such a pandemic,” Bachelet and Dersso said.

“The lives and livelihoods of hundreds of millions Africans are at stake not just due to COVID-19, but mostly due to the economic impacts of the COVID-19 response measures adopted both continentally and globally.”

**WHO and UNHCR join forces to improve health services for refugees, displaced and stateless people**
21 May 2020
The World Health Organization (WHO) and UNHCR, the UN Refugee Agency today signed a new agreement to strengthen and advance public health services for the millions of forcibly displaced people around the world.

The agreement updates and expands an existing 1997 agreement between the two organizations. A key aim this year will be to support ongoing efforts to protect some 70 million forcibly displaced people from COVID-19. Around 26 million of these are refugees, 80 per cent of whom are sheltered in low and middle-income countries with weak health systems. Another 40 million internally displaced people also require assistance.

For more than 20 years, UNHCR and WHO have worked together worldwide to safeguard the health of some of the world's most vulnerable populations. They have collaborated to provide health services to refugees in every region - from the onset of an emergency and through protracted situations, consistently advocating for the inclusion of refugees and stateless people in the national public health plans of host countries.

Today, the two organizations are working side by side to curb the spread of the COVID-19 pandemic and ensure that forcibly displaced people can access the health services they need, to keep safe from COVID-19 and other health challenges...

World Health Assembly puts multilateral cooperation and equity at heart of COVID-19 response
    Unitaid welcomes the adoption of a key Resolution by the World Health Assembly that sets out its response to the COVID-19 pandemic, that places multilateral cooperation and equity at its heart.
    The Resolution calls for universal, timely and equitable access to and fair distribution of all quality, safe, efficacious and affordable essential health technologies and products as a global priority.
    In particular Unitaid notes the call for collaboration to develop, test, and scale-up production of safe, effective, quality, affordable diagnostics, therapeutics, medicines and vaccines for the COVID-19 response, including, existing mechanisms for voluntary pooling and licensing of patents to facilitate timely, equitable and affordable access.
    Speaking after the adoption of the Resolution, Dr Philippe Duneton, Unitaid Executive Director a.i. said, “Unitaid is committed to working with its partners in the Access to COVID-19 Tools Accelerator
initiative to ensure that innovations to detect, treat and prevent COVID-19 are adapted and available to the most vulnerable populations.”

He continues, “As highlighted in the Resolution, Unitaid encourages all partners to take advantage of existing mechanisms for voluntary pooling and licensing of intellectual property rights for these global public goods, in particular the Medicines Patent Pool. We also recognise the importance of involving civil society and communities in shaping and delivering the response.”

21/05/2020

Contributing during an international webinar on ethical considerations in responding to the COVID-19 pandemic, prominent experts and field practitioners emphasised the important role that national ethics and bioethics committees can play as advisory bodies in shaping holistic approaches and building trust in COVID-19 responses.

More than 250 participants from around the world took part in the webinar held on 18th May 2020. Professor Peter-Paul Verbeek, Chair of UNESCO’s World Commission on the Ethics of Scientific Knowledge and Technology; Professor Ames Dhai, Chair of the South Africa National Bioethics Committee; Professor Joseph Mfutso Bengo, Chair of the Malawi National Bioethics Committee; and Professor Gyonggu Shin, Human Rights and International Advisor to Gwangju City in the Republic of Korea, were among the participating experts.
Held as part of the “Inclusion in the time of COVID-19” webinar series, the meeting analysed how ethical frameworks can advise and guide decision-makers and professionals who are in the frontline in fighting the pandemic.

There is an urgent need for governments to anticipate the unforeseen consequences of containment measures on the most vulnerable. Article 8 of the UNESCO Declaration on Bioethics and Human Rights stipulates that in applying and advancing scientific knowledge, medical practice and associated technologies, human vulnerability, dignity and integrity should be taken into account. In this context, the national ethics and bioethics committees play a unique role in fostering public multidisciplinary reasoning on complex questions raised by the pandemic, and ensuring that there are no blind spots in policymakers’ view...

Announcements
Cultural Rights and Climate Change | Contribution to the UN Special Rapporteur Report
18 May 2020.
Karima Bennoune, United Nations Special Rapporteur in the field of cultural rights, recently addressed a call for inputs for a report on “Cultural Rights and Climate Change” to be presented at the United Nations General Assembly in October 2020. The Special Rapporteur believes it is critical to think more broadly about the relationship between culture and cultural rights on the one hand, and addressing climate change on the other.

The report will address both the threats posed by climate change to culture, heritage and the cultural rights guaranteed by international law, including the right to take part in cultural life without discrimination, the rights to artistic and scientific freedom, the right to enjoy and access cultural heritage, as well as the positive potential of culture, heritage, and traditional knowledge, and the enjoyment of cultural rights, to help avoid catastrophic climate change and to adapt to the changes already in motion.

As the Special Rapporteur wrote in her letter inviting all stakeholders to take part, “...cultural resources, such as heritage, traditional knowledge, creativity and scientific freedom, can represent powerful resources for preventing and addressing challenges caused by climate change in a human rights respecting manner. In other words, culture and cultural rights are not only potential casualties; they are also part of the response, part of the solution.”

We are pleased to share ICOMOS’s submission to the call, which was prepared jointly by 3 ICOMOS Working Groups: the Climate Change and Heritage Working Group (CCHWG), the Our Common Dignity Initiative – Rights Based Approaches Working Group (OCDI-RBA WG), and the Sustainable Development Working Group (SDGWG)...

USAID Announces Nearly $23.4 Million in Additional Humanitarian Assistance to Contain Ebola in the Democratic Republic of Congo
May 19, 2020
The United States, through the U.S. Agency for International Development (USAID), is providing nearly $23.4 million in additional humanitarian assistance to help end the ongoing outbreak of Ebola in the Eastern Democratic Republic of Congo (DRC) and neighboring countries, the second-largest outbreak of the disease on record. This brings the total funding from USAID since the beginning of the outbreak in August 2018 to over $340 million, which includes support for regional Ebola-preparedness activities in the DRC and neighboring countries. Across the U.S. Government, since the beginning of the outbreak, the United States has contributed nearly $600 million in support of the efforts of the Government of the DRC and partners to end the Ebola outbreak, including more recently through the new U.S.-DRC Privileged Partnership for Peace and Prosperity.

Acting Administrator John Barsa Letter to UN Secretary General Guterres
May 18, 2020
As the largest donor of global health and humanitarian assistance, the United States always has led the world through times of strife, turmoil, and uncertainty. The current pandemic of COVID-19 is no different. Thus far, of the $650.7 million allocated from supplemental funding by the U.S. Agency for International Development (USAID) to combat the pandemic globally, we have provided $45.3 million to UN agencies. This is a fraction of USAID’s overall financial support for the UN’s activities, which in Fiscal Year 2019 totaled more than $3.5 billion in funds disbursed.

*Selected Announcements*

**PATH and partners coordinate COVID-19 global respiratory care response**
Seattle, WA, May 20, 2020 – PATH and a coalition of partners will support low- and middle-income countries (LMICs) in the development and execution of a comprehensive respiratory care plan to respond to COVID-19. The initiative will also pursue strategies to help prioritize and improve access to oxygen therapy and other essential equipment involved in respiratory care as an integral part of health systems strengthening, beyond the pandemic response.

Studies have shown that approximately 41 percent of confirmed COVID-19 patients—and in severe cases, more than 60 percent—received oxygen therapy to support breathing. In many health facilities across LMICs, oxygen therapy—including diagnosis, generation, and delivery equipment—is not reliably available, and, without careful planning and coordination, the rapid deployment of COVID-19 resources can quickly overwhelm existing health care systems.

A primary goal of the initiative is to coordinate tools, resources, and capabilities to ensure that those who need respiratory care due to COVID-19, or beyond, receive it. Immediate steps in that strategy will include supporting rapid respiratory care capacity assessments, supplier landscaping and outreach, global respiratory care response coordination, and informed decision-making on procurement and use of respiratory care products...

Statement

The Elders call for bold multilateralism to drive global response to COVID-19
21 May 2020
The Elders urge leaders to put multilateralism, solidarity and human rights at the heart of their response to the COVID-19 pandemic, and to prioritise the health and economic needs of poorer countries in the Global South in the coming weeks and months.

Ethical Leadership

Opinion

A global response to beat the virus is in all countries' interests. No one is safe until everyone is safe.

**Amid Confusion over the Public Charge Rule, Immigrant Families Continued Avoiding Public Benefits in 2019**
The current administration’s new public charge rule took effect in February 2020, significantly expanding the criteria for determining whether applicants for permanent residency, or green cards, may be denied based on past or potential use of government benefit programs. Even before the rule took effect, evidence shows the proposed rule produced widespread chilling effects nationally, meaning eligible immigrant families—

Positive Results from Preclinical Testing Support Clinical Development of COVID-19 DNA Vaccine
PHILADELPHIA — (May 20, 2020) — The Wistar Institute, an international biomedical research leader in cancer, immunology and infectious disease, announces a study reporting initial immunogenicity of a synthetic DNA vaccine for SARS-CoV-2 developed in collaboration with Inovio Pharmaceutical, Inc., and other scientists. Published in Nature Communications, the report focuses on immune studies in animals, which show induction of functional antibody responses and T-cell responses following immunization. The vaccine, INO-4800, was advanced to phase 1 clinical testing in 10 weeks (clinicaltrials.gov NCT04336410).

Practice
How to prevent and address safeguarding concerns in global health research programmes: practice, process and positionality in marginalised spaces (13 May, 2020)

Summary box
:: Safeguarding challenges in global health research are shaped by power relations (eg, gender, age) and context (eg, informal urban spaces) and include sexual abuse and exploitation, physical and psychological abuse, exploitation and neglect.
:: The literature on safeguarding in global health research is very limited; documented participatory processes that capture the situated knowledge, experience, difficulties and practice of different actors is required across varied contexts and health issues.
:: Safeguarding processes need to be committed to changing power relations through the use of approaches that build trust and are centred around the needs of survivors.

...Conclusions
Despite the resilience of the people and some progress in public health systems, African countries will still be stretched as the pandemic spreads across the continent and as the containment measures succumb to the pressures of time, limited resources, and increased rate of infections. In the meantime, African countries are leveraging investments in syndromic surveillance and case-finding through IDSR; scaling molecular testing capacity developed for other diseases; deploying trainees in field epidemiology training programs to lead the field response; and using her most precious resource—her young people—to undertake contact tracing, staff isolation centers and provide the supportive care that is available. The management of these resources has shown to be the best fit in national public health institutes, which have been rapidly established and strengthened in the last decade in Africa. So far, the response in Africa has been marked by innovation and resilience in the face of almost insurmountable odds and in the resounding collapse of multilateralism. However, as always, Africa will survive.

A cross-sectional analysis of falsified, counterfeit and substandard medicines in a low-middle income country
High prevalence of falsified, counterfeit and substandard medicines pose a threat to public health and treatment failure. This study aimed to investigate the quality of selected essential medicines available...

Abstract
Background
Child mortality has been reduced by more than 50 % over the past 30 years. A range of secular economic and social developments have been considered to explain this phenomenon. In this paper, we examine the association between ratification of the Convention on the Rights of the Child (CRC), which was specifically put in place to ensure the well-being of children, and declines in child mortality. Methods Data come from three sources: the United Nations Treaty Series Database, the World Bank World Development Indicators database and, the Polity IV database. Because CRC was widely ratified, leaving few control cases, we used interrupted times series analyses, which uses the trend in the health outcome before policy exposure to mathematically determine what the trend in the health outcome would have been after the policy exposure, if it had continued ‘as is’ – meaning, if the policy exposure had not occurred. Results
CRC ratification was associated with declining child mortality. CRC ratification was associated with a significant change in shorter-term child mortality trends in all groups except high-income, non-democratic countries and low-income democratic countries. CRC ratification was associated with long-term child mortality trends in all groups except middle-income, non-democratic countries.

Conclusions
Child mortality rates would likely have declined even in the absence of CRC ratification, but CRC is associated with a larger decline. Our findings provide a way to assess the effects of widely-held societal norms on health and demonstrate the moderating effects of democracy and income level.

Cities and towns are on the frontline of receiving and welcoming people who have been displaced. In this issue of FMR, policymakers, practitioners, researchers, representatives of cities and international city-focused alliances, and displaced people themselves debate the challenges facing both the urban authorities and their partners, and the people who come to live there. The issue also includes two ‘general’ articles on other topics.

Responding to Ebola in the Democratic Republic of Congo

by Humanitarian Practice Network

This edition of Humanitarian Exchange, co-edited with Anne Harmer, focuses on the response to the Ebola outbreak in the Democratic Republic of Congo (DRC). Although at the time of publication the outbreak appeared to have ended, over its course it claimed 2,200 lives, with more than 3,300 infected, making this the world’s second largest outbreak ever.

In the lead article, Natalie Roberts reflects on the extent to which humanitarian actors have applied learning from the outbreak in West Africa in 2014–2016. Richard Kojan and colleagues report on the NGO ALIMA’s flexible, patient-centred approach to reducing mortality, Marcela Ascuntar reflects on lessons learned from community feedback and Bernard Balibuno, Emanuel Mbuna Badjonga and Howard Mollett highlight the crucial role faith-based organisations have played in the response. In their article, Theresa Jones, Noé Kasali and Olivia Tulloch outline the work of the Bethesda counselling centre in Beni, which provides support to grieving families. Reflecting on findings from a recent assessment by Translators without Borders, Ellie Kemp describes the challenges involved in providing clear and accessible information on Ebola and the response, and Sung Joon Park and colleagues explain how humane care and treatment can help increase trust and confidence in the response. Stephen Mugamba and his co-authors highlight the importance of community involvement in Ebola research, and Gillian McKay and her co-authors examine the impact of the Ebola outbreak and response on sexual and reproductive health services.

Stacey Mearns, Kiryn Lanning and Michelle Gayer present an Ebola Readiness Roadmap to support NGOs in preparing for an outbreak, while Edward Kumakech, Maurice Sadlier, Aidan Sinnott and Dan Irvine report on a Gap Analysis tool looking at the communication, community engagement and compliance tracking activities that need to be in place before an Ebola vaccine is deployed. Emanuele Bruni and colleagues describe the development of a new monitoring and evaluation framework for strategic response planning. The edition ends with an article by Adelicia Fairbanks, who argues for an acceptance strategy in the DRC to improve security and access for responding agencies.

Scientific Integrity and Public Confidence in a Time of Crisis
This Viewpoint discusses the risks to patients and public health posed by the FDA’s politically pressured Emergency Use Authorization (EUA) of chloroquine and hydroxychloroquine for COVID-19 treatment, and proposes principles to follow to ensure new therapies are studied properly and quickly to maximize benefits and minimize risks to patients.

Increasing Access to FDA Inspection Reports on Irregularities and Misconduct in Clinical Trials
Rafael Dal-Ré, MD, PhD, MPH; Aaron S. Kesselheim, MD, JD, MPH; Florence T. Bourgeois, MD, MPH

This Viewpoint reviews notable examples of clinical trial misconduct identified by routine US Food and Drug Administration (FDA) clinical trial site inspections and argues that making inspection reports publicly available on the agency’s and trial registry websites is important to maintaining the integrity of clinical research.

Interrupting transmission of COVID-19: lessons from containment efforts in Singapore
Vernon J Lee, PhD, Calvin J Chiew, MPH, Wei Xin Khong, PhD
Journal of Travel Medicine, Volume 27, Issue 3, April 2020, taaa039,
https://doi.org/10.1093/jtm/taaa039

Despite multiple importations resulting in local chains of transmission, Singapore has been able to control the COVID-19 outbreak without major disruption to daily living. In this article, we describe the combination of measures taken by Singapore to contain COVID-19 and share some early lessons learnt from the experience.

A single mass gathering resulted in massive transmission of COVID-19 infections in Malaysia with further international spread
Nor Fazila Che Mat, PhD, Hisham Atan Edinur, PhD, Mohammad Khairul Azhar Abdul Razab, PhD, Sabreena Safuan, PhD
Journal of Travel Medicine, Volume 27, Issue 3, April 2020, taaa059,
https://doi.org/10.1093/jtm/taaa059
Malaysia has recorded the highest number of COVID-19 cases in Southeast Asia with more than 35% of new COVID-19 cases linked to the Sri Petaling gathering, a Moslem missionary movement attended by more than 19,000 people of different nationalities, in March 2020 in Kuala Lumpur. From this cluster, 1,701 samples have been tested positive out of 21,920 tests carried out. Thus, mass gathering during COVID-19 pandemic period should be banned to curb disease transmission.

COVID-19 immunity passports and vaccination certificates: scientific, equitable, and legal challenges
Alexandra L Phelan
... When larger scale international travel recommences, countries might require travellers to provide evidence of immunity as a condition of entry. Under the International Health Regulations (2005) (IHR), states can implement health measures that “achieve the same or greater level of health protection than WHO recommendations”; however, such measures must have a health rationale, be non-discriminatory, consider the human rights of travellers, and not be more restrictive of international traffic than reasonably available alternatives. Given current uncertainties about the accuracy and interpretation of individual serology testing, immunity passports are unlikely to satisfy this health rationale evidentiary burden and are inconsistent with the WHO recommendations against interference with international travel that were issued when the WHO Director-General declared COVID-19 a Public Health Emergency of International Concern (PHEIC). Given the discriminatory impact of immunity passports, any changes to WHO's recommendations should be considered in the context of the IHR's human rights protections.

Immunity passports have been compared to international certificates of vaccination, such as the “Carte Jaune” for yellow fever. However, there are significant differences between the two types of documents, occasioning fundamentally different burdens on individuals' health risk and bodily integrity, the public health risk, and an individual's capacity to consent and control. The main distinction between the two is the nature of the incentive. Vaccination certificates incentivise individuals to obtain vaccination against the virus, which is a social good. By contrast, immunity passports incentivise infection. Under the IHR, states can require travellers to provide vaccination certificates, but this is limited to specific diseases expressly listed in Annex 7, which currently only includes yellow fever, and if included in WHO recommendations, such as those issued following the declaration of a PHEIC as is the case for polio. Once, and if, a vaccine is developed, COVID-19 vaccination certificates could be included in revised WHO recommendations for the COVID-19 PHEIC, while member states could consider requesting standing recommendations or revising the IHR's Annex 7 for the longer term...

Tackle coronavirus in vulnerable communities
The pandemic has hit care homes, prisons and low-income communities hardest. Researchers are ready to help, but need data to be collected and shared.

Cover: Ancient jewellery
The cover shows jewellery that dates to between 46,000 and 43,000 years ago. Made from cave bear teeth, these pendants were unearthed during excavations at Bacho Kiro Cave in Bulgaria. In this week’s issue, Jean-Jacques Hublin and his colleagues discuss the artefacts and the human bone fragments that they uncovered in the cave. The finds, which include a human tooth, represent the earliest modern human remains to be found in Europe and, through the jewellery design, provide further evidence of cultural interactions between Homo sapiens spreading west through the continent and local Neanderthals. The authors’ DNA analysis and radiocarbon dating of the human remains suggest that modern humans arrived in the mid-latitudes of Europe before 45,000 years ago.
Initial Upper Palaeolithic Homo sapiens from Bacho Kiro Cave, Bulgaria

Direct dates for human remains found in association with Initial Upper Palaeolithic artefacts at Bacho Kiro Cave (Bulgaria) demonstrate the presence of Homo sapiens in the mid-latitudes of Europe before 45 thousand years ago.

Abstract
To update the landscape analysis of vaccine injuries no-fault compensation programmes, we conducted a scoping review and a survey of World Health Organization Member States. We describe the characteristics of existing no-fault compensation systems during 2018 based on six common programme elements. No-fault compensation systems for vaccine injuries have been developed in a
few high-income countries for more than 50 years. Twenty-five jurisdictions were identified with no-fault compensation programmes, of which two were recently implemented in a low- and a lower-middle-income country. The no-fault compensation programmes in most jurisdictions are implemented at the central or federal government level and are government funded. Eligibility criteria for vaccine injury compensation vary considerably across the evaluated programmes. Notably, most programmes cover injuries arising from vaccines that are registered in the country and are recommended by authorities for routine use in children, pregnant women, adults (e.g. influenza vaccines) and for special indications. A claim process is initiated once the injured party or their legal representative files for compensation with a special administrative body in most programmes. All no-fault compensation programmes reviewed require standard of proof showing a causal association between vaccination and injury. Once a final decision has been reached, claimants are compensated with either: lump-sums; amounts calculated based on medical care costs and expenses, loss of earnings or earning capacity; or monetary compensation calculated based on pain and suffering, emotional distress, permanent impairment or loss of function; or combination of those. In most jurisdictions, vaccine injury claimants have the right to seek damages either through civil litigation or from a compensation scheme but not both simultaneously. Data from this report provide an empirical basis on which global guidance for implementing such schemes could be developed.

NIH funding and the pursuit of edge science
Mikko Packalen and Jay Bhattacharya
Significance
Innovative research is critical to the advancement of biomedicine. The NIH plays a crucial role in fostering innovation. An empirical assessment of the success of the NIH in this role is an essential step in identifying ways to encourage novel research. This research introduces a measure of the age of the ideas used in published biomedical research papers and comprehensively evaluates the performance of NIH-supported research relative to non-NIH-supported research, using this measure.
Abstract
The National Institutes of Health (NIH) plays a critical role in funding scientific endeavors in biomedicine. Funding innovative science is an essential element of the NIH’s mission, but many have questioned the NIH’s ability to fulfill this aim. Based on an analysis of a comprehensive corpus of published biomedical research articles, we measure whether the NIH succeeds in funding work with novel ideas, which we term edge science. We find that edge science is more often NIH funded than less novel science, but with a delay. Papers that build on very recent ideas are NIH funded less often than are papers that build on ideas that have had a chance to mature for at least 7 y. We have three further findings. First, the tendency to fund edge science is mostly limited to basic science. Papers that build on novel clinical ideas are not more often NIH funded than are papers that build on well-established clinical knowledge. Second, novel papers tend to be NIH funded more often because there are more NIH-funded papers in innovative areas of investigation, rather than because the NIH funds innovative papers within research areas. Third, the NIH’s tendency to have funded papers that build on the most recent advances has declined over time. In this regard, NIH funding has become more conservative despite initiatives to increase funding for innovative projects. Given our focus on published
papers, the results reflect both the funding preferences of the NIH and the composition of the applications it receives.

**Cognitive and brain development is independently influenced by socioeconomic status and polygenic scores for educational attainment**

**Significance**
The influence of socioeconomic status (SES) inequalities on brain and cognitive development is a hotly debated topic. However, previous studies have not considered that genetic factors overlap with SES. Here we show that SES and EduYears-PGS (a score from thousands of genetic markers for educational attainment) have independent associations with both cognition and global cortical surface area in adolescents. EduYears-PGS also had a localized association in the brain: the intraparietal sulcus, a region related to nonverbal intelligence. In contrast, SES had global, but not regional, associations, and these persisted throughout adolescence. This suggests that the influence of SES inequalities is widespread—a result that opposes the current paradigm and can help inform policies in education.

High social value is fundamental to justifying these studies

Summary

Development of an effective vaccine is the clearest path to controlling the coronavirus disease 2019 (COVID-19) pandemic. To accelerate vaccine development, some researchers are pursuing, and thousands of people have expressed interest in participating in, controlled human infection studies (CHIs) with severe acute respiratory syndrome–coronavirus 2 (SARS-CoV-2) (1, 2). In CHIs, a small number of participants are deliberately exposed to a pathogen to study infection and gather preliminary efficacy data on experimental vaccines or treatments. We have been developing a comprehensive, state-of-the-art ethical framework for CHIs that emphasizes their social value as fundamental to justifying these studies. The ethics of CHIs in general are underexplored (3, 4), and ethical examinations of SARS-CoV-2 CHIs have largely focused on whether the risks are acceptable and participants could give valid informed consent (1). The high social value of such CHIs has generally been assumed. Based on our framework, we agree on the ethical conditions for conducting SARS-CoV-2 CHIs (see the table). We differ on whether the social value of such CHIs is sufficient to justify the
risks at present, given uncertainty about both in a rapidly evolving situation; yet we see none of our disagreements as insurmountable. We provide ethical guidance for research sponsors, communities, participants, and the essential independent reviewers considering SARS-CoV-2 CHIs.

Science 22 May 2020

**Social animals need connection**

Much research over the past decade or so has revealed that health and lifespan in humans, highly social animals, are reduced with social adversity. We humans are not the only animals that are social, however, and similar research has shown that other social mammals are similarly influenced by isolation and adversity. Snyder-Mackler et al. reviewed the relationships between social environment and many aspects of health and well-being across nonhuman mammals and investigated the similarities between these and patterns in humans. They found many of the same threats and responses across social mammals.

**Abstract**

The social environment, both in early life and adulthood, is one of the strongest predictors of morbidity and mortality risk in humans. Evidence from long-term studies of other social mammals indicates that this relationship is similar across many species. In addition, experimental studies show that social interactions can causally alter animal physiology, disease risk, and life span itself. These findings highlight the importance of the social environment to health and mortality as well as Darwinian fitness—outcomes of interest to social scientists and biologists alike. They thus emphasize the utility of cross-species analysis for understanding the predictors of, and mechanisms underlying, social gradients in health.

**Long-term thermal sensitivity of Earth’s tropical forests**

By Martin J. P. Sullivan,

**Thermal sensitivity of tropical trees**

A key uncertainty in climate change models is the thermal sensitivity of tropical forests and how this value might influence carbon fluxes. Sullivan et al. measured carbon stocks and fluxes in permanent forest plots distributed globally. This synthesis of plot networks across climatic and biogeographic gradients shows that forest thermal sensitivity is dominated by high daytime temperatures. This extreme condition depresses growth rates and shortens the time that carbon resides in the ecosystem by killing trees under hot, dry conditions. The effect of temperature is worse above 32°C, and a greater magnitude of climate change thus risks greater loss of tropical forest carbon stocks. Nevertheless, forest carbon stocks are likely to remain higher under moderate climate change if they are protected from direct impacts such as clearance, logging, or fires.

**Abstract**

The sensitivity of tropical forest carbon to climate is a key uncertainty in predicting global climate change. Although short-term drying and warming are known to affect forests, it is unknown if such effects translate into long-term responses. Here, we analyze 590 permanent plots measured across the tropics to derive the equilibrium climate controls on forest carbon. Maximum temperature is the most important predictor of aboveground biomass (−9.1 megagrams of carbon per hectare per degree Celsius), primarily by reducing woody productivity, and has a greater impact per °C in the hottest
forests (>32.2°C). Our results nevertheless reveal greater thermal resilience than observations of short-term variation imply. To realize the long-term climate adaptation potential of tropical forests requires both protecting them and stabilizing Earth’s climate.

Torture Journal
2019 Volume 29 - No.3
https://irct.org/publications/torture-journal/143
   This issue of the Torture Journal takes its focus on measuring torture rehabilitation processes and results. Scientific contributions on this subject include a measurement of rehabilitation outcomes with an instrument designed at the Marjorie Kovler Center in Chicago; a validation study examining diagnoses of Post-Traumatic Stress Disorder (PTSD) and Complex Post-Traumatic Stress Disorder (CPTSD) in refugee and torture survivor populations; and a study of gender-based violence in Honduras, El Salvador and Guatemala.
The issue also comprises an applied perspective on organizational development in torture rehabilitation programs and two letters to the editor addressing involvement of medical personnel in torture in Syria and a response to the concept of psychological torture.

Finally, Secretary-General of the International Rehabilitation Council for Torture Victims, Lisa Henry, and Chief Executive Officer of STARTTS Centre in Australia, Jorge Aroche, provide an open letter to the Torture Journal readers and a celebratory text of STARTTS' 30th anniversary respectively.

**Systematic review of interventions for reducing stigma experienced by children with disabilities and their families in low- and middle-income countries: state of the evidence**
Tracey Smythe, Jaimie D Adelson, Sarah Polack
Pages: 508–524
First Published: 07 March 2020

*Results*
Twenty studies were included. The majority (65%) of interventions targeted enacted stigma (negative attitudes) and the most common intervention approach was education/training (63%). Over half (54%) of interventions were delivered at the organisational/institutional level, and only four studies targeted more than one social level. The most common disability targeted was epilepsy (50%) followed by intellectual impairment (20%). The majority of studies (n = 18/20, 90%) found a reduction in a component of stigma; however, most (90%) studies had a high risk of bias.

*Conclusions*
This review highlights the lack of quality evidence on effective stigma-reduction strategies for children with disabilities. Validation and consistent use of contextually relevant scales to measure stigma may
advance this field of research. Studies that involve people with disabilities in the design and implementation of these strategies are needed.
