The Sentinel
Human Rights Action :: Humanitarian Response :: Health :: Education :: Heritage Stewardship :: Sustainable Development

Period ending 9 May 2020 :: Number 312

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortia and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel’s geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is a service of the GE2P2 Global Foundation, which is solely responsible for its content. Comments and suggestions should be directed to:
David R. Curry

Heritage Stewardship

101 people arrested and 19,000 artefacts recovered in international crackdown on cultural goods trafficking
06 May 2020
More than 19,000 archaeological artefacts and other artworks have been recovered as part of a global operation spanning 103 countries and focusing on the dismantlement of international networks of art and antiquities traffickers.

101 suspects have been arrested, and 300 investigations opened as part of this coordinated crackdown. The criminal networks handled archaeological goods and artwork looted from war-stricken countries, as well as works stolen from museums and archaeological sites.

Seizures include coins from different periods, archaeological objects, ceramics, historical weapons, paintings and fossils. Facilitating objects, such as metal detectors were also seized.

These results were achieved during the global Operation ATHENA II, led by the World Customs Organization (WCO) and INTERPOL, which was carried out in synchronization with the Europe-focused Operation PANDORA IV coordinated by the Spanish Civil Guard (Guardia Civil) and Europol. Details of both Operations, which ran in the autumn of 2019, can only be released now due to operational reasons...

Operational highlights
:: Afghan Customs seized 971 cultural objects at Kabul airport just as the objects were about to depart for Istanbul, Turkey.
:: The Spanish National Police (Policia Nacional), working together with the Colombian Police (Policia Nacional de Colombia), recovered at Barajas airport in Madrid some very rare pre-Columbian objects illegally acquired through looting in Colombia, including a unique Tumaco gold mask and several gold figurines and items of ancient jewellery. Three traffickers were arrested in Spain, and the Colombian authorities carried out house searches in Bogota, resulting in the seizure of a further 242 pre-Columbian objects, the largest ever seizure in the country’s history.
:: The investigation of a single case of online sale led to the seizure of 2,500 ancient coins by the Argentinian Federal Police Force (Policia Federal Argentina), the largest seizure for this category of items, while the second largest seizure was made by Latvian State Police (Latvijas Valsts Policija) for a total of 1,375 coins.
:: Six European Police forces reported the seizure of a hundred and eight metal detectors, demonstrating that looting in Europe is still an ongoing business...

**Healthcare Policies for Stateless Populations in ASEAN Countries: A Scoping Review**
Proloy Barua, Mukdarut Bangpan

**Abstract**
This study aimed at summarizing the existing health policies for stateless populations living in the 10 ASEAN countries: Brunei, Cambodia, Lao PDR, Indonesia, Malaysia, Myanmar, the Philippines, Singapore, Thailand, and Vietnam. We followed scoping review method recommended by Arksey and O'Malley. Our inclusion criteria were based on three concepts: populations (stateless and undocumented people), issues (healthcare policies and regulations), and settings (10 ASEAN countries). Our findings suggest that none of the ASEAN countries have explicit healthcare policies for stateless people except Thailand. We also observed that ratification of international human rights treaties relating to the right to health does not necessarily translate into the provision of healthcare policies for stateless population. Although Thailand seems like the only country among 10 ASIAN countries having health policies for stateless populations in the country, the question remains whether having a policy would lead to a proper implementation by ensuring right to health.

**The potential of emergent disruptive technologies for humanitarian supply chains: The integration of Blockchain, Artificial Intelligence and 3D Printing**
O Rodríguez-Espíndola, S Chowdhury, A Beltagui...

**Abstract**
The growing importance of humanitarian operations has created an imperative to overcome the complications currently recorded in the field. Challenges such as delays, congestion, poor communication and lack of accountability may represent opportunities to test the reported advantages of emergent disruptive technologies. Meanwhile, the literature on humanitarian supply chains looks at isolated applications of technology and lacks a framework for understanding challenges and solutions, a gap that this article aims to fill. Using a case study based on the flood of Tabasco of 2007 in Mexico, this research identifies solutions based on the use of emergent disruptive technologies. Furthermore, this article argues that the integration of different technologies is essential to deliver real benefits to the humanitarian supply chain. As a result, it proposes a framework to improve the flow of information, products and financial resources in humanitarian supply chains integrating three emergent disruptive technologies; Artificial Intelligence, Blockchain and 3D Printing. The analysis presented shows the potential of the framework to reduce congestion in the supply chain, enhance simultaneous collaboration of different stakeholders, decrease lead times, increase transparency, traceability and
accountability of material and financial resources, and allow victims to get involved in the fulfilment of
their own needs.

Internal Displacement :: Children

Lost at home :: The risks and challenges for internally displaced children and the urgent
actions needed to protect them
UNICEF
May 2020 :: 36 pages
Core report team (in alphabetical order): Jan Beise, Claus Hansen, Laura Healy, Sinae Lee, Naomi
Lindt, Yukun Pei, Danzhen You
PDF: https://data.unicef.org/wp-content/uploads/2020/05/Lost-at-home-risks-and-challenges-for-IDP-
[Excerpt from opening essay; text bolding from original]

Today, more children than ever before are displaced within their own countries. Their
harrowing stories of displacement are unfolding every day, and with increasing frequency. At the end
of 2019, approximately 45.7 million people were internally displaced by conflict and
violence (Fig. 1.1). Nearly half – 19 million – were estimated to be children. And millions more are
displaced every year by natural disasters.1

Annually, the number of internally displaced persons regularly outpaces that of refugees,
in many recent years at more than twice the total. And while most of those internally displaced do not
end up crossing international borders, many will become refugees and vulnerable migrants.2 Internally
displaced persons really are the invisible majority of the world’s displaced population.3

Looking ahead, climate-related resource scarcity and conflicts will likely continue to
trigger massive – and extensive – displacement. The World Bank estimates there could be more
than 140 million people internally displaced by climate by 2050. That’s 100 times the scale of Europe’s
refugee and migrant crisis in 2015–2016.4

In many countries around the world, internally displaced children persistently lack access
to basic services. This effectively limits or denies them the right to education, health, protection and
non-discrimination. These deprivations can be particularly acute in the life of a child. Removed from a
stable, secure home and the communities they need to thrive – family, friends, classmates and
teachers – internally displaced children are exposed to a host of harms and dangers. Family separation,
negative coping strategies such as child labour and child marriage, and violence, exploitation, abuse
and traffickig pose direct threats to their lives and futures. Internally displaced persons can be
displaced multiple times or live in protracted displacement, their needs and vulnerabilities
changing during the process.5 Some become caught up in cyclical displacement, which can mean
finding durable solutions is even more difficult.6

Despite its global scale, internal displacement is largely overshadowed by the current
political and public focus on refugees and migrants. Two United Nations (UN) agreements, the
Global Compact for Migration and the Global Compact on Refugees,7 set objectives aligned with the
commitment to leave no one behind captured in the 2030 Agenda for Sustainable Development. Yet despite the fact that the first step for many refugees and migrants in displacement is within their own borders, neither compact explicitly addresses the concerns of internally displaced people. Internal displacement requires global action. In response to a UN General Assembly Resolution on Protection and Assistance to Internally Displaced Persons, a three-year GP20 Plan of Action was launched to strengthen collaboration in addressing the challenges of internal displacement. The establishment of the High-Level Panel on Internal Displacement in late 2019 aims to bring about concrete and long-term solutions to these challenges.

Press Release

**19 million children internally displaced by conflict and violence in 2019, highest number ever**

Internally displaced children among the world’s most vulnerable to COVID-19

NEW YORK, 5 May 2020 – An estimated 19 million children, more than ever before, were living in displacement within their own countries due to conflict and violence in 2019 – some of them for years, UNICEF said in a new report today.

The report, ‘Lost at Home’, looks at the risks and challenges internally displaced children face, and the urgent actions needed to protect them. As COVID-19 continues to spread around the world, these children are among the most vulnerable to its direct and indirect impacts.

“Millions of displaced children around the world are already going without proper care and protection,” said UNICEF Executive Director Henrietta Fore. “When new crises emerge, like the COVID-19 pandemic, these children are especially vulnerable. It is essential that governments and humanitarian partners work together to keep them safe, healthy, learning and protected.”

Internally displaced children lack access to basic services and are at risk of exposure to violence, exploitation, abuse and trafficking, the report says. They are also at risk of child labour, child marriage and family separation which all pose direct threats to their health and safety.

The COVID-19 pandemic is making a critical situation for displaced children and families even worse. They often live in overcrowded camps or informal settlements, where access to basic hygiene and health services is limited, and where physical distancing is not possible. These conditions are highly conducive to the spread of diseases like COVID-19.

According to the report, there were 12 million new displacements of children in 2019, 3.8 million of them were caused by conflict and violence, and 8.2 million by disasters linked mostly to weather-related events like flooding and storms.

Through the report, UNICEF calls for strategic investments and a united effort from governments, civil society, private sector, humanitarian actors and children themselves to address the child-specific drivers of displacement, especially all forms of violence, exploitation and abuse.

UNICEF also calls on governments convening under the High-Level Panel on Internal Displacement, established by United Nations Secretary-General António Guterres, to take concrete action and investment that will help provide protection and equitable access to services for all internally displaced children and their families.
Critical to delivering on this agenda is better, timely and accessible data and evidence, disaggregated by age and gender, to improve collective understanding of how internal displacement affects children and their families. Internally displaced children and youth themselves must have a seat at the table, be taken seriously and offered the opportunity to be part of the solution, the report says.

COVID-19 – Child Protection

**COVID-19: Urgent need for child protection services to mitigate the risk of child sexual abuse and exploitation worldwide**

6 May 2020

Geneva (6 May 2020) – A UN human rights expert today warned that a reported surge in violence against children and new forms of sexual exploitation and abuse of them during COVID-19 lockdowns will have lifelong implications for millions worldwide.

Mama Fatima Singhateh, the Special Rapporteur on the sale and sexual exploitation of children, said between 42 million and 66 million children worldwide are already in a precarious socio-economic situation, even before the hidden impact of the COVID-19 crisis emerges.

“The damage to millions of children will be devastating if we are slow in mobilising child protection services for early detection and prevention,” Singhateh said.

“A comprehensive mapping and rapid and responsive child protection measures are paramount to assess the magnitude of this crisis on the most vulnerable children, including those who are refugees, displaced, homeless, migrants, minorities, slum-dwellers, living with disabilities, living on the streets, living in refugee settlements, and in institutions,” she said.

The independent expert said COVID-19 travel restrictions had spawned new forms of child sexual exploitation and abuse, including attempts to establish a “delivery” or “drive-thru” service for sexual exploitation of children.

“There has also been a spike in the number of attempts to access illegal websites featuring child sexual abuse material. Producing and accessing child sexual abuse material and live-stream child sexual abuse online has now become an easy alternative to groom and lure children into sexual activities and to trade images in online communities,” Singhateh said.

The COVID-19 pandemic will leave those already left behind trailing even further behind. “Our commitments made under Sustainable Development Goals (SDGs) to leave no one behind is now more relevant than ever.”

Social benefits and social protection nets should prioritise low-income and vulnerable communities and families to alleviate COVID-19 collateral damage on children, the expert said.
Commemorating Smallpox Eradication – a legacy of hope, for COVID-19 and other diseases

8 May 2020  News release
On 8 May 1980, the 33rd World Health Assembly officially declared: ‘The world and all its peoples have won freedom from smallpox.’

The declaration marked the end of a disease that had plagued humanity for at least 3,000 years, killing 300 million people in the 20th century alone.

It was ended, thanks to a 10-year global effort, spearheaded by the World Health Organization, that involved thousands of health workers around the world to administer half a billion vaccinations to stamp out smallpox.

The US$ 300m price-tag to eradicate smallpox saves the world well over US$ 1 billion every year since 1980.

Speaking at a virtual event hosted at WHO-HQ, involving key players in the eradication effort, WHO Director-General, Dr Tedros Adhanom Ghebreyesus said, “As the world confronts the COVID-19 pandemic, humanity’s victory over smallpox is a reminder of what is possible when nations come together to fight a common health threat.”

...At the event, Dr Tedros unveiled a commemorative postal stamp to recognize the global solidarity that drove the initiative and honour the efforts of health workers who ensured its success.

The stamp, developed by the United Nations Postal Administration (UNPA), in collaboration with WHO, signifies what national unity and global solidarity can achieve. Numerous countries, such as Guinea, India, Nigeria, Philippines, Togo and others issued smallpox stamps to show support for, and raise awareness about WHO’s Intensified Smallpox Eradication Programme launched in 1967.

...Following smallpox eradication, WHO and UNICEF launched the Expanded Programme on Immunization, under which 85% of the world’s children are vaccinated and protected from debilitating diseases.

With the potential of a COVID-19 vaccine ahead, ensuring sufficient supplies and reaching people in hard to reach places is a high priority. Addressing vaccine hesitancy poses a significant challenge to stop the virus. Access to accurate public health information and education is critical to ensure that the public has the facts to keep themselves and others safe.
To permanently commemorate the eradication of smallpox and the lessons learned on a global scale, rather than every 10-years, WHO is calling museums, exhibition companies, designers, curators and associations to develop an immersive, interactive and educational exhibition on smallpox and its relevance for COVID-19 and global health security. The exhibition, which will be unveiled later this year, will promote a better understanding of public health and empower people to keep informed and safe during a pandemic.

COVID-19 – UN Appeal

UN issues US$6.7 billion appeal to protect millions of lives and stem the spread of coronavirus in fragile countries
07 May 2020
The UN’s Humanitarian Chief, Mark Lowcock, has called for swift and determined action to avoid the most destabilizing effects of the COVID-19 pandemic as he releases a US$6.7 billion appeal and an updated global plan to fight coronavirus in fragile countries.

COVID-19 has now reached every country, with nearly 3,596,000 confirmed cases and over 247,650 deaths worldwide. The peak of the disease in the world’s poorest countries is not expected until some point over the next three to six months. However, there is already evidence of incomes plummeting and jobs disappearing, food supplies falling and prices soaring, and children missing vaccinations and meals.

The humanitarian system is taking action to avert a sharp rise in conflict, hunger, poverty and disease as a result of the pandemic and the associated global recession. Today’s updated Global Humanitarian Response Plan has been expanded in response. It includes nine additional vulnerable countries: Benin, Djibouti, Liberia, Mozambique, Pakistan, the Philippines, Sierra Leone, Togo and Zimbabwe, and programmes to respond to the growth in food insecurity.

Today’s new appeal and updated humanitarian response plan were released at a virtual event hosted by Mark Lowcock, alongside the Executive Director of WHO Health Emergencies, Mike Ryan; the President and CEO of Oxfam America, Abby Maxman; the UN High Commissioner for Refugees, Filippo Grandi; and the Executive Director of WFP, David Beasley. The plan was first launched by the UN Secretary-General in March.

UN Under-Secretary-General for Humanitarian Affairs Mark Lowcock said: “The COVID-19 pandemic is hurting us all. But the most devastating and destabilizing effects will be felt in the world’s poorest countries. In the poorest countries we can already see economies contracting as export earnings, remittances and tourism disappear. Unless we take action now, we should be prepared for a significant rise in conflict, hunger and poverty. The spectre of multiple famines looms.

"If we do not support the poorest people – especially women and girls and other vulnerable groups – as they battle the pandemic and impacts of the global recession, we will all be dealing with the spillover effects for many years to come. That would prove even more painful, and much more expensive, for everyone.
“This pandemic is unlike anything we have dealt with in our lifetime. Business as usual will not do. Extraordinary measures are needed. As we come together to combat this virus, I urge donors to act in both solidarity and in self-interest and make their response proportionate to the scale of the problem we face.”

The COVID-19 Global Humanitarian Response Plan is the international community’s primary fundraising vehicle to respond to the humanitarian impacts of the virus in low- and middle- income countries and support their efforts to fight it. The plan brings together appeals from WHO and other UN humanitarian agencies. Non-governmental organizations (NGOs) and NGO consortia have been instrumental in helping shape the plan. They are key partners in delivering it and can access funding through it.

The plan provides help and protection that prioritize the most vulnerable. This includes older people, people with disabilities, and women and girls, given pandemics heighten existing levels of discrimination, inequality and gender-based violence. The plan includes programmes that respond to the growth in food insecurity.

Dr. Tedros Adhanom Ghebreyesus, Director-General of WHO, said: “The caseload in most countries in the Global Humanitarian Response Plan may seem small, but we know that the surveillance, laboratory testing and health systems’ capacity in these countries are weak. It is therefore likely that there is undetected community transmission happening. At the same time, confinement and other measures are having a major impact on essential health services. It’s extremely important to maintain these services, from vaccination to sexual and reproductive health, WASH and mental health.”

...Since the plan was first launched on 25 March, US$1 billion in generous donor funding has been raised. This includes US$166 million from OCHA’s pooled funds to support efforts across 37 countries, with US$95 million from the UN Central Emergency Response Fund and US$71 million from 12 Country-based Pooled Funds.

This has enabled:
- The installation of handwashing facilities in vulnerable places like refugee camps; and the distribution of gloves, surgical masks, N95 respirators, gowns and goggles, and testing kits to help vulnerable countries respond to the pandemic.
- The creation of new transport hubs from which supplies can be transported by air.
- More than 1.7 million people around the world, including health workers, to be trained in virus identification and protection measures through WHO’s online COVID-19 training portal.

Everything achieved so far has only been possible because of the generous funding from donors. It can only continue if additional funding is made available that is proportionate to the scale of the problem we face.

Analysis by the UN’s Office for the Coordination of Humanitarian Affairs shows that the cost of protecting the most vulnerable 10 per cent of people in the world from the worst impacts is approximately US$90 billion. This is equivalent to 1 per cent of the current global stimulus package put in place by OECD and G20 countries.
It calculates that two thirds of those costs could be met by the World Bank and the International Monetary Fund if they are supported to change the terms on which they help the most vulnerable countries. The remainder will need to come from increased official development assistance over the next 12 months.

Prison Conditions: The Americas

COVID-19: Americas / prison conditions
UN High Commissioner for Human Rights
Rupert Colville, Spokesperson
Geneva, 5 May 2020
[Editor's text bolding]
Conditions in many prisons in the Americas region are deeply worrying. Pre-existing structural problems, such as chronic overcrowding and unhygienic conditions, coupled with the lack of proper access to healthcare have enabled the rapid spread of COVID-19 in many facilities.

Thousands of inmates and prison officials have already been infected across North and South America. In many countries, the increasing fear of contagion and lack of basic services -- such as the regular provision of food due to the prohibition of family visits -- have triggered protests and riots.

Some of these incidents in detention centres have turned extremely violent. The latest happened on 1 May, in Los Llanos penitentiary in Venezuela, where a revolt by prisoners reportedly resulted in 47 inmates losing their lives. Four days earlier, on 27 April, a riot broke out in the Miguel Castro Castro prison in Peru leaving nine inmates dead. On 21 March, 23 inmates died after security forces intervened to supress rioting in La Modelo prison in Colombia. Other incidents, including attempts to escape, have been registered in detention centres in Argentina, Brazil and Colombia, Mexico and the U.S.

The scale and gravity of the incidents mentioned above seem to indicate that in some cases states have not taken appropriate measures to prevent violence in detention facilities, and that state agents may have committed use of force violations in attempts to re-gain control of these facilities. We remind authorities that the use of force must strictly comply with the principles of legality, necessity, proportionality and non-discrimination, and that States have the duty to protect inmates’ physical and mental health and well-being, as set out in the UN Standard Minimum Rules for the Treatment of Prisoners (also known as the Nelson Mandela Rules).

We call on States to conduct thorough, prompt, independent and impartial investigations into the circumstances of the deaths and injuries during riots, including any allegation of use of force violations by state agents.

We have also seen with concern how some States have routinely detained people for allegedly violating mandatory quarantines, thereby increasing the risk of infection.
In El Salvador, extremely harsh security measures were recently imposed in prisons, which could amount to cruel, inhuman or degrading treatment, and could also exacerbate the already precarious hygiene conditions.

We call on States to take appropriate measures to prevent further spread of the virus by ensuring sanitary conditions, widespread access to testing and access to necessary healthcare for detainees, as well as personal protective equipment and testing for prison personnel. Authorities should guarantee a minimum level of personal contacts with family members and proper access to food and drinkable water, as well as providing regular and transparent information about the impact of the disease on prisoners and staff. Conditions in detention centres and prisons, and the treatment of detainees should be regularly monitored by independent bodies, and prisoners who fall ill should be placed in non-punitive isolation or quarantine in facilities where they can receive appropriate medical care.

We welcome measures taken by some States to release those most vulnerable to COVID-19, including people with underlying medical conditions, pregnant women, older people, people living with HIV, as well as people with disabilities. However, broader measures are needed to reduce the extreme levels of overcrowding by releasing other categories of prisoners serving short sentences for non-violent crimes, as well as children held in detention and people detained for immigration offences.

In doing so, it is essential that States ensure that those measures do not contribute to impunity for violent crimes. People convicted of crimes recognised under international law after a fair and public trial by an independent and impartial tribunal should be considered for temporary release from custody only under exceptional circumstances.

In the context of the pandemic, it is urgent to reduce the use of pre-trial detention – a measure that should always be exceptional, but has been chronically over-used in the Americas. The Inter-Agency Standing Committee Interim Guidance on COVID-19 and persons deprived of their liberty offers practical suggestions to States wishing to implement measures to reduce overcrowding in places of detention.

People detained arbitrarily, without sufficient legal basis, or for crimes that are incompatible with international law, as well as all those incarcerated for exercising their human rights, including expression of dissenting opinions, should also be released.

Authorities should ensure that people who have been released receive proper health care.

Over 30 European and Central Asia member states joined a successful virtual dialogue Wednesday 6 May on “Sharing Experiences and Strategies for COVID-19 Response, Transition, and Resilience.”

The COVID-19 pandemic is intensifying inequalities experienced by the world’s one billion people with disabilities, UN Secretary-General António Guterres said in launching a report issued on Wednesday that calls for a disability-inclusive recovery and response to the crisis.

Even under normal circumstances, people with disabilities are less likely to access education, healthcare and income opportunities, or to participate in their communities, according to Mr. Guterres. They are also more likely to live in poverty, and to suffer higher rates of violence, neglect and abuse. “The pandemic is intensifying these inequalities — and producing new threats,” he revealed...

The global economic downturn caused by the COVID-19 pandemic is shaping up to be the worst since the tragically consequential Great Depression. Countless comparisons have been made between the current economic situation and the global financial crisis of 2008. Although similar in terms of their impact, especially on employment and income, key differences make the current crisis particularly dangerous.

The global financial crisis began in 2008 with the bursting of the housing bubble in the United States accompanied by the subprime mortgage meltdown. The collapse of major banking institutions followed, along with a precipitous fall on stock markets across the world and a credit freeze. Bankruptcies increased, credit dried up and unemployment skyrocketed. This was the beginning of the Great Recession.

This time, soaring unemployment came first as many businesses were forced to shutter because of nationwide lockdowns in most developed economies. Rising unemployment and shrinking revenues are choking the demand for products and services, which will inevitably lead to sharp increases in bankruptcies and even more lay-offs...
As stated by the UNESCO International Bioethics Committee (IBC) and the UNESCO World Commission on the Ethics of Scientific Knowledge and Technology (COMEST), “a bioethics and ethics of science and technology perspective, rooted in human rights, should play a key role in the context of this challenging pandemic”. \[1\] In this context, UNESCO considers it is vital to provide solid grounds for collective reflections on some of the following ethical and social dimensions, pertaining both to the medical treatment, and to the prevention and containment policies put in place by various states...

OIC Orphan's Day: Al-Othaimeen Calls for Giving Orphans the Care they Deserve

Every year, the Muslim world celebrates the Orphan's Day on Ramadan 15th. However, the outbreak of the novel coronavirus disease (COVID-19) pandemic this year in various parts of the world would cast a shadow on this year's celebrations due to the strict precautionary measures taken by world countries to preserve the health and safety of their citizens. This necessitates a different approach to secure comprehensive care for orphans and buttress our efforts to protect and provide for them, especially in conflict and war-torn areas where their number is on the rise. In this context, the Secretary-General of the Organization of Islamic Cooperation (OIC), Dr. Yousef A. Al-Othaimeen, has called on all Member States, charitable and humanitarian organizations, and civil society institutions to accord the orphans the care and attention they deserve....

Balancing the COVID-19 Response with Wider Health Needs: Key Decision-Making Considerations for Low- and Middle-Income Countries
As the pandemic accelerates, governments must also protect other essential health services. Already, there have been numerous reports of disrupted access to services ranging from labor and delivery and immunization to HIV and tuberculosis care to dialysis and cancer treatment—most notably in countries with strict lockdowns. Initial estimates paint a grim picture of the potential magnitude of negative impacts on health outcomes due to these disruptions.

China's Overseas Lending: A Response to Our Critics
Over the past two decades, China has become a major global lender, with outstanding debt claims from direct loans and trade advances alone exceeding 1.5 percent of world GDP. This surge in lending has financed many projects in infrastructure, mining, and energy. The problem is that there is little official data beyond those aggregate numbers, mainly because China has not released a breakdown of its lending activities.

Leave No One Behind: Using a Benefit-Based Advance Market Commitment to Incentivise Development and Global Supply of COVID-19 Vaccines
The global effort to control the COVID-19 pandemic has seen an exceptional allocation of public and philanthropic funds to advance the development of diagnostics, therapeutics, and vaccines as quickly as possible. While critical, even these significant commitments represent only a “down payment” on a price tag that could eventually exceed $50 billion just to scale the production of vaccines to control this global pandemic—amounts that cannot be raised through traditional donor and philanthropic commitments.

Making the IMF’s Special Drawing Rights Work for COVID-19 Economic Relief

Many prominent people have advocated that the IMF undertake an “SDR allocation” to assist countries in dealing with the global financial crisis brought about by the COVID-19 pandemic. If IMF shareholders show some leadership and bureaucratic flexibility, there are ways to allay the American government’s concerns and quickly get liquidity in the hands of countries who desperately need it.

COVID-19 and Oxygen: Selecting Supply Options in LMICs that Balance Immediate Needs with Long-Term Cost-Effectiveness

Much of the policy debate regarding COVID-19 medical equipment focuses on the question of which form of patient respiratory support is effective in low-resources settings. However, irrespective of the specific form of respiratory support used, the long-term and cost-effective functioning of all forms of oxygen therapy requires an appropriate system to supply oxygen to hospitals.

Alternatives to the TCJA Limit on the State and Local Tax Deduction

In this report, we compare revenue equivalent alternatives to the $10,000 annual limit on the state and local tax (SALT) deduction enacted in the 2017 Tax Cuts and Jobs Act (TCJA). We consider options that would limit all itemized deductions, not just the SALT deduction, and an additional option that would raise the four highest federal individual income tax rates. Prior work has shown that higher-income households would benefit

Evaluating Connecticut’s Pension Benefits during the Pandemic

The coronavirus pandemic threatens the financial stability of Connecticut’s pension plan for state employees, one of the nation’s worst-funded retirement plans. This strain could lead to benefit cuts, but recent plan changes have already reduced future pensions and raised mandatory employee contributions. Many state employees hired today will receive only half as much from the retirement system as they would have collected under

How Would the President’s Proposed 2021 Budget Affect Spending on Children?

In this Kids’ Share brief, we examine how the Trump administration’s proposed 2021 budget would affect spending on children. Children’s programs subject to annual funding decisions, including education and early care and education, would be sharply reduced. Mandatory programs and tax credits for children for the most part would be largely protected, following a pattern seen throughout the budget.

Data Snapshot of Youth Incarceration in Connecticut: 2020 Update
Although Connecticut’s youth detention rates have declined significantly in the past decade, the state incarcerates an increasing proportion and disproportionate number of youth of color. In 2019, 84 percent of youth admitted to detention were youth of color, even though only about 33 percent of the state’s youth population were youth of color. In 2018, the governor closed the Connecticut Juvenile Training School (CJTS), the

How the COVID-19 Recession Could Affect Health Insurance Coverage
Thirty million workers filed initial unemployment claims between March 15 and April 25. As workers lose their jobs, many will also lose their employer-sponsored health insurance (ESI), as will their dependents. Some of these workers and dependents will qualify for Medicaid coverage, particularly in states that expanded Medicaid eligibility under the Affordable Care Act (ACA). Others will purchase individual coverage on the

Paid medical leave research: What we know and what we need to know to improve health and economic well-being in the United States
Paid medical leave is a benefit that allows individuals to take time off from their jobs while continuing to receive their wages and salaries to address their own serious medical condition that limits their ability to work. The term "medical leave" generally refers to leave that lasts weeks or months. Research suggests that paid medical leave could affect economic outcomes by reducing income volatility, helping workers to

Statement from the Bill & Melinda Gates Foundation about today’s Coronavirus Global Response Summit
SEATTLE, May 4, 2020 – Earlier today at the Coronavirus Global Response Summit, the Bill & Melinda Gates Foundation announced a commitment of $125 million towards the international collective effort to develop and equitably distribute COVID-19 diagnostics, therapies, and vaccines. This includes $50 million of new funding to Gavi, the Vaccine Alliance and $75 million of previously announced funding for therapeutics and diagnostics. More information about the summit is available at global-response.europa.eu.

**Non-inferiority designs comparing placebo to a proven therapy for childhood pneumonia in low-resource settings**

After a new treatment is recommended to be first-line treatment for a specific indication, outcome and population, it may be unethical to use placebo as a comparator in trials for that setting. Nevertheless, in specific circumstances, use of a placebo group might be warranted, for example, when it is believed that an active treatment may not be efficacious or cost-effective for a specific subpopulation. An example is antibiotic treatment for pneumonia, which may not be effective for many patients taking it due to the emergence of antibiotic-resistant strains or the high prevalence of viral and low prevalence of bacterial pneumonia.

The long journey towards standards for engineering biosystems: Are the Molecular Biology and the Biotech communities ready to standardise?

Jacob Beal et al

Standards are the basis of technology: they allow rigorous description and exact measurement of properties, reliable reproducibility and a common “language” that enables different communities to work together. Molecular biology was in part created by physicists; yet, the field did not inherit the
focus on the quantitation, the definition of system boundaries and the robust, unequivocal language that is characteristic of the other natural sciences. However, synthetic biology (SynBio) increasingly requires scientific, technical, operational and semantic standards for the field to become a full-fledged engineering discipline with a high level of accuracy in the design, manufacturing and performance of biological artefacts. Although the benefits of adopting standards are clear, the community is still largely reluctant to accept them, owing to concerns about adoption costs and losses in flexibility.

Cities and towns
Cities and towns are on the frontline of receiving and welcoming people who have been displaced. In this issue of FMR, policymakers, practitioners, researchers, representatives of cities and international city-focused alliances, and displaced people themselves debate the challenges facing both the urban authorities and their partners, and the people who come to live there. The issue also includes two ‘general’ articles on other topics.

Public Money Creation to Maintain Fundamental Human Rights during the COVID-19 Pandemic

Takondwa Chimowa, Stephen Hall, and Bernadette O’Hare

As governments around the world respond to the COVID-19 pandemic with a range of policies aimed at mitigating the economic fallout, we argue that low- and middle-income countries (LMICs) should prioritize public money creation over foreign borrowing. Experience shows that the cost of servicing foreign debt diverts resources from public services and can undermine fundamental economic, social and cultural rights, such as the rights to clean water, sanitation, basic education and health care. Moreover, the conditions attached to any subsequent debt restructuring can make matters worse.[1]...
A novel conceptual model and heuristic tool to strengthen understanding and capacities for health inequalities research

Despite increasing evidence on health inequalities over the past decades, further efforts to strengthen capacities to produce research on this topic are still urgently needed to inform effective interventions aiming to address these inequalities. To strengthen these research capacities, an initial comprehensive understanding of the health inequalities research production process is vital. However, most existing research and models are focused on understanding the relationship between health inequalities research and policy, with less focus on the health inequalities research production process itself.

Existing conceptual frameworks provide valuable, yet limited, advancements on this topic...

Responding to Ebola in the Democratic Republic of Congo

by Humanitarian Practice Network

This edition of Humanitarian Exchange, co-edited with Anne Harmer, focuses on the response to the Ebola outbreak in the Democratic Republic of Congo (DRC). Although at the time of publication the outbreak appeared to have ended, over its course it claimed 2,200 lives, with more than 3,300 infected, making this the world’s second largest outbreak ever.

In the lead article, Natalie Roberts reflects on the extent to which humanitarian actors have applied learning from the outbreak in West Africa in 2014–2016. Richard Kojan and colleagues report on the NGO ALIMA’s flexible, patient-centred approach to reducing mortality, Marcela Ascuntar reflects on lessons learned from community feedback and Bernard Balibuno, Emanuel Mbuna Badjonga and
Howard Mollett highlight the crucial role faith-based organisations have played in the response. In their article, Theresa Jones, Noé Kasali and Olivia Tulloch outline the work of the Bethesda counselling centre in Beni, which provides support to grieving families. Reflecting on findings from a recent assessment by Translators without Borders, Ellie Kemp describes the challenges involved in providing clear and accessible information on Ebola and the response, and Sung Joon Park and colleagues explain how humane care and treatment can help increase trust and confidence in the response. Stephen Mugamba and his co-authors highlight the importance of community involvement in Ebola research, and Gillian McKay and her co-authors examine the impact of the Ebola outbreak and response on sexual and reproductive health services.

Stacey Mearns, Kiryn Lanning and Michelle Gayer present an Ebola Readiness Roadmap to support NGOs in preparing for an outbreak, while Edward Kumakech, Maurice Sadlier, Aidan Sinnott and Dan Irvine report on a Gap Analysis tool looking at the communication, community engagement and compliance tracking activities that need to be in place before an Ebola vaccine is deployed. Emanuele Bruni and colleagues describe the development of a new monitoring and evaluation framework for strategic response planning. The edition ends with an article by Adelicia Fairbanks, who argues for an acceptance strategy in the DRC to improve security and access for responding agencies.

_Promoting Global Adolescent Health: Realizing the Transformative Potential of Schools_
Mathilda Regan, Wafaie W. Fawzi, Vikram Patel
p526–528
Published in issue: May 2020

Education is one of the most powerful predictors of health throughout the life course and is central to a successful transition to adulthood. Conversely, good health and well-being allow adolescents to fully participate in school, improving their chances of employment and lifelong economic gains. With rates of secondary school enrollment rising in most countries, schools provide transformative platforms to reduce inequities and promote the mutually reinforcing relationship between adolescent health and education. This commentary proposes that renewed impetus is needed for the promotion of schools not only as environments where healthy behaviors can be seeded but also as settings for effectively connecting with the health care system, the alleviation of economic barriers to school participation, and engagement between adolescents and the community. For this to happen, we need to integrate diverse, evidence-based interventions for concerted delivery to maximize impact with the greatest efficiency. We consider four types of interventions, which merit such convergence...

Review Paper

Healthcare Policies for Stateless Populations in ASEAN Countries: A Scoping Review
Proloy Barua, Mukdarut Bangpan

Abstract
This study aimed at summarizing the existing health policies for stateless populations living in the 10 ASEAN countries: Brunei, Cambodia, Lao PDR, Indonesia, Malaysia, Myanmar, the Philippines, Singapore, Thailand, and Vietnam. We followed scoping review method recommended by Arksey and O'Malley. Our inclusion criteria were based on three concepts: populations (stateless and undocumented people), issues (healthcare policies and regulations), and settings (10 ASEAN countries). Our findings suggest that none of the ASEAN countries have explicit healthcare policies for stateless people except Thailand. We also observed that ratification of international human rights treaties relating to the right to health does not necessarily translate into the provision of healthcare policies for stateless population. Although Thailand seems like the only country among 10 ASIAN countries having health policies for stateless populations in the country, the question remains whether having a policy would lead to a proper implementation by ensuring right to health.

Planning and provision of ECMO services for severe ARDS during the COVID-19 pandemic and other outbreaks of emerging infectious diseases
Kollengode Ramanathan, et al.

Summary
WHO interim guidelines recommend offering extracorporeal membrane oxygenation (ECMO) to eligible patients with acute respiratory distress syndrome (ARDS) related to coronavirus disease 2019 (COVID-19). The number of patients with COVID-19 infection who might develop severe ARDS that is refractory to maximal medical management and require this level of support is currently unknown. Available evidence from similar patient populations suggests that carefully selected patients with severe ARDS who do not benefit from conventional treatment might be successfully supported with venovenous ECMO. The need for ECMO is relatively low and its use is mostly restricted to specialised centres globally. Providing complex therapies such as ECMO during outbreaks of emerging infectious diseases has unique challenges. Careful planning, judicious resource allocation, and training of personnel to provide complex therapeutic interventions while adhering to strict infection control measures are all crucial components of an ECMO action plan. ECMO can be initiated in specialist centres, or patients can receive ECMO during transportation from a centre that is not specialised for this procedure to an expert ECMO centre. Ensuring that systems enable safe and coordinated movement of critically ill patients, staff, and equipment is important to improve ECMO access. ECMO preparedness for the COVID-19 pandemic is important in view of the high transmission rate of the virus and respiratory-

Childhood vaccines and antibiotic use in low- and middle-income countries
Joseph A. Lewnard, Nathan C. Lo[... ] & Ramanan Laxminarayan
Abstract
Vaccines may reduce the burden of antimicrobial resistance, in part by preventing infections for which treatment often includes the use of antibiotics1,2,3,4. However, the effects of vaccination on antibiotic consumption remain poorly understood—especially in low- and middle-income countries (LMICs), where the burden of antimicrobial resistance is greatest5. Here we show that vaccines that have recently been implemented in the World Health Organization’s Expanded Programme on Immunization
reduce antibiotic consumption substantially among children under five years of age in LMICs. By analysing data from large-scale studies of households, we estimate that pneumococcal conjugate vaccines and live attenuated rotavirus vaccines confer 19.7% (95% confidence interval, 3.4–43.4%) and 11.4% (4.0–18.6%) protection against antibiotic-treated episodes of acute respiratory infection and diarrhoea, respectively, in age groups that experience the greatest disease burden attributable to the vaccine-targeted pathogens. Under current coverage levels, pneumococcal and rotavirus vaccines prevent 23.8 million and 13.6 million episodes of antibiotic-treated illness, respectively, among children under five years of age in LMICs each year. Direct protection resulting from the achievement of universal coverage targets for these vaccines could prevent an additional 40.0 million episodes of antibiotic-treated illness. This evidence supports the prioritization of vaccines within the global strategy to combat antimicrobial resistance.

**Tracking genetic discrimination**  
The promise of personalized medicine lies in the tailored treatment of individual patients, a process requiring detailed phenotypic and genetic information. Although the widespread collection of such data can help to advance the implementation of precision healthcare, the genomic sequencing data being amassed also include private information that could potentially be used as a basis for genetic discrimination. It is important for the genetics community to be aware of these risks and to contribute to policies designed to monitor and mitigate threats to the equitable treatment of individuals or populations on the basis of genetics.

**Availability of Authorizations from EMA and FDA for Age-Appropriate Medicines Contained in the WHO Essential Medicines List for Children 2019**

by Jose-Manuel del Moral Sanchez, Isabel Gonzalez-Alvarez, Marta Gonzalez-Alvarez, Andres Navarro-Ruiz and Marival Bermejo

Pharmaceutics 2020, 12(4), 316; https://doi.org/10.3390/pharmaceutics12040316 - 01 Apr 2020

Abstract
Lack of age-appropriate commercially drug products availability is a common problem in pediatric therapeutics; this population needs improved and safer drug delivery. In addition, biopharmaceutic aspects, dosage requirements, and swallowing abilities demand pediatric forms different to adult formulations. The objective of this study was to evaluate the authorization availability from United States Food and Drug Administration (FDA) and European Medicines Agency (EMA) of oral essential medicines for children and analyze its age-appropriateness for oral administration in children. All oral drugs from 7th List of Essential Medicines for Children by World Health Organization (WHO) were selected. Availability of commercial drug products was collected from OrangeBook, Spanish drug product catalogue, British electronic Medicines Compendium, and the International Vademecum. Tablets, effervescent tablets, and capsules were considered as not age-appropriate forms. Liquid forms, powder for oral suspension, mini tablets, granules, and soluble films were considered as age-appropriate forms due to their flexibility. More than 80% of the studied drugs possess a commercial authorization in oral forms in both EMA and FDA. Nevertheless, around 50% of these formulations are not age-appropriate for most pediatric groups. This study shows the lack of age-appropriate medicines for children. More efforts are needed to improve development and approval of pediatric medicines.

Decisional autonomy undermines advisees’ judgments of experts in medicine and in life
Samantha Kassirer, Emma E. Levine, and Celia Gaertig

Significance
The debate over whether people ought to be guided paternalistically or given full decisional autonomy has been raging for centuries. However, in many Western societies, autonomy has become the gold standard. The US medical system, in particular, has increasingly prioritized patient autonomy. The present research examines the important question of how patients and advisees broadly react to full decisional autonomy. We find that advisees making difficult decisions prefer paternalism to autonomy, but doctors do not anticipate this preference. We document this preference within medicine and within a range of other contexts characterized by adviser–advisee asymmetries in expertise. Our results suggest that advisees facing difficult decisions do not perceive autonomy as the gold standard.

Abstract
Over the past several decades, the United States medical system has increasingly prioritized patient autonomy. Physicians routinely encourage patients to come to their own decisions about their medical care rather than providing patients with clearer yet more paternalistic advice. Although political theorists, bioethicists, and philosophers generally see this as a positive trend, the present research examines the important question of how patients and advisees in general react to full decisional autonomy when making difficult decisions under uncertainty. Across six experiments (N = 3,867), we find that advisers who give advisees decisional autonomy rather than offering paternalistic advice are judged to be less competent and less helpful. As a result, advisees are less likely to return to and recommend these advisers and pay them lower wages. Importantly, we also demonstrate that advisers do not anticipate these effects. We document these results both inside and outside the medical domain, suggesting that the preference for paternalism is not unique to medicine but rather is a
feature of situations in which there are adviser–advisee asymmetries in expertise. We find that the preference for paternalism holds when advice is solicited or unsolicited, when both paternalism and autonomy are accompanied by expert guidance, and it persists both before and after the outcomes of paternalistic advice are realized. Lastly, we see that the preference for paternalism only occurs when decision makers perceive their decision to be difficult. These results challenge the benefits of recently adopted practices in medical decision making that prioritize full decisional autonomy.

**Estimating the deep replicability of scientific findings using human and artificial intelligence**
Yang Yang, Wu Youyou, and Brian Uzzi

**Significance**
After years of urgent concern about the failure of scientific papers to replicate, an accurate, scalable method for identifying findings at risk has yet to arrive. We present a method that combines machine intelligence and human acumen for estimating a study's likelihood of replication. Our model—trained and tested on hundreds of manually replicated studies and out-of-sample datasets—is comparable to the best current methods, yet reduces the strain on researchers' resources. In practice, our model can complement prediction market and survey replication methods, prioritize studies for expensive manual replication tests, and furnish independent feedback to researchers prior to submitting a study for review.

**Abstract**
Replicability tests of scientific papers show that the majority of papers fail replication. Moreover, failed papers circulate through the literature as quickly as replicating papers. This dynamic weakens the literature, raises research costs, and demonstrates the need for new approaches for estimating a study's replicability. Here, we trained an artificial intelligence model to estimate a paper's replicability using ground truth data on studies that had passed or failed manual replication tests, and then tested the model's generalizability on an extensive set of out-of-sample studies. The model predicts replicability better than the base rate of reviewers and comparably as well as prediction markets, the best present-day method for predicting replicability. In out-of-sample tests on manually replicated papers from diverse disciplines and methods, the model had strong accuracy levels of 0.65 to 0.78. Exploring the reasons behind the model's predictions, we found no evidence for bias based on topics, journals, disciplines, base rates of failure, persuasion words, or novelty words like “remarkable” or “unexpected.” We did find that the model's accuracy is higher when trained on a paper's text rather than its reported statistics and that n-grams, higher order word combinations that humans have difficulty processing, correlate with replication. We discuss how combining human and machine intelligence can raise confidence in research, provide research self-assessment techniques, and create methods that are scalable and efficient enough to review the ever-growing numbers of publications—a task that entails extensive human resources to accomplish with prediction markets and manual replication alone.

Declining Public Health Protections within Autocratic Regimes: Impact on Global Public Health Security, Infectious Disease Outbreaks, Epidemics, and Pandemics
Frederick M. Burkle
Abstract

Public health emergencies of international concern, in the form of infectious disease outbreaks, epidemics, and pandemics, represent an increasing risk to the world’s population. Management requires coordinated responses, across many disciplines and nations, and the capacity to muster proper national and global public health education, infrastructure, and prevention measures. Unfortunately, increasing numbers of nations are ruled by autocratic regimes which have characteristically failed to adopt investments in public health infrastructure, education, and prevention measures to keep pace with population growth and density. Autocratic leaders have a direct impact on health security, a direct negative impact on health, and create adverse political and economic conditions that only complicate the crisis further. This is most evident in autocratic regimes where health protections have been seriously and purposely curtailed. All autocratic regimes define public health along economic and political imperatives that are similar across borders and cultures. Autocratic regimes are seriously handicapped by sociopathic narcissistic leaders who are incapable of understanding the health consequences of infectious diseases or the impact on their population. A cross section of autocratic nations currently experiencing the impact of COVID-19 (coronavirus disease 2019) are reviewed to demonstrate the manner where self-serving regimes fail to manage health crises and place the rest of the world at increasing risk. It is time to re-address the pre-SARS (severe acute respiratory syndrome) global agendas calling for stronger strategic capacity, legal authority, support, and institutional status under World Health Organization (WHO) leadership granted by an International Health Regulations Treaty. Treaties remain the most successful means the world has in preventing, preparing for, and controlling epidemics in an increasingly globalized world.

Mental Health Services for Syrian Refugees in Lebanon: Perceptions and Experiences of Professionals and Refugees
Hala Kerbage, Filippo Marranconi, Yara Chamoun, Alain Brunet, Sami Richa, Shahaduz Zaman
First Published January 6, 2020; pp. 849–864

Abstract
We applied semi-structured and in-depth interviews to explore the perceptions and experiences of 60 practitioners/policymakers and 25 Syrian participants involved in mental health services for refugees in Lebanon. Refugees were found to view their distress as a normal shared reaction to adversity while professionals perceived it as symptomatic of mental illness. Practitioners viewed Syrian culture as an obstacle to providing care and prioritized educating refugees about mental health conditions. Policymakers invoked the state of crisis to justify short-term interventions, while Syrian refugees requested community interventions and considered resettlement in a third country the only solution to their adverse living conditions. The therapeutic relationship seems threatened by mistrust, since refugees change their narratives as an adaptive mechanism in response to the humanitarian system, which professionals consider manipulative. We discuss the implications of our findings for mental health practice in humanitarian settings

Ethical reflections on children’s participation in educational research during humanitarian crises
Fabiana Maglio, Tejendra Pherali
First Published January 22, 2020; pp. 1–19
Abstract
This paper aims to reflect upon ethical dilemmas arising from educational research in humanitarian contexts, particularly when involving children. In recognition of the paucity of knowledge on how to define ethics in humanitarian research, we review the existing body of literature that explores ethical responsibilities towards children involved in educational research at school and their communities. The paper argues that research ethics should be at the forefront of every study that is conducted in crisis contexts and more rigorous review and vetting processes are necessary to protect children, researchers and wider communities who live in crisis settings. We hope to promote an informed debate on research ethics in humanitarian contexts, while encouraging the development of rigorous guidelines, notes and minimum standards.

Original Article: Non-Empirical
Islamic concepts in ethics of pediatric clinical research
Areej AG AlFattani, Hala AlAlem
First Published February 3, 2020; pp. 1–11
Abstract
Background:
Medical research on children has increased in the last 20 years. International ethical regulations for conducting clinical research on children may not pertain to Muslim communities where religious beliefs play a big role in decision-making process.
Methods:
The aim of this paper was to illustrate the origins of bioethics principles in Islam, to appraise the existing regulations of Islamic countries, and to systematically review areas of improvements.
Conclusion:
This review recommends a customized approach for regulators to set culturally adapted ethical guidelines that highlight Islamic traditions in dealing with children of different ages.

Preventing monopolies in knowledge infrastructure is the next battleground for publishers and research institutions

*Summary*
After decades of debate on the feasibility of open access (OA) to scientific publications, we may be nearing a tipping point. A number of recent developments, such as Plan S, suggest that OA upon publication could become the default in the sciences within the next several years. Despite uncertainty about the long-term sustainability of OA models, many publishers who had been reluctant to abandon the subscription business model are showing openness to OA (1). Although more OA can mean more immediate, global access to scholarship, there remains a need for practical, sustainable models, for
careful analysis of the consequences of business model choices, and for “caution in responding to passionate calls for a ‘default to open’” (2). Of particular concern for the academic community, as subscription revenues decline in the transition to OA and some publishers prioritize other sources of revenue, is the growing ownership of data analytics, hosting, and portal services by large scholarly publishers. This may enhance publishers’ ability to lock in institutional customers through combined offerings that condition open access to journals upon purchase of other services. Even if such “bundled” arrangements have a near-term benefit of increasing openly licensed scholarship, they may run counter to long-term interests of the academic community by reducing competition and the diversity of service offerings. The healthy functioning of the academic community, including fair terms and conditions from commercial partners, requires that the global marketplace for data analytics and knowledge infrastructure be kept open to real competition.

Interventions for treatment of COVID-19: a protocol for a living systematic review with network meta-analysis including individual patient data (The LIVING Project)
COVID-19 is a rapidly spreading virus infection that has quickly caused extensive burden to individual, families, countries, and the globe. No intervention has yet been proven effective for the treatment of COVID-19.

Torture Journal
2019 Volume 29 - No.3
https://irct.org/publications/torture-journal/143

This issue of the Torture Journal takes its focus on measuring torture rehabilitation processes and results. Scientific contributions on this subject include a measurement of rehabilitation outcomes with an instrument designed at the Marjorie Kovler Center in Chicago; a validation study examining diagnoses of Post-Traumatic Stress Disorder (PTSD) and Complex Post-Traumatic Stress Disorder (CPTSD) in refugee and torture survivor populations; and a study of gender-based violence in Honduras, El Salvador and Guatemala.

The issue also comprises an applied perspective on organizational development in torture rehabilitation programs and two letters to the editor addressing involvement of medical personnel in torture in Syria and a response to the concept of psychological torture.

Finally, Secretary-General of the International Rehabilitation Council for Torture Victims, Lisa Henry, and Chief Executive Officer of STARTTS Centre in Australia, Jorge Aroche, provide an open letter to the Torture Journal readers and a celebratory text of STARTTS' 30th anniversary respectively.

COVID-19 – the role of mass gatherings
Shahul H. Ebrahim, Ziad A. Memish
Article 101617
Abstract
Mass gathering (MG) medicine emerged against the backdrop of the 2009 pandemic H1N1 Public Health Emergency of International Concern (PHEIC) when the Kingdom of Saudi Arabia (KSA) hosted the largest annual mass gathering of over 3 million pilgrims from 180 plus countries. However, the events surrounding the latest threat to global health, the PHEIC COVID-19, may be sufficient to highlight the role of mass gatherings, mass migration, and other forms of dense gatherings of people on the emergence, sustenance, and transmission of novel pathogens. The COVID-19 spread illustrates the role of MGs in exacerbation of the scope of pandemics. Cancellation or suspension of MGs would be critical to pandemic mitigation. It is unlikely that medical countermeasures are available during the early phase of pandemics. Therefore, mitigation of its impact, rather than containment and control becomes a priority during pandemics. As the most systematically studied MG-related respiratory disease data come from KSA, the cancellation of Umrah by the KSA authorities, prior to emergence of cases, provide the best opportunity to develop mathematical models to quantify event cancellations related mitigation of COVID-19 transmission in KSA and to the home countries of pilgrims. COVID-19 has already provided examples of both clearly planned event cancellations such as the Umrah suspension in KSA, and where outbreaks and events were continued.

The cancellation of mass gatherings (MGs)? Decision making in the time of COVID-19
Qanta A. Ahmed, Ziad A. Memish
Article 101631
Abstract
Our recommendation, as experts who have monitored health hazards at the Hajj for over 15 years, especially if the situation with COVID-19 continues to escalate globally is that Hajj 2020 will be at risk of being suspended and a means for Muslims to fulfill their rights in the future either personally or even by proxy need to be announced. The same holds true for the Summer 2020 Olympics in Japan and for many other MGs and large gatherings. Decisions in the time of COVID-19 will be closely followed and will be a blueprint for other mass gatherings.

New Technologies: Where To?
This issue focuses on new technologies and their potential benefits for humanity as well as their expanding use in advancing the 2030 Agenda. It explores the promise of our digital age, while posing
important questions about where these technologies are leading us, and how their misuse could also lead to increased inequality and conflict.
