## **The Sentinel**

**Health, Human Rights, Humanitarian Action, Heritage-Education-Literacy,  
Climate-Environment, Development, Peace**

---

**Period ending 28 April 2024 :: Number 507**

*This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.*

*The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted at <https://ge2p2-center.net/>.*

***Request email delivery of the pdf:***

*If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to [david.r.curry@ge2p2global.org](mailto:david.r.curry@ge2p2global.org)*

*The Sentinel is a service of the **GE2P2 Global Foundation**, which is solely responsible for its content. Comments and suggestions should be directed to:*

## ***Week in Review***

*A highly selective capture of strategic developments, research, commentary, analysis and announcements spanning Human Rights Action, Humanitarian Response, Health, Education, Development, Heritage Stewardship, Peace-Conflict. Achieving a balance across these broad themes is a challenge and we appreciate your observations and ideas in this regard.*

## **Food Insecurity - Crises**

### **[Acute hunger remains persistently high in 59 countries with 1 in 5 people assessed in need of critical urgent action - Global Report on Food Crises](#)**

*Global Network Against Food Crises' partners call for a transformative approach to break the cycle of acute hunger*

ROME/GENEVA/NEW YORK, 24 April 2024 - According to the latest Global Report on Food Crises (GRFC), **nearly 282 million people in 59 countries and territories experienced high levels of acute hunger in 2023 - a worldwide increase of 24 million from the previous year.** This rise was due to the report's increased coverage of food crisis contexts as well as a sharp deterioration in food security, especially in the Gaza Strip and the Sudan.

For four consecutive years, the proportion of people facing acute food insecurity has remained persistently high at almost 22 percent of those assessed, significantly exceeding pre-COVID-19 levels.

**Children and women are at the forefront of these hunger crises, with over 36 million children under 5 years of age acutely malnourished across 32 countries,** the report shows. Acute malnutrition worsened in 2023, particularly among people displaced because of conflict and disasters.

The Global Network Against Food Crises **urgently calls for a transformative approach that integrates peace, prevention and development action alongside at-scale emergency efforts to break the cycle of acute hunger** which remains at unacceptably high levels.

"This crisis demands an urgent response. Using the data in this report to transform food systems and address the underlying causes of food insecurity and malnutrition will be vital," said António Guterres, UN Secretary-General.

### ***Protracted hunger***

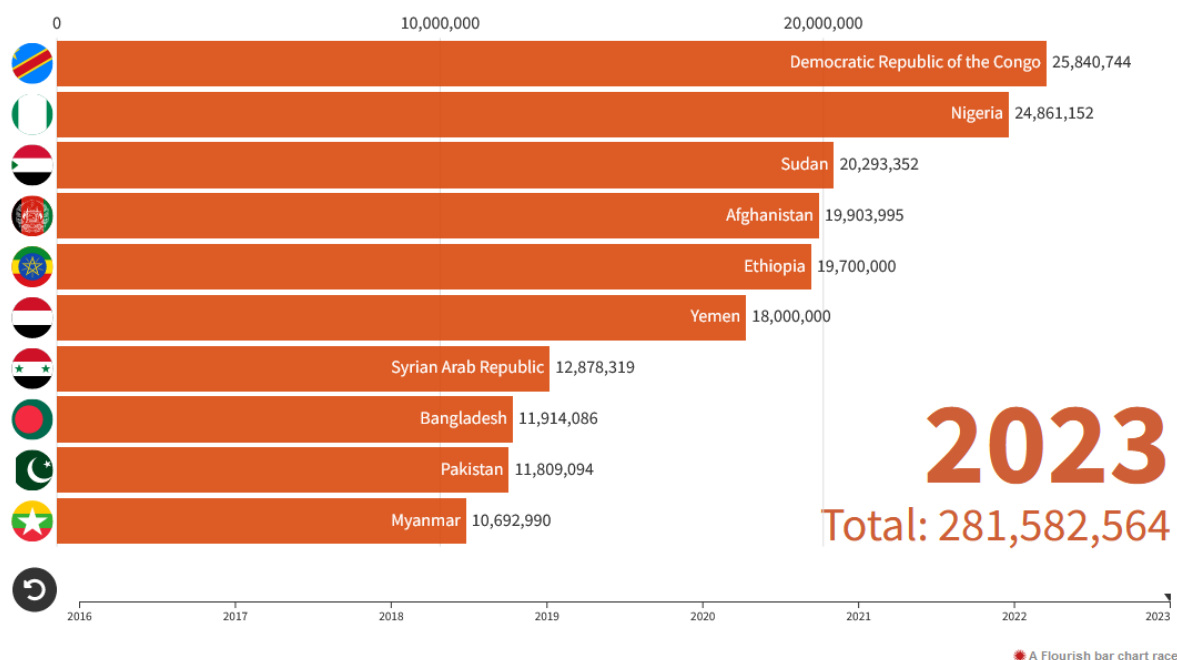

Thirty-six countries have been consistently featured in the GRFC analyses since 2016, reflecting continuing years of acute hunger, and currently representing 80 percent of the world's most hungry.

There has also been an increase of 1 million people facing Emergency (IPC/CH Phase 4) levels of acute food insecurity across 39 countries and territories, with the biggest increase in the Sudan.

**In 2023, more than 705,000 people were at the Catastrophe (IPC/CH Phase 5) level of food insecurity and at risk of starvation** – the highest number in the GRFC's reporting history and up fourfold since 2016. The current situation in the Gaza Strip accounts for 80 percent of those facing imminent famine, along with South Sudan, Burkina Faso, Somalia and Mali.

According to the GRFC 2024 future outlook, **around 1.1 million people in the Gaza Strip and 79 000 people in South Sudan are projected to be in Catastrophe (IPC/CH Phase 5) by July 2024**, bringing the total amount of people projected in this phase to almost 1.3 million.

### Countries/territories with the largest number of people facing high levels of acute food insecurity, 2016-2023

### Key drivers of food crises

Intensifying conflict and insecurity, the impacts of economic shocks, and the effects of extreme weather events are continuing to drive acute food insecurity. These interlinked drivers are exacerbating food systems fragility, rural marginalization, poor governance, and inequality, and lead to massive displacement of populations globally. The protection situation of displaced population is additionally impacted by food insecurity.

**Conflict remained the primary driver affecting 20 countries** with nearly 135 million people in acute food insecurity – almost half of the global number. The Sudan faced the largest deterioration due to conflict, with 8.6 million more people facing high levels of acute food insecurity as compared with 2022.

**Extreme weather events were the primary driver in 18 countries** where over 77 million people faced high levels of acute food insecurity, up from 12 countries with 57 million people in 2022. In 2023, the world experienced its hottest year on record and climate related shocks impacted populations, with episodes of severe floods, storms, droughts, wildfires, and pest and disease outbreaks.

**Economic shocks primarily affected 21 countries** where around 75 million people were facing high levels of acute food insecurity, due to their high dependency on imported food and agricultural inputs, persisting macroeconomic challenges, including currency depreciation, high prices and high debt levels...

The [Global Report on Food Crises \(GRFC\)](#) is produced annually by the [Food Security Information Network \(FSIN\)](#) and launched by the [Global Network Against Food Crises \(GNAFC\)](#) – a multistakeholder

*initiative that includes United Nations organizations, the European Union, the United States Agency for International Development, and non-governmental agencies working together to tackle food crises.*

## **UK – Asylum Seekers – Rwanda**

### **[UK-Rwanda Treaty completes ratification process](#)**

*UK and Rwanda pass further milestone with Treaty ratification.*

25 April 2024 *Press release*, UK Home Office

**The UK-Rwanda Treaty has been ratified as the Safety of Rwanda Act receives Royal Assent**, marking the end of a crucial week in Parliament and getting flights to Rwanda one step closer.

The internationally binding Treaty between the UK and Rwanda addresses the Supreme Court's findings on the partnership last year, introducing measures that make clear Rwanda will not return anyone to an unsafe country. **The Treaty works hand in hand with the Safety of Rwanda Act, which has now received Royal Assent, and confirms that Rwanda is safe for the purposes of relocating people.**

Home Secretary James Cleverly and Rwandan Minister of Foreign Affairs Dr. Vincent Biruta signed the Treaty during a ceremony in Kigali in December 2023. Today, Thursday 25 April, the government completed ratification, including laying a statement in Parliament confirming its intent to ratify the Treaty. This allows for the final phase of operational planning to get flights off the ground to Rwanda, to begin...

**The UK and Rwanda Migration and Economic Development Partnership paves the way for an innovative new model for tackling illegal migration, with countries across Europe exploring similar agreements, including Austria, Germany, Denmark, and Italy in their deal with Albania.**

The agreement goes hand-in-hand with wider action to stop the boats, with the number of small boat arrivals falling by more than a third in 2023.

This includes work with international partners which prevented more than 26,000 crossings last year, as well as work helping to dismantle 82 organised crime groups since July 2020...

.....

### **[UK-Rwanda asylum law: UN leaders warn of harmful consequences](#)**

23 April 2024 *Press releases*

GENEVA – Following the passage of the "Safety of Rwanda" Bill by the UK Parliament, two UN leaders have again sounded the alarm on the harmful impact it will have on global responsibility-sharing, human rights and refugee protection.

**Filippo Grandi, the UN High Commissioner for Refugees, and Volker Türk, the UN High Commissioner for Human Rights, are calling on the UK government to reconsider its plan to transfer asylum-seekers to Rwanda** and instead to take practical measures to address irregular flows of refugees and migrants, based on international cooperation and respect for international human rights law.

The Safety of Rwanda (Asylum and Immigration) Bill was tabled before Parliament alongside the UK-Rwanda Asylum Partnership Treaty after the UK's Supreme Court found last year that the proposed transfer of asylum-seekers to Rwanda would breach international and UK law, noting weaknesses in the Rwanda system for determining individual asylum claims. But the Bill and the Treaty do not in practice overcome the protection gaps identified by the Supreme Court. Rather, once enacted, it will restrict the UK courts from properly scrutinising removal decisions, leaving asylum-seekers with limited room to appeal even if they face significant risks.

**"The new legislation marks a further step away from the UK's long tradition of providing refuge to those in need, in breach of the Refugee Convention," said Grandi.** "Protecting refugees requires all countries – not just those neighbouring crisis zones – to uphold their obligations. This arrangement seeks to shift responsibility for refugee protection, undermining international cooperation and setting a worrying global precedent."

"The UK has a proud history of effective, independent judicial scrutiny. It can still take the right steps and put in place measures to help address the factors that drive people to leave home, and share responsibility for those in need of protection with European and other international partners," he added...

Acknowledging the challenges presented by the irregular movement of refugees and migrants, often in dangerous circumstances, **the UN leaders nonetheless expressed grave concern that the legislation would facilitate transfers under the UK-Rwanda asylum partnership, with only limited consideration of their individual circumstances or any protection risks.** They called on the UK instead to pursue practical cooperation with countries along the routes that refugees and migrants take, to strengthen protection and offer real alternatives. This includes expanding safe and regular pathways to protection.

"By shifting responsibility for refugees, reducing the UK's courts' ability to scrutinise removal decisions, restricting access to legal remedies in the UK and limiting the scope of domestic and international human rights protections for a specific group of people, **this new legislation seriously hinders the rule of law in the UK and sets a perilous precedent globally," said Türk.**

"It is critical to the protection of the human rights and dignity of refugees and migrants seeking protection that all removals from the UK are carried out **after assessing their specific individual circumstances in strict compliance with international human rights and refugee law."**

The new legislation is the third in a series of progressively restrictive UK laws that have eroded access to refugee protection in the UK since 2022, including through a ban on access to asylum or other forms of permission to stay in the UK for those arriving irregularly via a third country. If implemented, it would pave the way for asylum-seekers, including families with children, to be summarily sent to Rwanda to present their asylum claims, with no prospect of return to the UK. It will also drastically limit the ability for asylum-seekers to challenge or appeal removal decisions, with decision-makers and judges required to conclusively treat Rwanda as a "safe" country in terms of protecting asylum-seekers – regardless of any evidence to the contrary, now or in the future. This situation is even more concerning given the legislation expressly authorizes the Government to disregard any protective interim remedies from the European Court of Human Rights.

.....

**[UK: Airlines and aviation authorities should not facilitate unlawful removals to Rwanda, UN experts say](#)**

GENEVA (22 April 2024) – UN experts\* today expressed concern about the role of airlines and aviation authorities in facilitating unlawful removals to Rwanda under the Agreement between the Government of the United Kingdom and the Government of Rwanda, and the 'Safety of Rwanda' Bill.

**"Even if the UK-Rwanda agreement and the 'Safety of Rwanda' Bill are approved, airlines and aviation regulators could be complicit in violating internationally protected human rights and court orders by facilitating removals to Rwanda," the experts said.**

They stressed that removing asylum-seekers to Rwanda or any other country where they would be at risk of refoulement would violate the right to be free from torture or other cruel, inhuman or degrading treatment...

**"If airlines and aviation authorities give effect to State decisions that violate human rights, they must be held responsible for their conduct," the experts said.**

"As the UN Guiding Principles on Business and Human Rights underline, aviation regulators, international organisations and business actors are required to respect human rights," they said.

The corporate responsibility to respect human rights set out in **UN Guiding Principle 13 prohibits companies from contributing to human rights abuses, and UN Guiding Principle 23 requires businesses to comply with all applicable laws, respect internationally recognised human rights, and treat the risk of contributing to gross human rights abuses as a compliance issue wherever they operate.**

The UN experts have been in contact with the UK Government, as well as national, European and international aviation regulators, including the UK Civil Aviation Authority (CAA), the European Union Aviation Safety Agency (EASA) and international actors, including the International Air Transport Association (IATA) and the International Civil Aviation Organization (ICAO) to express their concerns and remind them of their responsibilities. Previous engagement by UN experts on related issues includes a [communication on the UK-Rwanda Agreement](#), a [press release](#) on a related letter on the draft legislation, and a [court intervention](#) to the Court of Appeal.

## **Global Immunization**

### **[Global immunization efforts have saved at least 154 million lives over the past 50 years](#)**

24 April 2024 *Joint News Release*

**A major landmark study to be published by The Lancet** reveals that global immunization efforts have saved an estimated 154 million lives – or the equivalent of 6 lives every minute of every year – over the past 50 years. **The vast majority of lives saved – 101 million – were those of infants.**

The study, led by the World Health Organization (WHO), shows that immunization is the **single greatest contribution of any health intervention to ensuring babies not only see their first birthdays** but continue leading healthy lives into adulthood.

Of the vaccines included in the study, the **measles vaccination had the most significant impact on reducing infant mortality, accounting for 60% of the lives saved** due to immunization. This vaccine will likely remain the top contributor to preventing deaths in the future.

Over the past 50 years, vaccination against 14 diseases (diphtheria, Haemophilus influenzae type B, hepatitis B, Japanese encephalitis, measles, meningitis A, pertussis, invasive pneumococcal disease, polio, rotavirus, rubella, tetanus, tuberculosis, and yellow fever) has directly contributed to reducing infant deaths by 40% globally, and by more than 50% in the African Region.

"Vaccines are among the most powerful inventions in history, making once-feared diseases preventable," said WHO Director-General, Dr Tedros Adhanom Ghebreyesus. "Thanks to vaccines, smallpox has been eradicated, polio is on the brink, and with the more recent development of vaccines against diseases like malaria and cervical cancer, we are pushing back the frontiers of disease. With continued research, investment and collaboration, we can save millions more lives today and in the next 50 years."

**The study found that for each life saved through immunization, an average of 66 years of full health were gained – with a total of 10.2 billion full health years gained over the five decades.** As the result of vaccination against polio more than 20 million people are able to walk today who would otherwise have been paralysed, and the world is on the verge of eradicating polio, once and for all.

These gains in childhood survival highlight the importance of protecting immunization progress in every country of the world and **accelerating efforts to reach the 67 million children who missed out on one or more vaccines during the pandemic years**

### **[Global trends and scenarios for terrestrial biodiversity and ecosystem services from 1900 to 2050](#)**

BY Henrique M. Pereira, et al.

25 Apr 2024: 458-465

*Editor's summary*

The 20th century saw rates of biodiversity loss high enough to qualify as a sixth mass extinction. Climate change now further threatens species and ecosystem services. Pereira et al. forecasted changes in both biodiversity loss and ecosystem services to 2050 and compared them with changes from 1900 to 2015, combining results from 13 different models. Across three shared socioeconomic pathway scenarios, rates of biodiversity decline from land-use change are expected to be lower than in the 20th century but much higher when climate change is considered. Provisioning ecosystem services (i.e., materials) are expected to increase, but regulating services (e.g., pollination) decline under most scenarios. Outcomes depend on the scenario, suggesting that policies can make a difference. —*Bianca Lopez*

*Lopez*  
*Abstract*

Based on an extensive model intercomparison, we assessed trends in biodiversity and ecosystem services from historical reconstructions and future scenarios of land-use and climate change. During the 20th century, biodiversity declined globally by 2 to 11%, as estimated by a range of indicators. Provisioning ecosystem services increased several fold, and regulating services decreased moderately. Going forward, policies toward sustainability have the potential to slow biodiversity loss resulting from land-use change and the demand for provisioning services while reducing or reversing declines in regulating services. However, negative impacts on biodiversity due to climate change appear poised to increase, particularly in the higher-emissions scenarios. Our assessment identifies remaining modeling uncertainties but also robustly shows that renewed policy efforts are needed to meet the goals of the Convention on Biological Diversity.

### [Revealing uncertainty in the status of biodiversity change](#)

*This study presents an approach to deal with spatial, temporal and phylogenetic non-independence in large-scale analyses of biodiversity change, improving trend estimation and inference across scales.*

T. F. Johnson, A. P. Beckerman, R. P. Freckleton

#### Abstract

Biodiversity faces unprecedented threats from rapid global change<sup>1</sup>. Signals of biodiversity change come from time-series abundance datasets for thousands of species over large geographic and temporal scales. Analyses of these biodiversity datasets have pointed to varied trends in abundance, including increases and decreases. However, these analyses have not fully accounted for spatial, temporal and phylogenetic structures in the data. Here, using a new statistical framework, we show across ten high-profile biodiversity datasets<sup>2,3,4,5,6,7,8,9,10,11</sup> that increases and decreases under existing approaches vanish once spatial, temporal and phylogenetic structures are accounted for. This is a consequence of existing approaches severely underestimating trend uncertainty and sometimes misestimating the trend direction. Under our revised average abundance trends that appropriately recognize uncertainty, we failed to observe a single increasing or decreasing trend at 95% credible intervals in our ten datasets. This emphasizes how little is known about biodiversity change across vast spatial and taxonomic scales. Despite this uncertainty at vast scales, we reveal improved local-scale prediction accuracy by accounting for spatial, temporal and phylogenetic structures. Improved prediction offers hope of estimating biodiversity change at policy-relevant scales, guiding adaptive conservation responses.

#### [Excerpt]

#### ... **Implications for biodiversity science**

**The abundance datasets we analyse are influential in policy, tracking progress towards biodiversity targets at national and international scales<sup>16,17,29</sup>, and so it is vital that any inference gained is both valid and reliable.** Our work shows that when biodiversity change datasets are analysed without accounting for correlative non-independence among phylogeny, time and space, there is a substantial risk that trend uncertainty could be underestimated, trend direction misestimated and policy misinformed. Further, once uncertainty is appropriately attributed in the correlated effect model, we failed to detect a single significant trend in collective abundance across the 10 datasets under 95% credible intervals. This pervasive pattern points to a highly uncertain status in collective abundance trends; that is, it is unclear how biodiversity is changing across vast spatial and taxonomic scales once uncertainty is appropriately estimated...

**Despite failing to detect a decline in collective abundance across the ten datasets at 95% credible intervals, our results do not necessarily mean** that wildlife abundances have not declined, or that the current estimates of trends are incorrect. It is possible that abundances may have increased on average, or perhaps declines have been far more extreme than we have previously imagined; **simply, the uncertainty is too high to know.** With this in mind, we re-emphasize calls to urgently expand data collection and improve trend detectability, but this will only help to estimate current and future biodiversity trends. Given the large uncertainty associated with our estimates of abundance change, it seems that past abundance patterns are lost and undetectable at present. A shift towards causal frameworks of detection and attribution is probably necessary to estimate past biodiversity change<sup>14</sup>...

**The implications of our findings extend beyond biodiversity change.** Spatial, temporal and phylogenetic data structures are common in ecological and evolutionary research. Under the presence of correlative non-independence, **there is a potentially pervasive risk in the field that we have mis-specified our statistical models, violating data independence assumptions, and producing unreliable inference.** However, this also presents an opportunity, as the correlative effect model could be adapted for a wide array of settings, improving inference across ecology and evolution. The model could also streamline workflows by simultaneously capturing spatial, phylogenetic and temporal structures, avoiding the need to capture terms in multiple separate analyses.

**Our analytical advance offers new potential in predictive ecology, but given the severity of the potential implications of biodiversity loss<sup>35</sup>, it is vital that we continue to expand and improve these methods.** We offer a general framework for addressing spatial, temporal and phylogenetic non-independence, but further advances are necessary, considering underlying issues around time-series length<sup>36</sup>, bias and non-probability<sup>37</sup>, nonlinearity and varied responses to environmental change<sup>38</sup>, modern data collection philosophies<sup>39</sup> and rigorous analysis approaches<sup>40</sup>. This combination of improved methods and data has the potential to reveal patterns of biodiversity change and disentangle the complex processes shaping our ecosystems.

## Neurotechnology – Ethics

### [The Ethics of Neurotechnology: UNESCO appoints international expert group to prepare a new global standard](#)

22 April 2024

UNESCO's Director-General Audrey Azoulay has **appointed 24 experts from all regions of the world to develop the first global framework on the ethics of neurotechnology.** They are meeting for the first time in Paris from 22 to 26 April. Based on the work of these experts, UNESCO will lead a discussion with its 194 Member States on the adoption of the framework by the end of 2025.

Director-General Azoulay said, "Neurotechnology has the potential to solve many health issues, but it could also threaten human rights, freedom of thought and privacy. There is an urgent need to establish a common ethical framework at the international level, as UNESCO has done for artificial intelligence in 2021. There can be no neurodata without neurorights."

In 2021, UNESCO's International Bioethics Committee's report, 'Ethical issues of Neurotechnology', identified the **threats that neurotechnology poses to rights and fundamental freedoms such as cerebral integrity and personal identity.** As demonstrated by another UNESCO report published

in 2023, the pace of innovation in this area accelerated when newly available Generative AI was integrated into neurotechnology research....

### ***A framework proposed for adoption in November 2025***

Today, this initiative is taking shape with Audrey Azoulay's appointment of 24 neurotechnology experts mandated to design and write the draft ethical framework. The ad hoc expert group gathers professionals specialized in neurosciences, psychology, neurotechnology, artificial intelligence, brain machine interface, ethics and bioethics, from all regions of the world and from diverse cultural backgrounds.

**The work of these experts will be presented to various stakeholders at the national, sub-regional and regional levels for their comments later in 2024.** It will also be followed by a discussion between the 194 Member States of the Organization, led by the UNESCO Secretariat, with a view to submitting this global ethical framework for adoption at the 43rd session of the General Conference of UNESCO, in November 2025...

[Global Malaria Programme operational strategy 2024-2030](#)

*Overview*

As WHO's technical department for malaria, the Global Malaria Programme has an important role to play in leading the global response against this disease. Through its direct actions and network, it has the potential to shape the malaria ecosystem and achieve impact at country level. With this in mind, the Global Malaria Programme has developed an operational strategy outlining its priorities for the period 2024–2030 and the 4 strategic levers to control and eliminate malaria that are decisively within the Programme's mandate: norms and standards, new tools and innovation, strategic information for impact, and leadership. The strategy describes how the Global Malaria Programme will also transform by collaborating more effectively with other programmes, regional and country offices and partners, guided by lessons learned from WHO's Thirteenth General Programme of Work (GPW13) and the GPW14 priorities.

**[Peoples' lives are improving, but greater efforts still needed to ensure no one is left behind](#)**

26 April 2024 - Human life expectancy has improved across many parts of the world, according to recent data. Great strides have also been made in lowering fertility rates among young people and in reducing poverty globally. Many regions of the world have also seen improved access to, and reduced gender gaps in, education, health services, including sexual and reproductive health services and living conditions.

Press Release: 25 April 2024

[ICC Office of the Prosecutor launches Policy on Complementarity and Cooperation](#)

At events held in Bogotá, Colombia and Bangui, Central African Republic (CAR), the Office of the Prosecutor (OTP) of the International Criminal Court (ICC) launched today a new Policy on Complementarity and Cooperation.

The Policy presents a fundamentally renewed approach by the Office to the principles of complementarity and cooperation at the heart of the Rome Statute by bringing its work closer to affected communities and deepening its partnerships with States, civil society, and regional and international organisations.

At the event in Bogotá, ICC Prosecutor Karim A.A. Khan KC described the vision behind the renewed complementarity drive of his Office: "The ICC should be a hub at the centre of global accountability efforts, not considered as a detached apex of the international criminal justice system. By working together, by finding new ways of collaborating, we deliver better."...

**[The financial sustainability of Diamond open access publishers](#)**

26 Apr 2024

The DIAMAS (Developing Institutional Open Access Publishing Models to Advance Scholarly Communication) project has published a report (...)

... The report reveals a clear need for stable and long-term funding that entails less administration, and the crucial role of large infrastructures, such as Diamond OA hosting platforms, and open source software. It particularly highlights the need to fund both national and international infrastructures used by many small to medium-size institutional publishers and service providers.

:: A summary of the findings and recommendations can be found in the [DIAMAS blog](#) and a [factsheet](#) published on the DIAMAS website,

- While Africa shoulders nearly all the world's malaria burden – 95% of deaths and 94% of cases in 2022 were in sub-Saharan Africa – access to quality-assured malaria treatment options remains a significant challenge.
- At the same time, the main WHO-recommended antimalarial treatment – artemisinin-based combination therapy – is losing its effectiveness as the malaria parasite develops resistance.
- A new Unitaid report shows that by strengthening antimalarial manufacturing capacity in Africa and helping to diversify the use of recommended treatments, we can help fight drug resistance and strengthen health security for millions of people at risk of malaria on the continent.

### **Feminist responses to 'norm-spoiling' at the United Nations**

23 April 2024

*Briefing/policy paper*

*Threats to progress on gender equality, LGBTQI+ diversity and women's rights are gaining traction. Across the world and in global, national and local spaces, anti-rights actors are working collectively to undermine and restrict the rights of women and LGBTQI+ people.*

'Norm-spoiling' refers to an agenda that seeks to undermine the legitimacy of gender equality and women's rights norms. Such activities are sustained by an increasingly professionalised network of actors disseminating anti-rights narratives within UN systems and working to change human rights discourse.

This ODI Briefing note explores the what, who and how of 'norm-spoiling', as well as the successful counter-strategies being employed by feminist organisations to resist these efforts. It outlines what is known about the well-coordinated tactics eroding rights-based norms at the international level, and

what can be done protect women's and LGBTQ+ rights, which have been hard-won through decades of feminist organising...

#### *Key messages*

- Norm-spoiling in multilateral arenas, such as the United Nations, aims to undermine the international consensus on women's rights.
- Anti-gender actors are gaining ground through diverse and unusual alliances that are increasingly well-organised and well-funded. Together, they are creating a dangerous movement that opposes the rights of women and LGBTQI+ people.
- Despite this challenging environment, international feminist activists are working pro-actively in multilateral spaces to defend women's rights, disrupt the expansion of anti-gender influence, and promote new and positive change.
- To support these efforts, recommendations include: communicating and raising awareness of norm-spoiling; increasing and improving funding to feminist organisations; bolstering evidence and data on anti-rights strategies and what works to counteract them; supporting coalition building and inclusive transnational alliances; strategically strengthening advocacy and coordination of lobbying efforts at the UN.

### **Beyond survival in displacement: rights essential for wellbeing**

22 April 2024

#### *Briefing/policy paper*

Wellbeing is not just a luxury to be enjoyed in times of peace or prosperity, but also a fundamental right during crisis. But, within a humanitarian system that prioritises the provision of what is deemed lifesaving assistance and the meeting of basic needs, interventions too often overlook large parts of what affected people really want, in order to live meaningful lives.

**[The Building Blocks of Equitable Local Economies](#)**

April 22, 2024

Communities throughout the United States are facing decisions about how to use federal resources to advance local development efforts. These choices can either foster greater fairness within their regions or reinforce entrenched disparities embedded within our nation's legal frameworks and programs. To achieve greater equity, federal funds should be used in a way that guarantees inclusive participation in and benefits from economic expansion, particularly for historically marginalized groups.

To help inform these decisions, previous Urban Institute work identified key lessons and common building blocks that can support progress toward equity and inclusion during a city's economic recovery...

News 27 Apr 2024

- 1,000 government, business and civil society leaders to gather in Riyadh, Saudi Arabia
- Amid an increasingly complex global backdrop, the meeting aims to bridge the growing North-South divide and find collaborative solutions to shared challenges
- The meeting will drive action-oriented dialogue on three key themes: Inclusive Growth, Energy for Development, and Global Collaboration
- Watch livestreamed sessions from the meeting [here](#) and join the conversation on social media using #SpecialMeeting24

Riyadh, Saudi Arabia, 27 April 2024 – With geopolitical upheavals and complex economic challenges destabilizing a fractured world, the World Economic Forum Special Meeting on Global Collaboration, Growth and Energy for Development will convene 1,000 global leaders from 92 countries on 28-29 April, to support global dialogue and find actionable, collaborative and sustainable solutions to shared global challenges.

Building on the inaugural Growth Summit, held in Switzerland last year, the meeting will promote forward-thinking approaches to interconnected crises, while remaining realistic about shorter-term trade-offs. It will work to bridge the growing North-South divide on issues such as emerging economic policies, the energy transition and geopolitical shocks....

**[Should Children Be Included in Human Challenge Studies?](#)**

[Ariella Binik](#)

First published: 17 April 2024 <https://doi.org/10.1002/eahr.500208>

**ABSTRACT**

Human challenge studies, in which human research subjects are intentionally exposed to pathogens to contribute to scientific knowledge, raise many ethical complexities. One controversial question is whether it is ethically permissible to include children as participants. Commentary of the past decades endorses the exclusion of children, while new guidance suggests that pediatric human challenge studies can be ethically permissible. This paper argues that neither children's exclusion nor their inclusion are well justified. I examine and reject three arguments for exclusion, but suggest that these arguments establish pediatric human challenge studies as a complex ethical category of research that requires caution. I then argue for a strong presumption against children's inclusion, by drawing on an analogy to children's inclusion in phase I trials, emphasizing a requirement of necessity, and suggesting that accommodating children's vulnerability promotes an age de-escalation approach for pediatric human challenge studies research. In the final section, I suggest a procedure for ethics review.

### ***Global Medical Supply Chain Security***

Individual patients' safety and public health were compromised by critical drug shortages, substandard medications, and extremely restricted access to personal protective equipment during the COVID-19 pandemic. As health organizations and workers struggled to meet demands posed by unprecedented patient numbers and illness acuity, our complex global health ecosystem with long-standing upstream supply chain vulnerabilities failed to meet emergent downstream demand in several ways. First, material procurement and ingredient sourcing were inadequate. Second, operations lacking transparency made stopping propagation of substandard or falsified medications ineffective, inefficient, or impossible. Finally, logistical obfuscation made environmental consequences of waste management hard to assess and steward responsibly. Policy makers, health care organizations, regulators, manufacturers, and distributors each have roles in building and maintaining global medical supply chain security. This theme issue investigates how these and other agents' failures to cultivate public health capacity, nourish sustainable production processes, and carefully maintain systemic supply chain resiliency are neither accidental nor simply unfortunate, but unjust.

## **Anti-Trafficking Review**

No. 21 (2023)

<https://antitraffickingreview.org/index.php/atrjournal/issue/view/32>

*Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.*

### ***Special Issue - COVID-19: Labour, Migration, and Exploitation***

This Special Issue of Anti-Trafficking Review examines the impact of the COVID-19 pandemic on the lives of low-wage, migrant, and informal workers. With contributions from Australia, Kyrgyzstan, Russia, Europe, Nigeria, Brazil and the United States, it describes the experiences of temporary migrants, victims of trafficking, sex workers, internally displaced persons, and LGBTQ asylum seekers with violence, exploitation, discrimination, racism, and (lack of) access to healthcare and social protections. It also highlights the work of civil society organisations who stepped in to provide lifesaving support to people abandoned by the state. Importantly, contributors draw lessons from the pandemic and make policy and practice recommendations how to ensure that future disasters do not have the same negative impact on human rights.

Content type: Commentary 25 April 2024

#### *Abstract*

Africa faces a significant burden of infectious diseases, including Malaria and HIV/AIDS, along with an increasing prevalence of non-infectious diseases such as diabetes and cancer. This dual health challenge is amplified by socioeconomic difficulties, restricted access to healthcare, and lifestyle changes, thus present unique scientific needs. Effectively addressing these issues requires a skilled scientific workforce adept in comprehensive healthcare strategies. This analysis explores the critical landscape of health research in Africa, emphasizing the unique opportunity presented by the continent's youthful population, projected to reach almost 1 billion by 2050. The youth's innovative potential and fresh perspectives offer a chance to overcome development barriers in health research. Nevertheless, challenges such as under-resourced education, limited research training, inadequate mentorship, and funding difficulties persist. This paper urgently calls upon African leaders, international partners, and stakeholders to prioritize health research, mobilize funding, forge strategic partnerships, and empower the youth as essential steps to capitalize on the continent's dynamic youth for breakthrough health outcomes. Such investments are vital not just for health but for the overall economic, social, and strategic growth of the continent. Through shared responsibility and a united effort, the potential of African youth can be harnessed, leading to transformative research, improved health outcomes, and a prosperous future. This perspective represents the collective voice of passionate young researchers and advocates across Africa, calling for a new era of health research on the continent.

#### **[The New Frontiers of Gene Therapy and Gene Editing in Inflammatory Diseases](#)**

[Alessandro Romano](#) and [Alessandra Mortellaro](#)

Pages:219–231

Published Online:12 March 2024

<https://doi.org/10.1089/hum.2023.210>

*Abstract*

Inflammatory diseases are conditions characterized by abnormal and often excessive immune responses, leading to tissue and organ inflammation. The complexity of these disorders arises from the intricate interplay of genetic factors and immune responses, which challenges conventional therapeutic approaches. However, the field of genetic manipulation has sparked unprecedented optimism in addressing these complex disorders. This review aims to comprehensively explore the application of gene therapy and gene editing in the context of inflammatory diseases, offering solutions that range from correcting genetic defects to precise immune modulation. These therapies have exhibited remarkable potential in ameliorating symptoms, improving quality of life, and even achieving disease remission. As we delve into recent breakthroughs and therapeutic applications, we illustrate how these advancements offer novel and transformative solutions for conditions that have traditionally eluded conventional treatments. By examining successful case studies and preclinical research, we emphasize the favorable results and substantial transformative impacts that gene-based interventions have demonstrated in patients and animal models of inflammatory diseases such as chronic granulomatous disease, cryopyrin-associated syndromes, and adenosine deaminase 2 deficiency, as well as those of multifactorial origins such as arthropathies (osteoarthritis, rheumatoid arthritis) and inflammatory bowel disease. In conclusion, gene therapy and gene editing offer transformative opportunities to address the underlying causes of inflammatory diseases, ushering in a new era of precision medicine and providing hope for personalized, targeted treatments.

***Protecting the Environment in Armed Conflict***

[27 articles ]

In the context of the historical development of international humanitarian law (IHL), the specific protection of the environment is relatively recent. Still, in the almost fifty years since the first treaty rules emerged explicitly protecting the environment during armed conflict, modern understandings of the relationships among ecological and human health, on one hand, and the multi-layered and diverse threats that armed conflicts pose to the environment, on the other hand, have significantly advanced. This issue of the International Review of the Red Cross delves into the many ways that conflict can adversely impact the environment. The articles within it develop thoughtful analysis regarding how the existing international legal framework protects the environment during armed conflict.

*Aristotle on the Moon*

For better or worse, finding workable solutions to significant problems among people who share land, traditions, and values may be easier and more effective than global and national efforts. For the scientific enterprise, the devolution of big policy to small places poses new challenges around establishing spaces for democratic decisionmaking, building knowledge to inform those decisions, and effectively linking the two. As decisionmaking moves toward states and localities, science leaders will need to understand how the landscape of opportunity is shifting and build the capacity to answer questions posed by specific geographic communities.

#### ***Bridging the Gaps in Our Efforts to Combat Human Trafficking***

This Special Issue (SI) seeks to collect the most current knowledge on gaps in the research realm or intervention development. For example, until recently, the primary focus of intervention and prevention efforts has focused on the supply side of the equation. There needs to be more quality research on the demand side of the equation. Similarly, there are ongoing issues of reliable data (i.e., measurement) and how best to collect it; the issue of under-counting and possible system failure issues; navigating the existing “system” and its barriers; the challenges of prosecutions and convictions; and “siloeing” of NGOs, among a host of other themes and issues.

The SI’s focus is broad, and we do not want to prejudice the process by assuming that all the (primary) challenges are adequately understood and addressed in our efforts to combat human trafficking. Instead, as acknowledged by experts in the field, we invited a group of experienced researchers and practitioners to contribute to this collective effort. More importantly, we sought voices from the global south for inclusion in this volume, e.g., India, Cambodia, and South Africa.

To assure adequate coverage and balance against the traditional preference for academic-type research papers, we included two broad types of articles in this volume: shorter articles (around 2,500 words) from several front-line organizations and services that speak directly (from their experience) to the challenges of meeting their objectives and mandates and full-length empirically based articles to point out or address some of the gaps in “human trafficking” (HT) research.

[Revealing uncertainty in the status of biodiversity change](#)

*This study presents an approach to deal with spatial, temporal and phylogenetic non-independence in large-scale analyses of biodiversity change, improving trend estimation and inference across scales.*

T. F. Johnson, A. P. Beckerman, R. P. Freckleton

#### *Abstract*

Biodiversity faces unprecedented threats from rapid global change<sup>1</sup>. Signals of biodiversity change come from time-series abundance datasets for thousands of species over large geographic and temporal scales. Analyses of these biodiversity datasets have pointed to varied trends in abundance, including increases and decreases. However, these analyses have not fully accounted for spatial, temporal and phylogenetic structures in the data. Here, using a new statistical framework, we show across ten high-profile biodiversity datasets<sup>2,3,4,5,6,7,8,9,10,11</sup> that increases and decreases under existing approaches vanish once spatial, temporal and phylogenetic structures are accounted for. This is a consequence of existing approaches severely underestimating trend uncertainty and sometimes misestimating the trend direction. Under our revised average abundance trends that appropriately recognize uncertainty, we failed to observe a single increasing or decreasing trend at 95% credible intervals in our ten datasets. This emphasizes how little is known about biodiversity change across vast spatial and taxonomic scales. Despite this uncertainty at vast scales, we reveal improved local-scale prediction accuracy by accounting for spatial, temporal and phylogenetic structures. Improved prediction offers hope of estimating biodiversity change at policy-relevant scales, guiding adaptive conservation responses.

#### **[Characteristics of commercial determinants of health research on corporate activities: A scoping review](#)**

Raquel C. Burgess, Kate Nyhan, Naisha Dharia, Nicholas Freudenberg, Yusuf Ransome  
Research Article | published 26 Apr 2024 PLOS ONE  
<https://doi.org/10.1371/journal.pone.0300699>

*Abstract*

Introduction

Business practices have influenced human health for centuries, yet an overarching concept to study these activities across nations, time periods, and industries (called 'the commercial determinants of health' (CDH)) has emerged only recently. The purpose of this review was to assess the descriptive characteristics of CDH research and to identify remaining research gaps.

#### Methods

We systematically searched four databases (Scopus, OVID Medline, Ovid Embase, and Ovid Global Health) on Sept 13, 2022 for literature using CDH terms that described corporate activities that have the potential to influence population health and/or health equity (n = 116). We evaluated the following characteristics of the literature: methods employed, industries studied, regions investigated, funders, reported conflicts of interest, and publication in open-access formats.

#### Results

The characteristics of the articles included that many were conceptual (50/116 articles; 43%) or used qualitative methods (37; 32%). Only eight articles (7%) used quantitative or mixed methods. The articles most often discussed corporate activities in relation to the food and beverage (51/116; 44%), tobacco (20; 17%), and alcohol industries (19; 16%), with limited research on activities occurring in other industries. Most articles (42/58 articles reporting a regional focus; 72%) focused on corporate activities occurring in high-income regions of the world.

#### Conclusions

Our findings indicate that literature that has used CDH terms and described corporate practices that influence human health has primarily focused on three major industries in higher-income regions of the world. Qualitative methods were the most common empirical method for investigating these activities. CDH-focused investigations of corporate practices conducted by less-studied industries (e.g., social media) and in lower-income regions are recommended. Longitudinal quantitative studies assessing the associations between corporate practices and a range of health outcomes is also a necessary next step for this field.

*Abstract*

Researchers in the biological and behavioural sciences are increasingly conducting collaborative, multi-sited projects to address how phenomena vary across ecologies. These types of projects, however, pose additional workflow challenges beyond those typically encountered in single-sited projects. Through specific attention to cross-cultural research projects, we highlight four key aspects of multi-sited projects that must be considered during the design phase to ensure success: (1) project and team management; (2) protocol and instrument development; (3) data management and documentation; and (4) equitable and collaborative practices. Our recommendations are supported by examples from our experiences collaborating on the Evolutionary Demography of Religion project, a mixed-methods project collecting data across five countries in collaboration with research partners in each host country. To existing discourse, we contribute new recommendations around team and project management, introduce practical recommendations for exploring the validity of instruments through qualitative techniques during piloting, highlight the importance of good documentation at all steps of the project, and demonstrate how data management workflows can be strengthened through open science practices. While this project was rooted in cross-cultural human behavioural ecology and evolutionary anthropology, lessons learned from this project are applicable to multi-sited research across the biological and behavioural sciences.

#### **[Global trends and scenarios for terrestrial biodiversity and ecosystem services from 1900 to 2050](#)**

BY Henrique M. Pereira, et al.

25 Apr 2024: 458-465

*Editor's summary*

The 20th century saw rates of biodiversity loss high enough to qualify as a sixth mass extinction. Climate change now further threatens species and ecosystem services. Pereira et al. forecasted changes in both biodiversity loss and ecosystem services to 2050 and compared them with changes from 1900 to 2015, combining results from 13 different models. Across three shared socioeconomic pathway scenarios, rates of biodiversity decline from land-use change are expected to be lower than in the 20th century but much higher when climate change is considered. Provisioning ecosystem services (i.e., materials) are expected to increase, but regulating services (e.g., pollination) decline under most scenarios. Outcomes depend on the scenario, suggesting that policies can make a difference. —*Bianca Lopez*

*Abstract*

Based on an extensive model intercomparison, we assessed trends in biodiversity and ecosystem services from historical reconstructions and future scenarios of land-use and climate change. During the 20th century, biodiversity declined globally by 2 to 11%, as estimated by a range of indicators. Provisioning ecosystem services increased several fold, and regulating services decreased moderately. Going forward, policies toward sustainability have the potential to slow biodiversity loss resulting from land-use change and the demand for provisioning services while reducing or reversing declines in regulating services. However, negative impacts on biodiversity due to climate change appear poised to increase, particularly in the higher-emissions scenarios. Our assessment identifies remaining modeling uncertainties but also robustly shows that renewed policy efforts are needed to meet the goals of the Convention on Biological Diversity.

### **[The potential role of cultural and religious healing practices in shaping community vulnerability to highly infectious diseases in western Kenya](#)**

Naomi Wambui Nganga, Reuben Onkoba Momanyi, Caleb Chemirmir, Hazael Biwott, George Ayodo, Monica Orero, Damaris Ochanda, Sarah Ngere, Winnie Ogola, Titus Murundu, Geoffrey Munene, Zachary Misiani, Michael Ayaibei, Richard Dimba Kiaka

medRxiv 2024.04.24.24306297; doi: <https://doi.org/10.1101/2024.04.24.24306297>

*Abstract*

We draw from empirical research conducted in communities in three border counties in western Kenya – Homa Bay, Bungoma and West Pokot - to examine how cultural and religious beliefs and healing practices can potentially shape the vulnerability of those communities to highly infectious diseases. Fieldwork consisting of mixed methods namely, key informant interviews with traditional and religious healers as well as their patients, focus group discussions with community members knowledgeable on cultural customs and practices, and participatory inquiry workshops with health professionals and administrators were used to collect the data. We find that traditional and religious beliefs and healing practices potentially shape community vulnerability to highly infectious diseases in two major ways. First, is a dualistic illness etiology involving a biomedical and socio-cultural etiology. Unexplained illnesses and illnesses that did not respond to conventional medicine were treated using traditional medicine. Making traditional and religious healers the first mile treatment preference could potentially delay appropriate treatment and compromise safe handling in case the disease is highly infectious. Second aspect pertains to the risks in the traditional and spiritual healing practices. Shared consecrated water often fetched from a large water body, laying of hands, use of herbs and rituals involving slaughtering of animals enhanced contacts. The use of protective gears during healing was inconsistent among the healers, but largely lacking as many healers could not afford them or were considered to reduce patient's faith in the healing powers. These practices potentially predispose people to highly infectious diseases and can hasten the spread and symptom severity. To reduce the vulnerability of border communities to highly infectious diseases, we argue for a need for comprehensive strategies

that consider the intersecting factors of vulnerability to outbreaks, healing beliefs and practices. This may involve policy initiatives aimed at integrating traditional medicine practice and the mainstream health system.

#### *Abstract*

It has been asserted that there was an erosion of medical ethics during the Covid-19 pandemic and a departure from the principle of obtaining fully informed consent from patients before treatment. In light of these assertions, this article reviews the historical development of medical ethics and the approach to obtaining informed consent, and critiques the consent practices before and during the pandemic. It then describes a new tool for displaying key statistics on the benefits and risks of interventions to help explain them to patients and suggests a more rigorous process for seeking fully informed consent in the future.

#### **[Mental capacity assessment in the multi-professional real world: a qualitative study of six areas of uncertainty](#)**

[version 1; peer review: awaiting peer review]

Andrew McWilliams \*Kevin Ariyo \* Anthony S. David, Gareth S. Owen

#### *Abstract*

##### Background

The Mental Capacity Act 2005 of England and Wales is a ground-breaking piece of legislation with reach into healthcare, social care and legal settings. Professionals have needed to develop skills to assess mental capacity and handle malign influence, but it is unclear how assessments are implemented in real world settings. Our previously reported survey found professionals juggling competing resources in complex systems, often struggling to stay up to date with law.

The current follow-up study uses one-to-one interviews of professionals to characterise in detail six areas of uncertainty faced when assessing mental capacity, whilst suggesting ways to make improvements.

##### Methods

Forty-four healthcare, social care and legal professionals were interviewed, using a semi-structured topic guide. Transcripts were analysed using framework analysis: a qualitative technique built to investigate healthcare policy.

##### Results

Our topic guide generated 21 themes. In relation to the six areas of uncertainty: 1) Many participants stressed the importance of capturing a holistic view, adding that their own profession was best-placed

for this - although a medical diagnosis was often needed. 2) The presumption of capacity was a laudable aim, though not always easy to operationalise and occasionally being open to abuse. 3) There was cautious interest in psychometric testing, providing a cognitive context for decisions. 4) Undue influence was infrequent, but remained under-emphasised in training. 5) Multi-professional assessments were common, despite doubts about fitting these within local resources and the law. 6) Remote assessment was generally acceptable, if inadequate for identifying coercion.

#### Conclusions

Practical constraints and competing demands were reported by professionals working within real world systems. Assessment processes must be versatile, equally applicable in routine and emergency settings, across diverse decisional types, for both generalist and specialist assessors, and able to handle coercion. Recognising these challenges will guide development of best practices in assessment and associated policy.

#### *Plain language summary*

The Mental Capacity Act 2005 of England and Wales is an important piece of law for professionals working in health and social care or as lawyers. It explains how to assess whether a person is able to take a particular decision for themselves – and therefore has “mental capacity” in the eyes of society. Professionals have needed to develop skills to assess mental capacity, and to recognise situations where family or friends are trying to influence decisions for their own interests.

We previously reported a large scale survey of professionals who assess mental capacity. The current study uses one-to-one interviews, exploring in detail six areas of uncertainty around capacity assessment which were described in that survey.

We interviewed 44 health and social care professionals and lawyers, then analysed their responses. We found 21 themes relating to the six areas of uncertainty: 1) The importance of capturing a holistic view of the person’s life; 2) Challenges for assessors when trying to presume initially that a person does have mental capacity, as the law asks assessors to do; 3) Detailed testing by psychologists could be useful; 4) Other people were rarely thought to try to influence decisions, but awareness of this possibility should be emphasised in training; 5) Multi-professional assessments were common, despite doubts about whether these were possible in all settings or fit with the law; 6) Remote assessment was generally acceptable, but was poor at identifying if people were being influenced.

Practical constraints and competing demands were reported by professionals working within real world systems. Our analysis suggests that mental capacity assessment processes need to be versatile, so they can work well in routine and emergency settings and for a range of types of decisions. Recognising these challenges will guide development of best practices in assessment and associated policy.

#### *Article Excerpt*

##### *...2. Presumption of capacity*

The law is clear that assessment must start from a position of autonomy and self-determination, with the presumption of mental capacity enshrined into s.1 MCA 2005. We found that this presumption was indeed often seen as helpful, including to remind assessors to approach each decision with fresh eyes. Some participants felt uneasy that the instigation of an assessment at all might be a paternalistic act running counter-current to the presumption. However, others articulated that it was right to query capacity in high-risk decisions or where there were welfare concerns, so a risk-sensitive approach need not be seen as overly paternalistic. The drafted new MCA 2005 Code of Practice – derived after a recent governmental consultation – highlights the challenges when thinking about the presumption ([United Kingdom Government, 2022](#)). It draws a distinction between “considering” and “assessing” a person’s capacity status, giving a route to query legitimately a capacity status without violating the

presumption (at section 4.6 of the drafted code). This may not allay concerns about perverse drivers around use of the presumption to avoid offering assessment at all, which may need to be addressed via a systems-wide approach. Training and resource development might thus be directed to managing uncertainty by applying a risk-sensitive model of capacity which aims to respect autonomy, by maximising, for different gravities of decision, the chances of getting the capacity assessments right (Berens & Kim, 2022).

## **[Recruitment strategies used to enrol healthy volunteers in the first pneumococcal human infection study in Africa: Lessons from Blantyre, Malawi](#)**

[version 1; peer review: awaiting peer review]

Edna Nsomba \*, Anthony E. Chirwa \*, et al. Malawi Accelerated Research in Vaccines, Experimental Laboratory Systems (MARVELS) consortium

### *Abstract*

#### Background

Human infection studies (HIS) also known as Controlled Human Infection Models (CHIM) are a relatively new concept in African countries to clinicians, scientists, and communities alike. We have introduced HIS/CHIM studies to Malawi during the last four years by developing an experimental human pneumococcal carriage model. This CHIM was used to test the efficacy of a licensed 13-valent Pneumococcal Conjugate Vaccine (PCV13) against experimental nasal pneumococcal carriage. Traditional and digital recruitment strategies into this novel trial were explored.

#### Objectives

To describe various methods of recruitment in this first CHIM study in Malawi.

#### Methods

The clinical trial within the context of which these data were recorded was registered with the Pan African Clinical Trials Registry (REF: PACTR202008503507113) on 03 August 2020. The project was conducted at the Malawi Liverpool Wellcome Programme (MLW) in Blantyre, Malawi between April 2021, and September 2022. Source populations were college students and community members within Blantyre. Recruitment strategies included sharing study information in written or visual form, community sensitization meetings, snowball contacts (word of mouth from previous volunteers), branded clothing and participating in radio and television programs.

#### Results

299 volunteers attended screening clinic, of whom 278 were recruited. Sixty-six recruited volunteers (23.7%) were college students and 212 (76.3%) were from the community. Snowball word-of-mouth contacting was the most successful recruitment strategy, with 201 (72.3%) participants recruited using this method. 195 (70.1%) were men of whom 149 (76.4%) joined the study through snowballing.

#### Conclusion or recommendation

Using a variety of recruitment strategies led to successful recruitment in this novel controlled human infection study. Most participants were recruited through snowballing.
